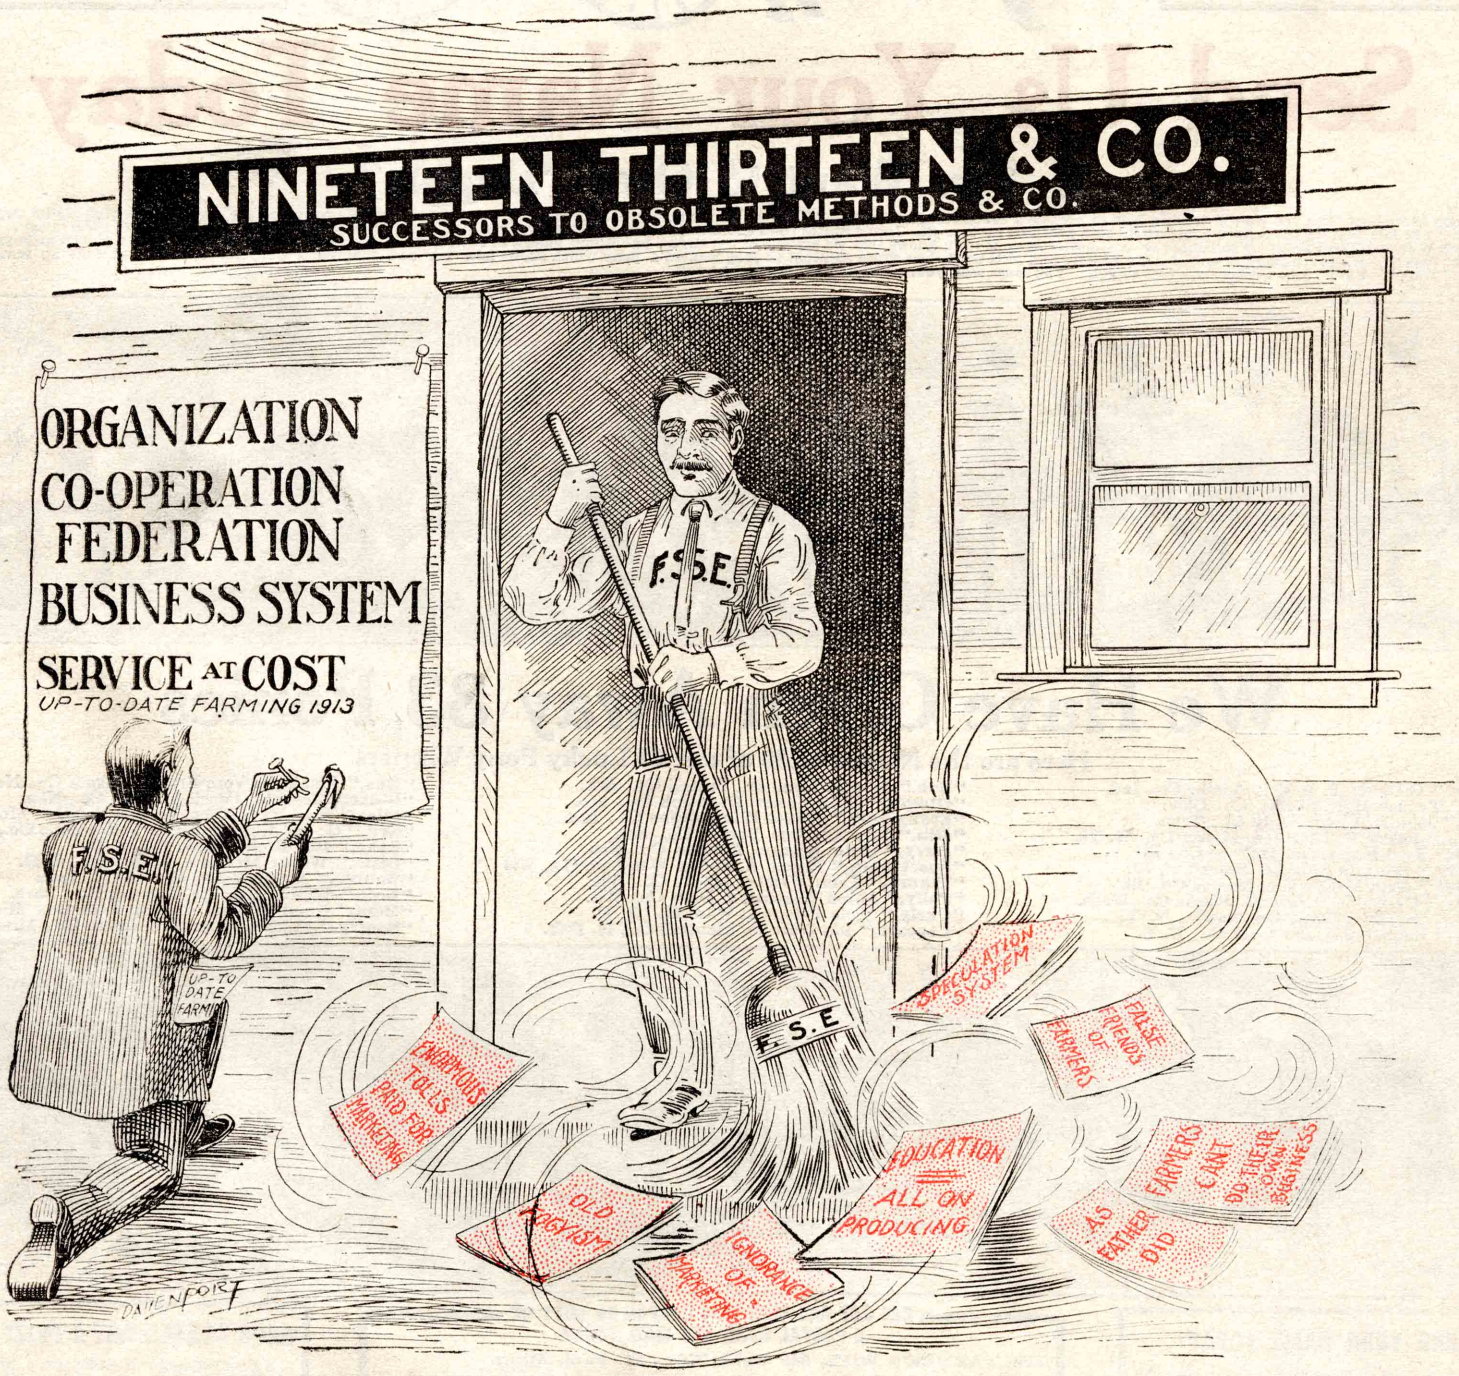
UP-TO-DATE FARMING

JANUARY 1st, 1913

Out With Old Market Methods, Up With the New



Do you reap with a sickle, or thresh with a flail?
No! You're more up-to-date; if you did you would fail.
Then why should old MARKETING METHODS prevail?

There is No Other Paper Like This in the World

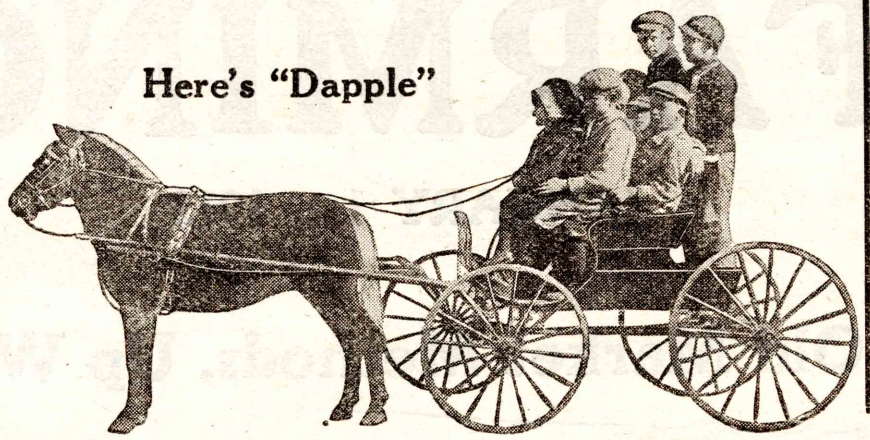
THIS PONY FREE!

WE WILL GIVE YOU OR SOME OTHER BOY OR GIRL THIS PONY. WITH COMPLETE OUTFIT, JUST AS IT LOOKS IN THIS PICTURE.

"DAPPLE"

"Dapple" is a beautiful three-year-old dappled-chestnut Shetland Pony 42 inches high, with Silver Main and Tail. He weighs about 300 pounds and is pretty nearly worth his weight in gold. Of the 83 Shetland Ponies we have given away to boys and girls we believe "Dapple" is the prettiest. In fact you very seldom can get a pony of this color. You may have seen lots of ponies in Circus Parades, but you never saw one prettier than this pony "Dapple" that we are going to give to you or some other boy or girl. We selected him out of 100 ponies at the famous Heyl Pony Farm, Washington, Ill., and you'd be the happiest child alive if "Dapple" were yours. Hitched up to his nobby pony wagon he will haul you and all your boy and girl friends that can pile in, just about as fast as you want to go. And when you are not riding or driving him he will play with you and you can teach him to come when you whistle, and lots of cute tricks. Didn't you ever notice what good times children have who own ponies and how pretty these cute little fellows look when trotting up the road? Everybody runs to the door and stops to look at a Shetland Pony going by. Can you think of anything you would like to own better than "Dapple?" Read this page through carefully and then send us your name and address at once.

Here's "Dapple"



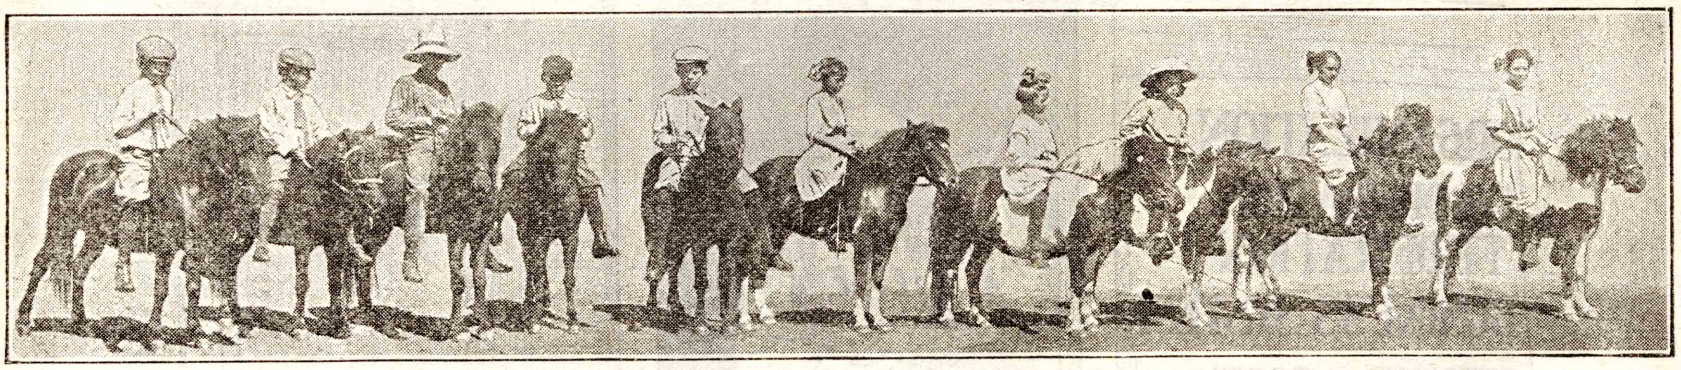
THE OUTFIT

And best of all we send free with "Dapple" the complete Pony Outfit just as you see it in the picture. Besides the Pony, the Pony Buggy and the Harness shown we send a Saddle and Bridle, which would make you the most complete outfit that money could buy. You could ride horse-back or take all your boy or girl friends driving everywhere. The pony wagon is just the most comfortable riding and easiest pulling we could buy for our purpose. We have given away so many that we know exactly what kind most boys and girls like. The handsome nickel trimmed harness looks just fine on "Dapple" and the riding bridle is imported and the saddle which we also send we had made to order for "Dapple." No child, no matter how rich his parents may be, owns a nobbier or more desirable pony and outfit than this one which we shall send free and all freight and express charges paid. This is surely the best chance you ever had to get a Shetland Pony, so if you haven't any and think you would like to have us give you this one, send your name and address to us right now so it will be sure to get to us quickly.

Send Us Your Name Today

If You Want to Own 'Dapple"

As soon as we hear from you we will tell you how to become a contestant for "Dapple." Don't let anybody persuade you that you cannot win this pony because our plan of giving ponies away is different from others. The fact that we have given ponies to 83 boys and girls all over the United States from the State of New York to the State of Washington already is proof that we give them away. We publish The Farmer's Wife and The Farmer. The banker or postmaster in your town knows that we are one of the largest publishing houses in the United States so we can well afford to give ponies to boys and girls to advertise our papers. We never heard of one of these 83 boys and girls until they wrote and told us they wanted a pony which shows how fair and square our pony contests are and that no matter where the winner lives "Dapple" will be sent without any cost to you. You must send your name and address right away.



We Have Given Away 83 Ponies

Here are the Names of 30 of our 83 Lucky Pony Winners

"**Roine,**" Clarence F. Busick, Adams Co., Ind.
"**Bob,**" Twylah Hart, Shelby Co., Ohio.

SEND YOUR NAME TODAY

Our ponies are given away so quickly that you will stand a better chance to get this one if you sit right down and write us a letter or a postal card or send the coupon opposite filled out with your name and address (either way will be all right). The work we require you to do to become a contestant for "Dapple" is something that any boy or girl who could drive a pony can do, and any child who becomes a contestant will win a fine prize, even if he fails to win "Dapple" which is the best prize of all.

CUT OUT AND SIGN THIS COUPON OR COPY ON A POSTAL CARD AND MAIL TODAY

THE FARMER'S WIFE, 549 Webb Bldg., St. Paul, Minn.

Please send me Certificate of Entry, and pictures of "Dapple" and tell me how to take care of Shetland Ponies. I haven't any Shetland Pony and want to own "Dapple."

Name.....R. F. D.....

P. O.....State.....

This Coupon is good for 1000 votes for "Dapple."

EACH CONTESTANT A PRIZE WINNER

All contestants will surely get a prize of their own choosing from a list which we will send them. Besides the Pony Outfit and Twenty-five Grand Prizes we shall offer Gold Watches, Base Ball Outfits, Gold Bracelets, Fountain Pens, Hand Bags, Flash Lights, Rifles, Shot Guns and dozens of other desirable prizes. If you become an enrolled contestant in this Pony Contest you can't lose. But don't let anyone persuade you that you can't win "Dapple" because you have the same chance as any other child.

Be sure to address postcard or envelope **THE FARMER'S WIFE** 549 WEBB BUILDING, ST. PAUL, MINNESOTA

The Farm-Mortgage-Bond Scheme

ON THE 20th of last November, H. C. Price, dean of the College of Agriculture of the Ohio State University, went to Hutchinson, Kas., to address the Kansas Agricultural and Industrial Conference in favor of the farm-mortgage-bond scheme the money power seems so determined to fasten upon the farming people of this country. The heads of agricultural institutions are thought to be great farmers, but they are not. Let us give them full credit for their sincerity of purpose, and for the great good they do in stimulating agricultural study and investigation, even in impressing the agricultural world with the importance of better farming; yes, and in directing the farm boys and girls in the paths of progressive agriculture along the lines of scientific research and application. But their knowledge is acquired from books and is largely theoretic. In matters of agricultural finance they get their information entirely from reports and statistics that are confessedly misleading and sometimes actually contradictory. Designing parties high up in finance, therefore, find it an easy matter to use these distinguished educational gentlemen, not corruptly, we are sure, but by means of misleading stitistics.

For instance, Dean Price, of the Ohio University, accepts the farm indebtedness of the country to total six billion dollars, and, like others who favor this measure, he assumes that the farmers need to borrow this sum annually to enable them to make their crops. But even with that entirely unwarranted assumption, his best figures promise no more than a saving by this scheme of $20 to the farm. If all this is true, as Dean Price argues it, could it possibly justify the placing of American homes and farms in bulk and in groups in the ultimate absolute control of the money power?

To show more clearly the purpose of this scheme as seen by its supposedly incorruptible advocates, we quote from the Ohio dean's address to the Kansas farmers:

The lack of capital is responsible for much of the poor farming, poor live stock and poor equipment found on American farms at the present time. Modern methods of improved agriculture mean more capital. The high price of farm lands calls for more intensive methods but this means the investment of more capital. Tile drainage, improved live stock, new buildings, silos and improved farm machinery mean more capital. The investment in the land is only the beginning of the outlay of capital necessary for the equipment and operation of a modern farm.

Private investors are not lacking to furnish all the working capital farmers can use if farm securities are made negotiable and put on the market secured by a farmers' organization of unquestioned financial standing.

That certainly does "Let the cat out of the bag." "Private investors are not lacking to furnish all the working capital farmers can use," but the securities must be so arranged that they are "negotiable and put on the market"—the miserable stock and brokerage market that is a curse to all the business and industrial interests of the country.

Again, Dean Price declares "there is no need for state and government loans to farmers. No, of course not. That would keep the farms out of the hands of the money lenders. The money power has obtained control of all other business, but farming, independent in itself and based on real estate values and the actual creation of wealth, has so far resisted all their schemes. But this plan, if adopted, will remove every obstacle, and place the lands under the same insidious control that now controls everything else, including the government itself. It will not be openly advocated by the money lenders, but by those whom the farmers have been taught to trust, advocates who have been deceived themselves or who are corruptly deceiving the agricultural classes. Public officials, however, may take a lesson from the recent election: People learn after a time, and when they do learn they act. They may well remember the words of one greater than they: "You may deceive all of the people some of the time, and some of the people all of the time, but you cannot deceive all the people all the time."

Not Supply and Demand

WE ARE glad to note that even such great publications as the Saturday Evening Post are awakening to the fact that in modern marketing supply and demand have little to do in fixing either the selling or the buying price. In the issue for November 23 the editor said: "Every few days farmers are solemnly warned against co-operating to control prices, on the ground that prices must be left to supply and demand." "The play of supply and demand," the Post continues, "has relatively little to do with fixing the price of anything." We quote further from the same editorial:

> Farmers are quite right in insisting upon the first and greatest factor—cost of production. Moreover, their co-operative plans, instead of flying in the face of the law of supply and demand, work in conformity with it. They propose to control fluctuations in price precisely by controlling the supply. Only that part of the supply that is offered on the market, or that buyers believe will soon be offered, affects price.

The distinguished writer might have gone even further, as we have often done, and shown conclusively that, no matter how great the quantity produced, only enough is allowed to reach the markets of consumption as will command the extravagant prices fixed by greed. The remedy will come only when the farmers co-operate in a sensible way to get their products directly to the demand by the shortest and cheapest route, and free from the control and handling that is purely and solely for profits. Farmers must produce a surplus if they have any money. Those who are not farmers must have that surplus if they live. These two classes do not live far apart. Why must it cost more to get it to the consumers than it costs to produce it with all the farmers' profits added?

How the Money Power Controls Business and Creates Panics

THE D. Rothschild Grain Company, with head offices in Davenport, Iowa, and elevators in Chicago, St. Louis, Omaha, Peoria, Sioux Falls and other cities, has gone into voluntary bankruptcy. Car shortage and the tightness of the money market are given as the cause for the failure. President David Rothschild said the company had an immense amount of grain in transit this fall, and the delay in delivery and inability to get money on the grain undelivered, compelled the liquidation.

Individuals, firms or corporations that do business on borrowed capital, no matter how large or prosperous their business, are at the mercy of the furnishers of the capital. These persons or corporations may at any time take advantage of any hold up of the business, or of anything the debtors may do that is displeasing to them, and demand payment of the money loaned, with an agreement among the combined capitalists that no other money shall be advanced; then bankruptcy is inevitable. Thus a combination of the money furnishing institutions of the country could precipitate a financial panic at any time, and the business world could do nothing to prevent it. If the farmers were working on borrowed capital, as some claim they are, they would be subject to the same merciless control, and attendant disaster. If the land bond and mortgage plan now urged in financial circles, was put into effect the farmers would then indeed be in the debtor class, and they would suffer in financial panics the same as the business enterprises that work on borrowed capital. In their case under the plan proposed they would not only lose their business, but their homes also. During past panics it has always been admitted that the farmers suffer less than the business people. The prices of their stuff decline, but their homes and farms remain. Under the mortgage-bond scheme the lands and homes would go together. Note how simple a matter may bring on the crisis. The great firm mentioned above was doing a big business and had an immense quantity of stuff, but a single hold up in transportation sent them to the wall.

The Corn Crop

TOO much is said about increasing the production of corn, and such strenuous efforts are made to do so, that it is well to notice all the features of that proposition. There is no question but that the corn yield per acre can be greatly increased in this country; but the three billion bushel crop that the farmers now produce seems to fully supply the demand at reasonable prices. After the demand for any product is supplied, each addition to the supply becomes a surplus, and reduces the price of the whole crop—we mean the price to the producers, for it has been time and again demonstrated that, under present systems of marketing, neither the price paid the producers nor the increase in production has any effect on the price charged the consumers.

We therefore, contend that the first essential to successful farming is to find a greater demand and increased consumption, and a marketing system that will find and supply the demand at equitable prices. We suppose that he who makes two ears of corn grow where but one grew before is a public benefactor, but he who finds a demand for the extra ear and gets it to that demand without taking all the grain and leaving only the cob, is a far greater benefactor.

The Makers of Wealth and the Accumlators of Wealth

IN ILLINOIS the bankers have a special association for co-operating with farmers and help them to produce bigger crops. The big trusts are doing the same thing. Less than a year ago Sears, Roebuck & Company, the big mail-order house in Chicago, gave a million dollars toward farm demonstration work to result in greater production. The International Harvester Company will put a million dollars into what it calls a service bureau in the interest of agriculture, and has employed Prof. Holden, one of the greatest farm teachers of the world, as the head of the bureau. This proposition was elaborately treated in a previous issue. The so-called American Agricultural Chemical Company, sometimes not inappropriately called the American fertilizer trust, has hired, so we are told, one of the biggest soil experts of the country, Dr. Wheeler, of the Rhode Island Agricultural College, to establish a bureau to examine the soils for the patrons of the fertilizer company and tell them the kind of fertilizers the soils most need.

All this is entirely independent of the proposition that the government and the states shall expend millions of dollars to employ experts to go into the farming communities and teach the farmers better methods of farming.

Everybody wants to help the farmers. But how? To induce and enable them to produce more stuff. And all in spite of the fact that, for a number of years, production has constantly increased until the value of last year's crop exceeds nine billion dollars in spite of falling farm prices.

But we admire what these people are doing. The farmers deserve help and they need it. But these great appropriations of money are not pure benevolences. The Illinois bankers, as well as bankers everywhere, are accumulators of wealth. That is their business. The farmers are the creators of wealth, and the more crops are grown the better their chances to accumulate wealth. The mail-order business is almost entirely with farmers, and the more farmers have to sell the more they are likely to buy. Sears, Roebuck & Company are "onto their job," and they are not a whit to blame for expecting more to come back than they give out. The International Harvester Company could not exist without the patronage of the farmers and they very reasonably conclude that the more farmers produce the more machinery will be required to take care of it, an entirely reasonable business conclusion, and what they are doing is a legitimate business action. The trade of the fertilizer company is wholly with the farmers and those who produce from the soil. The work proposed by that company will necessarily result in the increased use of fertilizers, and principally of those behind the bureau that is thus instructing them.

It is so of the railroads that are joining in this work. Every increased bushel and pound makes more work for them—increased returns with very little increase in expenditure. This, too, is legitimate business, and, while we may see the self side of it all, it is commendable.

But are these great interests working wisely for the accomplishment of their purposes? They do not wish to exchange their stuff for farm products. They sell for money, and the way farmers get money is to exchange their products for money. The amount of money they get does not depend so much upon the quantity of surplus products they have as it does upon the price they receive. These great enterprises ignore the fact that the greater the production the lower the price. Unless the demand is increased as production increases there must be glutted markets and disaster. Under the present marketing system the supply finds only a portion of the demand, and it comes to that which it reaches at profit made prices that reduces consumption. If these great enterprises would devote a portion of their appropriated millions to establishing a system that would find the demand and supply it by the most direct way, they could thus increase consumption wonderfully, and maintain equitable prices to the farmers. The farmers would then get money for their stuff, and increased production would then mean increased cash, and increased ability to do business. Why don't they establish bureaus of marketing as well as bureaus of production?

Prefers the Cartoons

"Anent a choice of cartoons or farm scenes as frontispieces for our publication, I prefer the cartoons." So wrote C. E. House, of Marion, N. C. He gave his reasons as follows:

They afford a wider range of possibility in conveying pregnant meanings to the readers. They are more in line with modern publications of the farm paper, magazine and newspaper class. To the greater number of your readers, farm scenes are more or less familiar. Cartoons with 'a moral to point, or a tale-adorn' are not. The cartoon appeals to all conditions of men while a farm scene is that and nothing more to all but the observant, artistic few. You can adapt a cartoon to any department of your publication or to any kindred or associate subject; you can start a train of thought or stifle a misdirected effort; it needs few lines and no frame; is good for a new idea almost each time you look upon it; it is a maker or breaker; is elastic, bountiful and redolent; a little of something to some and much to many men; in all around usefulness it far exceeds the mere farm scene and finally it entails the least preparation and execution from the pecuniary and mechanical point of view—and is Up-to-Date."

Farmers May Pool their Stuff for Fair Prices

ONE of the higher courts of Kentucky has decided, in a clearly defined case, that farmers may combine to secure equitable prices for their products, and in doing so they violate no law, but rather are encouraged and sustained by the law. The court goes even farther than that, and holds that, when farmers agree to so pool their products to secure a specified price, they must carry out that agreement or become responsible for any damage that may result to the Society for their not doing so.

Harry Gillaspy pooled his crop to the Burley Tobacco Society, agreeing in the obligation signed, to make the society the "sole agents for the purpose of receiving, commingling, handling, warehousing, inspecting, insuring, grading and selling all of said tobacco in such manner and on such terms as said Burley Tobacco Society may prescribe, pursuant to its charter and by-laws." The contract also provided that should any one signing such agreement, afterwards sell to any other party he should pay 20 per cent. of the value of the crop to the Society as damages. Gillaspy sold his crop to another buyer for $2,400, and the Society sued him for the 20 per cent. of that sum.

Gillaspy contended that the contract did not bind the Society to any act and was without consileration. But the Appellate Court says that the provision for 20 per cent. of the value of the crop was intended as liquidated damages, and not as a penalty; that the fact that other contracts with other growers were contemplated was a sufficient consideration, and that there is nothing against the public policy of the state in preventing growers to combine to secure a fair price for the products of their farms.

The court quotes from a Kentucky statute and from decisions of the Kentucky courts and says that the public policy of Kentucky as disclosed by its Constitution and laws are as much opposed to monopoly as Indiana, and that the laws of Kentucky promote the Burley Society and the decisions of the state support it, and it will be presumed until otherwise shown that the purpose of the Society is merely to obtain a fair price for the tobacco and not to create a monopolistic and fictitious price, but was intended as a defense against the aggression of the monopoly of the American Tobacco Company. Judgment was rendered in favor of the Society.

We treat this case thus fully to show farmers in general that they are not helpless. The courts sustain them, and they need not be victimized by combined buyers. But to thus secure their rights and fair treatment they must be organized, and they must stand by their organization.

The Proof of the Pudding

THERE are men in the United States who are immensely rich, and all such are now or have been, the chief beneficiaries of some great industrial or commercial enterprise. Some of these men are making liberal and benevolent uses of their accumulated wealth, while others are hoarding as closely as ever, and are making as strenuous efforts for continued accumulation. Of the benevolent class we mention two, Andrew Carnegie and John D. Rockefeller. Mr. Carnegie has appropriated for benevolent purposes the following sums of money:

Libraries	$ 52,000,000
Pensions for college professors	22,000,000
Small colleges	20,000,000
Hero funds, peace funds and miscellaneous gifts	113,000,000
Carnegie corporation	125,000,000
Total	$332,000,000

The following sums stand to the credit of John D. Rockefeller:

General education fund	$ 52,000,000
Chicago University	25,000,000
Small colleges	23,000,000
Miscellaneous gifts	74,000,000
Total	$175,000,000

These donations or gifts amount to almost incredible sums of money. In the earlier days of the Republic they would have been impossible sums—no citizen possessed so much as the lowest of the above tabluated gifts. These givers began life in moderate financial circumstances. In fact they were both poor boys. They must be given credit, therefore, for pluck, enterprise, energy and industry, coupled with ability to save and accumulate. And the gifts they have made prove that they are not meanly selfish. Let all these things be said freely and to their credit.

But these vast sums of money thus so freely given away, mere drops, as we have reason to suppose, from their total accumulations, prove other things also. The proof of the pudding, as we facetiously, sometimes sarcastically say, is in the eating. Andrew Carnegie was at one time at the head of the great United States Steel Trust, and is yet, we suppose, a prime beneficiary of it. The steel trust manufactured and controlled the sale of articles the masses of the people could not do without, and that they must buy at prices fixed by the trust. John D. Rockefeller was head of the Standard Oil Company, and controlled the production and sale of a commodity that lighted every country and village home in the nation, and many homes in the towns and cities. Without that commodity the old time grease lamp, candle or darkness must have been in the homes of the masses of the people.

These vast accumulations, then, were gathered from the people. It is not a question whether the people were benefited by the commodities thus furnished. The question is, were the people required to pay too much for them. The personal accumulations are made of the profits derived from the sale of the goods, not from the sums received. That one man in only a part of a lifetime can thus accumulate enough of profits to enable him to give away $332,000,000, and another $175,000,000, is proof conclusive that these necessary commodities were sold too high. Those are exorbitant gains, and cannot be otherwise considered. That these vast sums are now given to good objects is no excuse. The amounts that can thus be spared should have been left from the beginning with the masses of the people who were compelled to contribute them in the purchase of commodities necessary to their success and comfort. And these are but two cases in an aggregate. Other vast fortunes have been accumulated in the Carnegie and Rockefeller monopolies of other commodities just as necessary to the public welfare. We need not particularize. The reading public knows of

(Continued on Page 6)

Crop Prospects *and* Market Reports

Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

THE Department of Agriculture is-issued its final report for the 1912 crops on December 16. This report contained estimates of the acreage, production and value (farm values) of the important farm crops as of December 1, 1912, with comparisons with 1911 and 1910.

The crops included in the report are corn, wheat, oats, barley, rye, buckwheat, flaxseed, rice, potatoes, hay and tobacco. The total value (value at the farms) is placed at $3,911,499,000, and this is said to be $50,531,000 more than the value of the 1911 crops. We will not go into a thorough analysis of the report now, but expect to give it further attention. We will, however quote the farm values given for the various crops so our readers can decide for themselves whether the report is correct or not. The prices are as follows: Corn, 48.7c; winter wheat, 80.9c; spring wheat, 70.1c; oats, 31.9c; barley, 86.9c; rye, 66.3c; buckwheat, 66.1c; flaxseed, $1.15; rice, 93.5c, and potatoes, 50.5c per bushel; hay

No. 1 Spring Wheat Priced 30 Cents Under No. 2 Red Winter is Like Highway Robbery.

$11.79 a ton, and tobacco, 10.8c a pound on December 1, 1912.

The total of the nine crops measured by bushels for 1912 is 6,025,861,000 bushels, for 1911, 4,621,073,000 bushels. The hay crop of 1912 is 72,691,000 tons, for 1911, 54,916,000 tons. The tobacco crop of 1912 is given at 962,855,000 pounds, for 1911, at 905,109,000 pounds.

The seven crops for 1912 are 1,404,788,000 bushels larger than in 1911, the hay crop is 17,755,000 tons larger and the tobacco crop is 47,746,000 pounds larger. If the report is correct, then these greater yields over 1911 are valued at $50,531,000, of 3½ cents a bushel, not counting the hay and tobacco.

Refering to the government crop report Bradstreets says:

Large, in most instances record, crops or cereals, other foodstuffs and tobacco have not resulted in much greater return to the farming interests as a whole, judging from the recently published returns of the Department of Agriculture. The total aggregate yield in bushels of six cereal crops was 29.5 per cent. greater than in 1911, but the money return from the same was actually 1 per cent. less than in 1911, a year of shortened yields. The money value of twelve leading crops, cotton and sugar not included, was only 1.2 per cent. greater in 1912 than in 1911. This was owing to the greater proportionate decrease in prices, which are 8 to 40 per cent. lower.

Complaints of dry weather have reached us from several sections, particularly from the southwest. If a dry 1913 follows the wet 1912 it would be only maintaining the rule.

The visible supply of wheat made a big jump, but it gained nearly as much in the same period last year. It is still nearly ten million bushels lower than a year before, but over fifteen million bushels more than two years before. It is too much and word should be passed around in all neighborhoods, particularly in the spring wheat states, to market no more for a while. The price of winter wheat is 7 to 9 cents higher than two weeks before, spring wheat is practically unchanged. Spring wheat is selling at 30 cents a bushel less than winter wheat on the Chicago market, while a year ago it was 6 cents a bushel higher.

Notwithstanding the great crop of oats, gowers have controlled it wonderfully well, kept the visible small and actually the last two weeks it has decreased near two million bushels.

The cotton crop estimate for December is 13,820,000 bales. Last year the final estimate was 15,692,701 bales.

Potatoes have been put up another notch. The November estimate was 414,289,000 bushels and the December estimate is 420,647,000 bushels. Marketing of potatoes is still much lighter than a year ago, which means that there must be an enormous quantity of potatoes back in the country.

The following tells the balance of the market story:

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on December 14, 1912, with comparisons, are shown in the following table: (The sign — before figures means decrease, X indicates increase.)

	Dec. 14 1912 Bushels	Change from 2 wks. before Bushels	Change same period last year. Bu.	Change from a year before Bushels	Change from 2 yrs. before Bushels
WHEAT	68,961,000	X5,695,000	X 4,229,000	— 9,693,000	X 15,248,000
CORN	3,957,000	X 484,000	X 60,000	— 1,819,000	— 498,000
OATS	13,218,000	—1,768,000	—1,821,000	—10,400,000	—10,511,000
BARLEY	5,400,000	— 669,000	— 207,000	X 689,000	X 2,456,000

The visible supply of wheat in Canada on the same date was 43,504,000 bushels. This is only 29,000 bushels more than two weeks before and 7,966 bushels more than a year before. The visible supply of oats was 6,777,000 bushels on the same date, which is 969,000 more than two weeks before and 1,726,000 bushels more than a year ago.

CLOSING PRICES OF CASH GRAIN

Cash grain closed in the leading markets on December 23, two weeks before and a year before, as follows:

WHEAT, No. 2 RED	Dec. 23	2 wks before	A Yr. before
Chicago	1.09½@1.10¼	1.00 @1.03	97
St. Louis	1.04 @1.09½	1.05 @1.08	98
Kansas City	1.01 @1.04	97½@1.00	96
Cincinnati	1.12 @1.14	1.07 @1.09	98
New York	1.08 @1.09	1.06 @1.07	96¾

Minneapolis—No. 1 hard spring, 81⅛c; No. 1 northern, 82@83½c. Two weeks before, 82½c and 80½@81⅝c respectively. A year before, $1.03⅜ and $1.03⅜ respectively.

CORN, No. 2 White			
Chicago	46 @47	46 @46½	60½
St. Louis	48½@49½	47	70
Kansas City	46½	46 @46½	63½
Cincinnati	52 @53	50 @52	66
New York	55	53½	69¼
OATS, No. 2 WHITE			
Chicago	35¼	34½@35	50
St. Louis	34@34½	34½@34¾	49¾
Kansas City	34½@35	34 @34½	49
Cincinnati	37 @37½	38 @39½	51
New York	39½@40		

FUTURE GRAIN PRICES

Chicago grain futures closed on December 23, and two weeks before as follows:

WHEAT—December, 86⅝c; May, 91⅞c; July, 88⅝c. Two weeks before, 83½c; 89⅛c and 86⅛c respectively.

CORN—December, 48½c; May, 49c; July, 49¾. Two weeks before, 47½c, 47⅞c and 48¾c respectively.

OATS—December, 32⅞c; May, 33⅛c; July, 33⅜c. Two weeks before, 31½, 32⅝c and 32⅝c respectively.

ADVICE—We advise against selling grain at present prices. We believe they will be higher all around. Particularly we implore spring wheat farmers to quit marketing awhile. They certainly don't know that they are being robbed of 30 cents a bushel on every bushel of wheat they are selling, and in broad day light, too. Note the difference in prices of winter and spring wheat.

COTTON

New York, December 23.—Cash cotton closed as follows: Middling upland, 13.10c; middling gulf, 13.35c.

The price of cotton is 35c a cwt. higher than two weeks before. It is $3.75 a cwt. higher than a year before.

ADVICE—If cotton can be held on the farm or without expense we recommend it. We have doubts though whether it will justify storing now to wait for the minimum price, 15c.

LIVE STOCK

Indianapolis Stock Market, December 23

CATTLE—Range of day's paying prices for steers ..... $5.50@7.25
Range of day's quotations for steers..... 5.50@9.50
Good to choice steers, 1,300 lbs. and up 8.75@9.50
Good to medium steers, 900 to 1,250 lbs... 6.50@7.25
HOGS—Range of day's paying prices ..... 6.25@7.50
Range of day's quotations ..... 6.50@7.60
Best heavies, 310 lbs. and up..... 7.45@7.60
Common to choice lights, 130 to 230 lbs. 7.30@7.50

The price of steers is a shade lower than two weeks before. The price of hogs is from 25c lower to $2 a cwt. higher than two weeks before. The extreme high is on low grade stock.

CHICAGO PRODUCE MARKET

December 21, 1912

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last Week	Last Year
Monday	70	110	78
Tuesday	46	50	70
Wednesday	35	52	23
Thursday	30	30	35
Friday	40	35	40
Saturday	42	40	61
Total, 6 days	266	347	307

Market held steady today and had a more buoyant undertone at the prices. Buyers took hold freely, and colder weather led to the expectations of a stronger market.

Sales reported were: Wisconsin, in bulk—2 cars at 43c, 2 cars at 45c. Wisconsin, sacked—3 cars at 45c. Minnesota Russets in sacks—2 cars at 42c.

Per. bu. bulk or sacked, Wisconsin, Burbanks, Kings or Rurals, ordinary to good ..... 40@45c
Fancy Russets, possibly a shade over.
Minnesota, round white, bulk or sacked ...40@45c
Minnesota, Russets, in sacks ..... 48@52c

The price is unchanged to 3c a bushel lower than two weeks before.

ADVICE—Our recommendation is to sell potatoes now.

NEW POTATOES—There are a few Bermudas on sale, not many yet. Quoted as follows:
Per barrel, No. 1 ..... $7.50@7.75
No. 2 ..... 6.75@ .

SWEET POTATOES—There is a good trade and supply is liberal. Latter fact makes it easy for buyers to provide for their needs. The demand is for choice goods. Trade is mainly in Illinois. Such as are not fine, and these are more or less faulty or not well packed, rule easy and dull.
Barrels, Illinois, fair to good ..... $2.50@3.00
A few well known brands shade over.
No. 2 ..... 1.25@1.50
Hampers, Jerseys, outside very fancy ..... 1.25@1.40
Delaware ..... 1.00@....
Illinois, choice ..... .90@1.00
Some fancy brands shade over.
Not clear skin or not straight packed ... .75@ .
No. 2 ..... .50@ .60

ADVICE—Investigate the markets, select the best and sell. We believe any good offer that makes a profit should be accepted. We do not look for much improvement in prices.

BEANS—Are ruling slow. This is nothing unusual for this season of the year. There are plenty of Pea Beans below fine quality to be had, but there are not many really fine goods due to too much rain. The other kinds of beans do not cut much figure at present. Some Red Kidney are selling, but Brown Swedish have been without demand for some time. Quotations range as below:
Pea Beans—
Hand-picked, choice $2.30@2.35
Prime ..... 2.15@2.25
Stock Faulty ... 1.90@2.00
Mediums nominally about same as pea beans.
Red Kidneys, choice..$2.35@2.50
White Kidney ..... 2.85@3.00
Brown Swedish, long, nominal ..... 1.50@2.00
Round ..... 1.75@ .
Limas, per 100 lbs. ... 6.50@ .

Pea beans are 25 to 30c a bushel lower than two weeks before. Red kidneys 10c a bushel higher; limas 25c higher, and other kinds unchanged.

ADVICE—We do not look for much change in price unless because of speculation. Gradual marketing is advised.

HAY—Receipts, 1,528 tons; Demand fair and choice grades firm.
Choice Timothy Hay .$19.00@20.00
No. 1 Timothy ... 17.00@18.00
No. 2 Timothy ... 13.00@14.50
No. 3 Timothy ... 10.00@12.50
Kansas and Oklahoma Prairie, choice .... 15.00@15.50
Timothy hay is 50c to $1 a ton higher than two weeks before. We advise gradual marketing, being careful to get full value.

STRAW—Rye straw quotable at $8@8.50. Oat straw at $7@7.50. Wheat straw, $6@6.50.
No change in prices of straw.

BROOMCORN—For good grade of corn there is a steady market, at the same time it is weak and dull for common. Plenty of the latter to be had.
Per ton, Illinois corn, no nice quality offered ..... $120.00@130.00
Oklahoma ..... 60.00@100.00

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	2,591	1,946	1,535
Tuesday	2,585	3,180	1,890
Wednesday	1,944	2,035	1,696
Thursday	1,544	1,872	1,441
Friday	1,669	2,969	1,886
Saturday	1,924	1,569	1,641
Total	12,257	13,571	10,089

Receipts April 1, 1912, to Dec. 21, 1912, 2,788,444 cases
Receipts April 1, 1911, to Dec. 23, 1911, 2,431,529 cases
Receipts April 1, 1910, to Dec. 24, 1910, 2,766,276 cases

For fresh eggs the feeling was firmer and for storage eggs the market was steady.

Prices for fresh eggs cover a very wide range, depending on the quality. Many lots come with stale eggs mixed in and these are always handled to the disadvantage of the shipper. The two grades should be kept separate.

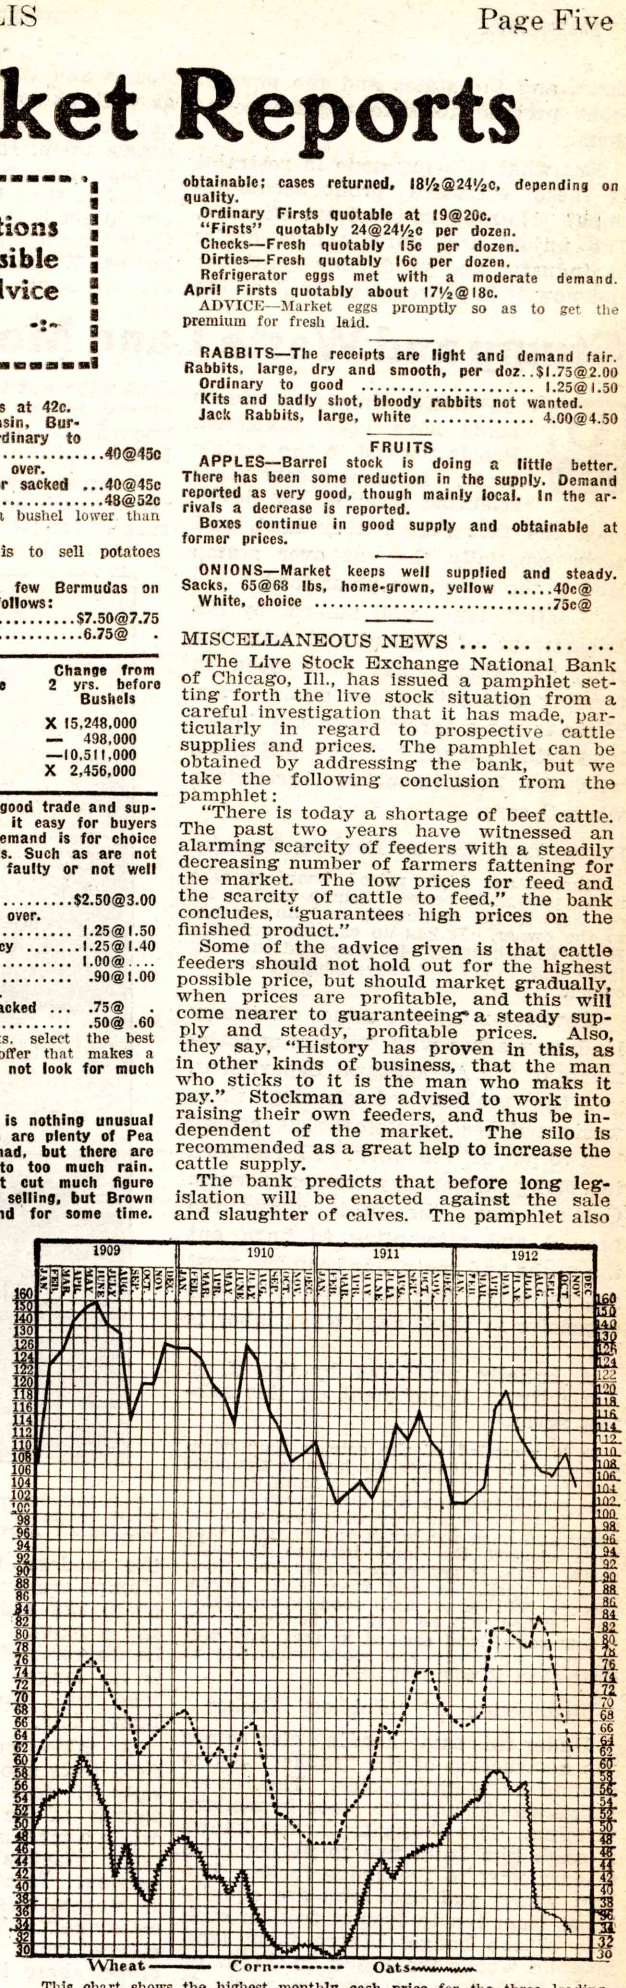
Miscellaneous lots—by this is means eggs as they arrive from the country—cover a wide range. If a lot runs largely to new laid eggs a shade more is obtainable; cases returned, 18½@24½c, depending on quality.
Ordinary Firsts quotable at 19@20c.
"Firsts" quotably 24@24½c per dozen.
Checks—Fresh quotably 15c per dozen.
Dirties—Fresh quotably 16c per dozen.
Refrigerator eggs met with a moderate demand.
April Firsts quotably about 17½@18c.
ADVICE—Market eggs promptly so as to get the premium for fresh laid.

RABBITS—The receipts are light and demand fair.
Rabbits, large, dry and smooth, per doz..$1.75@2.00
Ordinary to good ..... 1.25@1.50
Kits and badly shot, bloody rabbits not wanted.
Jack Rabbits, large, white ..... 4.00@4.50

FRUITS

APPLES—Barrel stock is doing a little better. There has been some reduction in the supply. Demand reported as very good, though mainly local. In the arrivals a decrease is reported.
Boxes continue in good supply and obtainable at former prices.

ONIONS—Market keeps well supplied and steady.
Sacks, 65@68 lbs, home-grown, yellow .....40c@
White, choice .....75c@



This chart shows the highest monthly cash price for the three leading grains at Chicago, for a period, 1909 to October, 1912, inclusive. The figures on right and left margins are prices in cents. The lowest prices for November were as follows: Wheat, 98c; corn, 46¼ cents and oats, 33 cents. This chart will be continued.

MISCELLANEOUS NEWS ... ...

The Live Stock Exchange National Bank of Chicago, Ill., has issued a pamphlet setting forth the live stock situation from a careful investigation that it has made, particularly in regard to prospective cattle supplies and prices. The pamphlet can be obtained by addressing the bank, but we take the following conclusion from the pamphlet:

"There is today a shortage of beef cattle. The past two years have witnessed an alarming scarcity of feeders with a steadily decreasing number of farmers fattening for the market. The low prices for feed and the scarcity of cattle to feed," the bank concludes, "guarantees high prices on the finished product."

Some of the advice given is that cattle feeders should not hold out for the highest possible price, but should market gradually, when prices are profitable, and this will come nearer to guaranteeing a steady supply and steady, profitable prices. Also, they say, "History has proven in this, as in other kinds of business, that the man who sticks to it is the man who maks it pay." Stockman are advised to work into raising their own feeders, and thus be independent of the market. The silo is recommended as a great help to increase the cattle supply.

The bank predicts that before long legislation will be enacted against the sale and slaughter of calves. The pamphlet also goes into the matter of increasing the fertility of the farms through feeding cattle. As a final word, the pamphlet says: "Get in the stock business. There was never a better time. Talk to your banker—he will help you start. There are no better loans than cattle loans. Don't worry about the markets—the man who loses is the speculator. Feed your stock, ship when it is ready to market—be generous to the earth which yields you her harvest and a sure and rich reward will be yours."

The Department of Agriculture has already begun to "bear" the wheat prices on the strength of the prospects of the 1913 crop. For instance, on the basis of present indications, the crop of winter wheat is estimated at 572,430,000 bushels, against 390,000,000 bushels estimated for the harvest of this year. But we must remember that there are many slips between the government's estimate and the harvest.

them, and the states and the government pretend to take cognizance of them.

But what is being done in restraint of these excessive profit accumulations? Nothing in the least effective. The unjust and unreasonable drafts on industry and production continue; and now it is proposed to fix it so the homes and lands may be drawn upon as well, as so long have been the soil and labor created necessaries of life drawn upon. It is proposed to let the farmers have back some of the money that has thus been taken from them, but to get it they must join with their their neighbors in pawning their homes. We hope the American Farmers will never do it.

Stump and Waste Land Most Valuable

ON FORMER times the stump lands have been neglected. People flocked to the prairie lands. In more recent years scientific farming has developed the fact that timber land, and more especially the cut over stump land is the richest in plant food.

"Loafer" land, well named, by the Department of Agriculture, tells the story of what might have been in farming better than any other terms. There is not a farmer with any loafer land (stump land) but who will agree with the Department of Agriculture when it says:

Stump Land Has no Earning Capacity

Stumps are high priced boarders who never pay their board. Stump land is an eye sore to the community and an expense to the owner. It has no earning capacity. It is "dead-heading" its way and the way leads only to the impoverishment of the owner.

However much the owner of stumpy land may agree with the strong statements of the Agricultural Department, yet the problem of clearing these waste patches heretofore has caused him to put off the work. He has seen too many farmers try too many ways. Cutting away the parts above the ground and attempting to burn out the grubs and roots, has been the most general way. But this plan is far too expensive in these days when labor is high.

A bulletin published by the U. S. Agricultural Department on this subject says:

It is recorded of the ostrich that when frightened it will bury it's head in the sand and imagine that it is hidden from the outside world because it's own view is shut off. It is the same way with men who cut away and burn the brush and imagine they have cleared the land because it looks clean. This is generally a mistake. Such land is untillable and from each stump, sprouts will start and soon innumerable new bushes will be making headway. In a few years land cleared in that way will be more unsightly and more expensive to clear than it was originally.

Distruction of "Robber" Hedge

Under this same heading also comes the destruction of the "robber" hedge around many grain fields. The robber hedge should have no place in modern farming. The observing farmer knows it costs him from five to fifteen rows of corn next to the hedge fence. The hay, wheat and oats crop are equally short from ten to twenty feet on each side of the hedge. Where farm land may be worth from $50 to $150, or even $200 an acre, such a waste is poor economy and no business farmer should allow it.

Losing an acre to every quarter mile of hedge, four acres of waste land to every mile is a constant yearly drain that should be allowed no longer. There is the interest on money invested, the loss in income from land which would otherwise be very productive. A conservative estimate has been made of $100 wasted each year for every mile of "robber" hedge.

The Problem Solved

The waste of yesterday need no longer continue. The American inventive genius has given us a means by which we may pull the stumps, roots and all as well as the "robber" hedge at very small expense and bring these waste lands to cultivation. We thus wipe out for all time the loss and extravagance from the high priced "boarders" who never pay their board.

A great revolution in the last few years has been made in the manufacture of land clearing machinery. With the modern type of stump pullers, stumps are pulled at the rate of from 50 to 200 a day, using only two men and a team. Hedges and bushes may be disposed of still more easily. There is no longer an excuse for the rich land with the high priced boarders laying idle.

A table worked out from actual field tests shows that a machine with only 50 feet of cable will pull one-fourth of an acre without moving, while a machine with 200 feet of cable pulls practically three acres at one setting. To a busy farmer whose time is money, this is an item of no small consequence. When three acres can be cleared with one setting of the machine, there is waste of neither time nor energy.

The "loafer land" is being cleared today at a minimum cost with modern machinery.

The ease and practicability with which this work can be done with up-to-date machinery is shown in the illustration accompanying this article, which were made from actual photographs, kindly furnished to us by the Hercules Manufacturing Company, 760 Twenty-first street, Centerville, Iowa.

Our readers are asked to think about their own stumps and robber hedges. Apply this suggestion in this article to yourself—to your crops and pocketbook. It is a matter of business. Stumps can be pulled at odd times at comparatively small expense. Then the land will be in condition to get busy and make money for you.

RECLAIMING THE WASTE LAND
THE MODERN TYPE OF STUMP PULLER IS MADE OF STEEL, WHICH LIGHTENS THE WEIGHT WITH INCREASED STRENGTH. THIS ILLUSTRATES A TRIPLE POWER TYPE WHICH IS GENERALLY ADMITTED TO BE THE BEST AND SPEEDIEST.

Smile Awhile

Willing to Contribute

Benevolent Solicitor.—Good morning, madame; I am collecting for the Drunkards' Home.

Mrs. McGinnis.—Sure an' I'm glad of it. If ye'll come around in the mornin' airly, before he has toime to git away, ye can git me husban'.

Putting Things On

Frank.—Say, Billie, my papa is going to buy a new horse and put an addition on our stable.

Billie.—Hush up. Your papa is not in it. My papa is going to buy an automobile and put a mortgage on our farm.

Quite Like It

Little Bessie, who had just passed a blacksmith shop where a horse was being shod, rushed into the room where her mother was, and exclaimed:

"Oh, mama, I have just been to the place where the make horses!"

"What makes you think that?" asked her mother.

"Why, mama, I know it," declared the little one excitedly, "they had a horse nearly finished, and were nailing on its hind feet!"

Too Little to Not Go

The Preacher.—Well, Jimmie, my boy, do you go to church every Sunday?

Jimmie.—Yes, sir, I'm not big enough yet to stay away or go anywhere else.

Felt Encouraged

Old gentleman, passing a pool where a little boy was patiently fishing.—Well, my little man, how many fish have you caught?

Little Boy.—When I catch this 'un I'll have one.

A Plain Fact

Johnnie was badly puzzled over a problem in his lesson, and his teacher helped him solve it. "Now, Johnnie, said she, "do you believe two heads are better than one?" I do," answered Johnnie, "for if you had two heads you could get a steady job in a show and make lots of money."

Some One Had Been Careless

Teacher—Bunny, what is wrong with the sentence: "The horse and cow is in the garden?"

Bunny, after some earnest study.—I guess somebody left the gate open.

One Place or the Other

Dr. Bragg.—Mrs. Bint, I have not half as many patients as I had last year; where do you suppose they have gone?

Mrs. Bint.—The Lord only knows, but we must hope for the best.

Williams—Many people seek out politicians just because they have axes to grind.

Billiams—And in doing so they take an awful chance on losing their axes.

Mr. Dooley on New York

"Good mahrnin', Hinnessey."

"Good mahrnin," Mister Dooley. I s'pose ye've got yer Chrismus prisints all shpread out over yer parler tayble an' overflowin' into th' hall."

"Nivir a bit iv it, Hinnessey, nivir a bit iv it. All th' Chrismus prisints I wanted I didn't git. I had me ould harrt set on a dozen aigs roight frish frum th' country, an' what did I resave? A pair iv carpit shlippers with roses on th' toes an' a handkerchiff aroun' it. Hinnessey, I'll think a whole lot more iv me nose than I do now before I'll ivir use thot sinterpace f'r such base purposes."

"Do ye ivir iggspict t' rayulize yer iggspictashuns?"

"Nivir, Hinnessey, until we get co-operashun. Why, do ye know that New Yark's bill f'r wan year f'r aigs, caffee, milk, petaytees, onyuns, mate, poultry, an' cabbageses wus fahr hoondrid an' sixty-fahr millyun dollars, did ye know that, Hinnessey?"

"I nivir avin dramed iv such a thing, Mister Dooley."

"Will, sir, out iv that th' fahrmer resaved fifty-noine per sint; th' railroads foive an' a half per sint; an' th' cost iv sellin' an' profits an th' prodoocts wus wan hoonderd an' sixty fahr millyun dollars, or thoirty-foive an' wan half per sint. It's a disgrace, I till ye, Hinnessey, a disgrace to th' city iv New York."

"Will, what are they to do about it?"

"Inaugurate a scientific systim iv marketin' an' ye'll find New York City savin' at laste sixty millyun dollars iv'ry year. That's wanfifth iv the total amount th' projucer resaves f'r his products. Twilve per sint iv th' total amount th' consumer pays is paid to make up f'r pure waste in marketin' methods. If this kapes on, th' paypul iv New York will have to do loike th' sassiety wimmin done in Phillydilphia."

"What did they do there?"

"They wint into th' aig business an' sold aigs f'r twinty-fahr sints in th' winter toime. What do ye think iv that, Hinnessey?"

"That's moighty foine, sir."

"It is that, an it's done me more good than if some wan iv me friends had bought me a highly mortgaged autymobeel f'r Chrismus. Happy New Year, Hinnessey."

UP-TO-DATE FARMING

Production and Marketing

WHAT'S IN A FARM NAME

EVERY good man and woman has a cherished memory of the old home where childhood's days were spent, and if that old home was on a farm that farm should have a name that will distinguish it from all other farms of the country.

Nearly every other business house, factory or firm has adopted a name and a credit is established. Every farm is worthy of a name, and every farmer can make a reputation and establish a credit for his farm and its products throught intelligent, careful study and the adoption of approved modern methods of procedure.

A well chosen name lends dignity to a place and is a sort of trademark which distinguishes it and its products; it characterizes its owner as a man of pride and stimulates all who are interested in it or its products to do and to be the best.

We believe that a well selected name will furnish an incentive for better farming; that all implements, tools, vehicles, crates and products whenever possible should have the name of the farm indelibly stamped upon them; that it should adorn every entrance to the farm and be printed upon all stationary used on the farm. We believe that the name should relate to some distinct feature of the farm, its location, topography or products.

FARM WAGES IN THIS COUNTRY

THE wages paid farmers is by no means uniform in this country. The Department of Agriculture, after an investigation, reports that the highest wage paid per month in the different divisions, board included, was as follows:

In the western group of states, $31.30; in the north central division, $22.22; in the north Atlantic division, $20.73; in the south Atlantic division, $14.25, the eastern gulf states, $13.10. In addition to these wages, however, where the hands work by the year, there are certain concessions and allowances made which would tend to somewhat increase the pay. Again these figures are given by the department as the wages paid in 1909, and their principal interest is in showing the difference of the wages paid in the different sections of the country. One can scarcely see the reason for that difference, though in the lower south the colored labor is no doubt the cause of the low wages paid.

FOR THE ICE SUPPLY

IT IS time to make plans for next summer's supply of ice, and the preparations need not be elaborate. Where the ice is taken from a body of pure water it may be used in summer drinks, but the supply need not be from a pure water supply to be useful for purposes of refrigeration. While sawdust is preferable for a packing material, fine chopped straw or hay or chaff from the haymow will answer the purpose very well. The building chosen for the icehouse should be so situated that it can be drained easily. In packing the ice a space of eighteen inches or two feet should be left between the body of ice cakes and the sides of the building, and this space should be filled with packing material. Spaces of a width of about an inch should be left between the cakes as they are tiered up. When all the ice is in place the sawdust or other covering should be spread over it so as to cover it completely. The space in the house above the ice should be kept well ventilated.

Thoughts for Everybody

A man is never a failure until he himself learns that he is.

Opportunities are like fish; we let the biggest ones get away from us.

It is as necessary for the farm hired man to be a reader as it is for his employer to be. See to it that he has Up-to-Date Farming.

The man that does things is the one that gets ahead, rather than the one that plans things. The one that does both leaves everybody behind.

The manure in the barn is bad for the stock, and that outside is terribly in the way. Don't you know what to do with it? Take the time, and charge the labor to the fields.

Three generals should be found in every neighborhood and on every farm: General Peace, General Plenty and General Prosperity.

What's the matter with the United States? A government report admits that 73,209 American farmers settled in the western provinces of Canada during the first five months of this year, and that they transferred in cash and property $110,000,000 of wealth from this country to the British possessions.

"Doctor," said the farmer, as he drove through town in his buggy with his best horse hitched to it, "if you should be out my way today, I wish you'd stop and see my wife." "What are her symptoms?" replied the farmer. "This morning after she had milked the cows, fed the pigs, got breakfast for the hands, done up the work, got the children ready for school, and did a few chores around the house, she complained of feeling tired. I guess her blood is out of order, and she'd better have some medicine."

The Frenchman who did not understand English, said he did not know how he could sow clover for his sow.

Are the feed boxes and mangers leaky? If so, your pocketbook is also.

The man who says he never makes a mistake is a do-nothing or a li— one who does not always tell the truth.

There is nothing better to use under carpets than old newspapers. The ink on them repels moths.

A piece of flannel dampened with spirits of camphor is good to use in removing stains from mirrors or window glass.

Don't let the fence wires become slackened, whether barb or woven. Such fences are inefficient, and indicate slack farming.

If the exception is better than the rule, make the exception the rule.

Gold can buy nearly anything but happiness, and that is what people want most.

The road to bankruptcy has signs all along it—buildings unpainted, fences and gates broken, and machinery left out in the weather.

Be sure that each day's work is done so well that it will not have to be done over again tomorrow or next week.

There are two classes of people—those who go ahead and do things, and those who sit still and cuss because the things were not done some other way.

Protect the sheep from cold rains and other storms. When the farmer gets wet, he takes off his wet coat and puts on a dry one. The sheep can't do that.

The sheep market is likely to advance. Cheaper mutton will be used in place of high priced beef. It is better and more wholesome meat than beef.

The person that knows too much to learn any more is a finished product.

If you want good neighbors, be one yourself.

If you get a backset, jump forward.

Those who get in the habit of making complaints never lack material.

Mules and men's ears differ, and so do their habits. Mules kick to get things out of their way: men kick because they get in the habit of it.

When a person too freely relieves his mind he is very apt to burden that of some one else.

A fellow may overlook you, but never mind; you can see through him.

The Reo Echo for December will be interesting to farmers. There are several articles about long trips in automobiles. The reliability of the motor car is firmly established. For farm business and pleasure use it is used by tens of thousands of farmers. Send for a free copy of the 48-page Reo Echo to R. M. Owen & Co., Lansing, Mich.

PUZZLE

Name the ten Advertisers Represented below:

Just a little of your time may win for you the first prize in this interesting contest

EXPLANATION

We reproduce above portions of ten advertisements in this issue. For instance, the first one is from the advertisement of Crofts and Reed. The others you are to find.

CONDITIONS

In addition to the solution of this puzzle we are going to ask that each contestant write a special letter giving his or her ideas for a puzzle for out February issue. The puzzle must be based upon or contain some reference to our advertising columns, such as those that have been appearing. Now get busy, you puzzle solvers, and tell us of a good puzzle for the next number.

In case of a tie, prizes will be awarded to the ones giving the best ideas.

Answers to this contest must be written entirely separate from orders or letters on other subjects, otherwise they will not be considered.

Contest open to every reader living outside of Indianapolis and Marion County, Ind.

All answers to be considered must be received before January 15.

We can not answer letters regarding this contest; the conditions above must be complied with.

PRIZES

First prize, to correct answer and neatest and best letter $3.00
Second prize 2.00
Third prize 1.00

A present will be given to each of the next 10 sending correct answers and neatest and best letters.

ANSWERS TO DECEMBER 1ST PUZ ZLE

Northwestern School of Taxidermy
E. W. Biggs and Company
P. A. Starck Piano Company
Appleton Manufacturing Company
Sunshine Safety Lamp Company
Hercules Manufacturing Company.
National Co-Operative Realty Company
Bickmore Gall Cure Company

PRIZE WINNERS

First Prize, $3.—Mr. W. F. Allman, Carrollton, Ohio.
Second Prize, $2.—Wayne Remley, Oranger, Ind.
Third Prize, $1.—Clara D. Trouter, Ionia, Ia.
Honorable Mention.—D. L. Keen, Kempton, Ind.; Myrtle Shuck, Summum, Ill.; John W. Houser, Desloge, Mo.; E. Cohen, 8 Grant St., Middleton, N. Y.; Susie Niles, Arkdale, Wis., R. 1, Box 25; R. H. Anthony, Mansfield, La., R. 3, Box 58; W. J. Filbin, Hydro, Okla.; Ella Shields, Chatham, Va., R. 1, Box 35; Mrs. Stella Mahtey, Merrillan, Wis.; Nick Van Zandbergen, Orange City, Ia., R. 1.

Address PUZZLE EDITOR, UP-TO-DATE FARMING, INDIANAPOLIS, IND.

Factory Prices for the Asking— on Genuine Witte Engines

FREE Engine Book

THE genuine Witte—conceded the best farm engine in America—now offered at actual wholesale prices. Yes, this is the engine that has lead the gasoline engine field for 25 years. Dealers have been getting the highest prices for the Witte. *Now* you can get one at actual factory price—what the dealer paid—and have the finest engine in your county.

Our Gas Well Saves You Many Dollars More

We do more than give you ordinary factory prices. We are the *only* manufacturers who have our own gas well. Power, testing, forge, foundry and heating fuels cost us nothing. *You* get the benefits. But you couldn't afford to own any other engine even if the Witte cost twice as much—because an average of 1 cent for every horse-power per hour *cuts gasoline bills in half*—pays for your engine in no time.

Every part *guaranteed* 5 years—*full rated horse power on minimum gasoline* guaranteed too. Built in all sizes from 1½ to 40 h. p., every one *tested to 10% overload.*

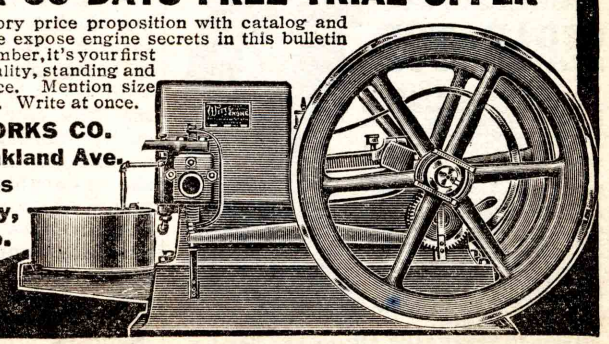
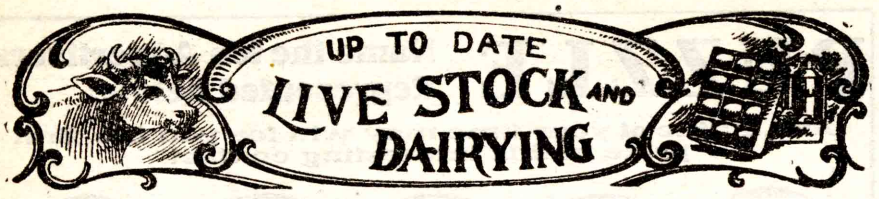
Every Part Guaranteed 5 Years





INFLUENCE OF THE PURE BRED SIRE

AN EASTERN paper says that calves from poor milkers should not be raised. Of course the paper speaks of heifer calves. Now, that depends altogether whether you have a strong, prepotent sire behind that heifer or not. Such a sire will often produce heavy milkers from low producing mothers. We have had the experience of repeated instances of this kind. The cow, Sarah of Jefferson, though a pure bred Guernsey, could not be made to produce over 225 pounds of butter a year. She was bred to the prepotent sire Espanore II. and produced the heifer Bernhardt, that

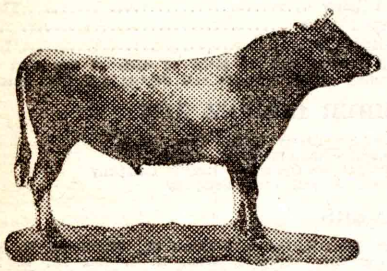


Photo by Connecticut Agricultural college.

This fine Jersey bull shown is at the head of the Connecticut Agricultural College Jersey herd. The Jersey cow has for generations been bred for a milk extremely rich in fat rather than quantity. She will produce a hundred pounds of butter from less milk than any other breed, with the possible exception of the Guernsey. The Jersey is also the most tenacious in milk. Although she is the smallest of the recognized dairy breeds, she will assimilate more feed for her weight than any other cow and return a profit for it.

yielded 401 pounds butter fat in her first milking period at two years of age.

This, with other facts derived from a study of eminent sires in our own herd, says the editor of another paper, where we have bred every member of it but one bull and two cows, convinces us that the great and preponderating influence in shaping the character of the coming cow is the sire. There follows then this conclusion: A poor sire, poor cows; a good sire, good cows. The dominant influence of the sire is seen very clearly in the breeding of grade herds. How often do we see this shown in the placing at the head of a mixed lot of very medium cows a pure bred bull. The resulting heifers in nine cases out of ten show the blood of the sire, and the improvement of their milking qualities over their scrub mothers also demonstrates it.

Keep right on with these heifers, breeding them and their descendants to pure bred sires in the same line, with constant weeding out of the inferior ones and in a few years you have a herd of great producers at the pail. The great difficulty in this matter is that farmers and many breeders even do not value highly enough the importance of the sire. In making a selection by purchase the overruling consideration with them is not quality first and price next, but rather the reverse. This reminds us of a remark once made to us by a very noted breeder of trotting horses, Major Campbell Brown. He said, "I have always failed in my judgment of the breeding value of a sire when I allowed the financial side of the case to step in and influence me."

DANGER OF INBREEDING

IN BUYING breeding hogs, especially herd boars that are to go in the pure bred herd, great care should be taken in the inspection of the pedigree. There is just as much danger tc the future of the herd in too close breeding as there is in having too wide an outcross. Some of the best breeds of hogs which we now know have been produced and their characteristics fixed by inbreeding, but after these characters are once fixed too close breeding is to be avoided. Inbreeding is a matter to be handled only by experts. It is very like a red-hot poker in that a man may get hold of the wrong end of it. While it is a powerful agent for the fixing of type and in the establishment of new breeds or of families within the older breeds, it is not to be handled carelessly or ignorantly.

FEED AND THE COW

THE cow, naturally a small producer of butter fat, cannot be made a large producer by any system of feeding, says a western farm paper. The cow has a certain natural ability to produce milk, and this ability cannot be made over by any system of feeding. Many cows do not have a chance to produce the quantity of milk they are capable of giving because of short rations. Before condemning the cow as being unprofitable and worthless as a milker it is advisable always to know that the cow has been given feed in such quantity and of such character as will give her a chance to show that she is capable of doing. This remark points again to the statement we have many times made that, generally speaking, our cows are not as poor as our system of feeding, which means that by the right feeding methods many cows that are now unprofitable would be profitable.

EFFECT OF DEHORNING A BULL

It is a somewhat debatable question whether dehorning a bull injures his character so that it will have any effect upon his breeding powers. Some observers and careful breeders rather favor the opinion that dehorning a bull takes away from him certain traits or at least modifies them to such an extent that his breeding powers are more or less impaired. Others cannot see that dehorning has any influence upon the breeding powers of a bull. The operation is in no wise dangerous, especially if done after the fly season.

SILAGE FOR BEEF PRODUCTION

FOR years silage has been known to be an economical feed in the production of meat. Not until the past few years, however, has silage fed beef been recognized as superior to that produced by methods of feeding in which silage has not been employed. In the packing centers of this country silage fed beef now commands a premium. This is an added argument for the silo. That little touch of refinement in the preparation of any food commodity which makes it sought by the consumer is a thing which the food producer can well afford to give. It requires about so much in cents to produce a pound of beef. If in the feeding that pound can be made just a little better than the average pound the added value is an added profit which usually costs little.

Fence Bargains

We are just in receipt of a letter from James Brown, president of the Brown Fence & Wire Co., in which Mr. Brown invites every one of our readers to write for his new 1913 catalog. If you need fencing of any kind, for any purpose, it will pay you to write to Mr. Brown at once. Brown fence is sold direct from factory, all freight prepaid wherever you live, and the prices are exceedingly low. Brown's catalog tells all the facts. Write a postal now—address Dept. 70, Brown Fence & Wire Co., Cleveland, O., and mail at once.

Rations for Fattening Steers

Shelled corn, 21 pounds; cottonseed meal, 2 pounds; clover hay, 4 pounds, and corn silage, 15 pounds.

Corn, 22 pounds; alfalfa hay, 5 pounds, and corn stover, 5 pounds.

Corn, 14 pounds; alfalfa hay, 10 pounds, and corn stover, 7 pounds.

Ear corn, 20 pounds; gluten or oil meal, 3 pounds and clover hay 8 pounds.

Ear corn, 13 pounds; oil meal, 2 pounds; shocked corn, 15 pounds, and clover hay, 7 pounds.

Corn, 15 pounds; cottonseed meal, 3 pounds, and mixed hay, 10 pounds.

Alfalfa hay, 9 pounds, and corn, 18 pounds.

Corn silage, 24 pounds; mixed hay, 5 pounds; shelled corn, 15 pounds, and cottonseed meal, 2 pounds.

Corn silage, 30 pounds; shelled corn, 16 pounds, and cottonseed meal, 3 pounds.—American Agriculturist.

A Valuable Book for Cow Owners

The De Laval Dairy Hand Book, now ready for distribution, is one of the most valuable small books for the dairyman we have even seen. It is filled with good, practical matter from cover to cover, and its subject matter was prepared by men of highest authority.

It contains a number of condensed discussions on subjects of every-day value to dairy farmers, including "Dairying for Profit," by Prof. John Michels; "Maintaining Soil Fertility on the Dairy Farm," by Prof. Elmer O. Fippin, of Cornell University; "Proper Dairy Feeding and Balanced Rations," by Prof. Hugh Van Pelt, of Iowa; "Alfalfa, the Wonderful," by Hon. F. D. Coburn, of Kansas; "Legumes for the Dairy," by Prof. C. W. Burkett; "The Silo and Silage," by Prof. C. S. Plumb, of the Ohio University; "Diseases of the Dairy Cow and Their Proper Treatments," by Dr. A. S. Alexander, of University of Wisconsin.

Other articles cover dairy cow judging, farm butter making, history of dairy breeds, stable ventilation, and other matter. The whole booklet is a valuable collection of facts and figures which every dairyman ought to know. The De Laval Dairy Hand Book will be sent free to our readers who write the De Laval Company for it and mention this paper. Address the De Laval Separator Co., New York City.

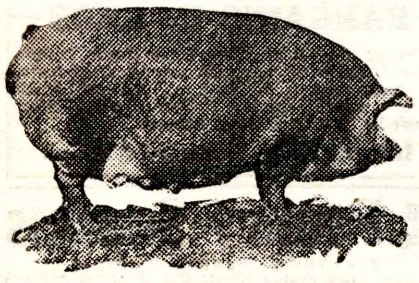
The work-horse trade mark on every box. Farm Account Book is ready. Send today.

BICKMORE GALL CURE CO. Box 94 Old Town, Maine

BEDDING FOR SWINE

HOGS of all ages and size require comfortable sleeping places to realize for their owners the full benefit of food consumed, writes a New York farmer. This applies more especially to their accommodations from fall until spring. Stock of all kinds are more sensitive to cold winds and wet surroundings than many persons realize. Make them comfortable, so they will not pile up one on top of another for warmth. This is unhealthy. The under one gets sweaty and coming in contact with the cool air will develop pneumonia, which is as fatal as any disease ever found in a herd of young pigs.

Zero weather does not hurt swine, provided other conditions are favorable. Have all the openings or ventilators so arranged that the circulation of air is from the inside, outward. Have no draft of air inward. This would create cold and dampness in a room. On a cold morning, when you see particles of frost adhering to the side walls and ceiling, you may be sure it is caused by impure air or steam rising from the pigs and therefore the pen is not properly ventilated. It is unhealthy for man or beast to stay in such atmosphere. Make openings on one side or one end of the room, but



Mc's Dream, the Duroc-Jersey sow herewith shown, won grand championships at the Wisconsin state fair and Illinois state fair of 1912. She won the senior championship at the international livestock show, Chicago, last year. This sow was farrowed March 15, 1907, and has produced seven litters of pigs, never less than nine and up to eleven. These pigs sold for more than $7,000. Her ancestors were winners at the world's fairs at Chicago and St. Louis, and her progeny have been state fair winners. She is considered one of the greatest sows of her breed from every viewpoint. Mc's Dream is owned by H. E. Browning, Hereman, Ill.

not opposite each other, and put in muslin windows of large capacity. This is an excellent way to dry and warm a room.

Shredded cornstalks make good bedding, and hogs will eat much of it. Cornstalks are the hardest and most disagreeable of all beds to clean. Oat and buckwheat straw are both undesirable. They lack wearing qualities. Both will sweat and become damp quickly, causing scurf, cracked skin and continued itching. Dry leaves make a good bed of short duration, but soon break into fragments, creating a dust. Baled shavings and sawdust both make desirable bedding for mild weather. They absorb moisture and impart a healthy odor, but are too cold and uncomfortable for winter use. We consider rye and wheat straw the best of all materials to use. This produces comfortable beds at all seasons. When given in sufficient quantities for the pigs to burrow into during cold weather they will be dry and healthy. It is important that all beds, no matter what material they are made of, be changed promptly when damp.

One of the most handy tools a farmer can have is an efficient Tool Grinder. Such a machine is made by Luther Grinder Co., 99 Stroh Bldg., Milwaukee, Wis. It will be sent on trial and will soon pay for itself. Write for their free book explaining how tools can be sharpened on the farm with artificial diamonds.

THE "CREAMERY PROMOTER"

REPORTS from the dairy commissioners of Kentucky, Tennessee and some other southern states seem to indicate that within the past two or three years dozens of co-operative creameries have been built under the influence of the professional "creamery promoter" in localities where the conditions did not warrant the establishment of such a plant. These promoted concerns cost the stockholders all the way from $4,500 to $6,000 and in most cases were later sold at auction for one-third of the original cost. The promoter, who was looking out for No. 1 chiefly, got a rakeoff of $2,000 from each one of the creameries built. The experience with the above class of southern creameries should not be construed as an argument against establishing creameries in new territory, but it ought to serve as a most emphatic warning for farmers who are interested in establishing the dairy business to give the professional creamery promoter a wide berth. He is not in business for his health, and his victims are always painfully aware of this fact before they get free from his hook. If the responsible farmers of any locality make up their minds that they really want to start a creamery the wise thing to do is to ask the state dairy department to send a representative into their midst, with whom they may confer. In addition to getting disinterested advice from him it would be well to pay the carfare and hotel bills of some thoroughly practicable and reliable man who is managing a creamery under conditions that would likely prevail in the new place. If this plan is followed out not only will creameries not be started where they ought not to be started, but if it is decided after thorough investigation that the circumstances justify starting one the plant when completed will cost less than half what it would if built under the advice and direction of a promoter.

CLEAN THE DAIRY BARN

The cows should go into winter quarters that are thoroughly clean, bright and sunny. This means that the cobwebs on the walls and ceilings must be cleaned away, a good coat of whitewash should be applied, all the broken window lights replaced and the windows made clean enough so that the sun can shine through.

The Dairyman

Whether the pure bred herd will pay or not depends very largely upon the keeper. One thing is absolutely certain—if a man will give the cows half a chance profits will be his.

The dairy farmer is in a better position to raise good calves, pigs and chickens than his neighbor who does not believe in dairying.

Don't let the cows out in the storms to stand around. It doesn't pay.

When a cow that is not in the habit of kicking puts her foot in the pail you may be sure there's a reason. Try to find out what is the trouble. Her udder may be sore.

Frequently a cow will milk to better advantage if she is given little feed during the process.

Many an apparently inferior cow could be made good with better care and feed.

The making of milk from hay by what is called the synthetic process has not been developed to the point where the person who has laid by a little savings fund would be justified in buying stock in any company purporting to manufacture the new product. Fellows who are engaged in the selling of such stock are not half so much interested in making milk out of hay as they are in getting hard cash out of blue sky and gullible suckers. Better steer shy of them.

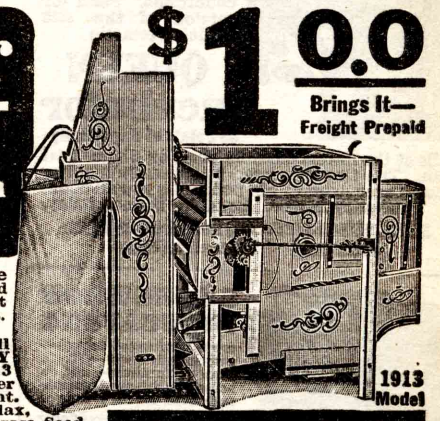
One Dollar
Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded

Manson Campbell



1913 Model

$10.00 Brings It—Freight Prepaid

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

The CHATHAM Grain Grader and Cleaner

Your Dollar Returned
if you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm
After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment.* Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free
In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.
I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed
My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment
Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book
on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept. 31,

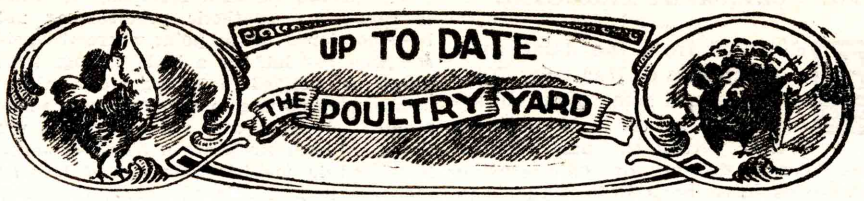
JOHNSON, INCUBATOR MAN, Clay Center, Neb.



INCUBATION BRIEFS

THE fellow who refuses to disinfect the incubator after each hatch may expect bacillary white diarrhea among his chicks. Incubators should be brushed and scraped, then scrubbed with creosol soap or sprayer with a 2 per cent solution of creolin. Let all vapor and odor escape before using; otherwise eggs will be affected.

If pessimistic about moisture, note that Oregon experiment station reports 100 per cent. better hatches with maximum moisture and heavier chicks. Maximum amount of moisture gave chicks weighing 1.159 ounces; dry ma-

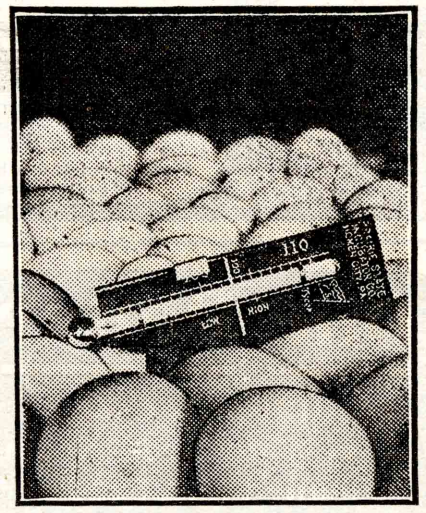


Photo by C. M. Barnitz.

THE BULB ON THE EGG.

chines, chicks weighing 1.072 ounces and most dead germs and chicks in shell.

Not testing eggs means loss. Eggs may be infertile, one rot may kill all embryos or the poisoned air may weaken germs and cause chicks dead in shell of weaken hatch. A thermometer bulb resting on a rot or infertile gives a false standard for live eggs with natural heat, and thus machine run too high and spoils the hatch.

The fellow who refuses to turn and cool eggs may get a 10 per cent. hatch or none. Watch Biddy rustle and cool her eggs, exercising the embryos, heating them uniformly and giving them fresh oxygen.

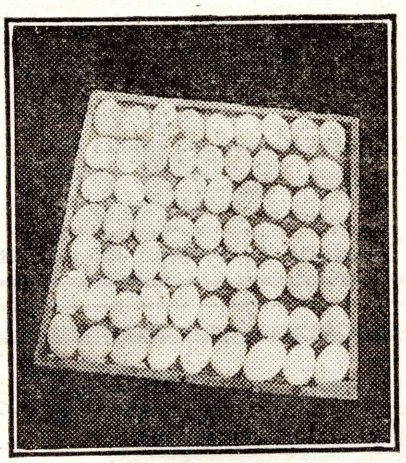

Photo by C. M. Barnitz.

SIXTY-FOUR DEAD IN THE SHELL.

Turn eggs twice a day and cool from ten to thirty minutes, according to weather, from third to eighteenth day of hatch.

There are several causes for dead chicks in shell. We find the main are underheat and overheat.

Opening door when chicks are hatching and moisture rising from opening shells often causes sudden drop and kills many. Sixty-four eggs, all the fertiles in hatch (note cut) were killed by overheat in last week, when thermometer went wrong. There are others.

At the end of every hatching season there are pessimists who quit chickens, crying, "Incubators and incubator chicks are no good, and there's nothin' in chickens!" Most of these belong to that pessimistic multitude who forgot they were working out problems in flesh and blood and tried to do it with cheap, claptrap, fire trap, chicken machinery.

EGGS IN WINTER

THE main secret about getting eggs in winter is to give the hens summer conditions—warm quarters, scratching places and dust baths independent of the conditions of the weather outside, and plenty of feed and water, the former to include meat scraps or some form of meaty substances to supply the place of insects so persistently sought in the summer. To this must be added grits or limy substances that may be found outside in summer but not in snowy or frozen weather.

The winter quarters must be kept clean, and they must have all the sunshine they can get, but without the snow or biting winds. They must also have plenty of pure and fresh air, but without cold drafts.

These conditions do not mean that the hens must be kept penned up all the time. Give them all the range possible in good weather, but see that they are sheltered from snows and other cold storms. In all this we are suggesting no very serious problem to up-to-date poultry keepers, but it is the price of winter eggs.

A Bughouse Dream

One night as I lay on my pillow
I had such a terrible fright.
I dreamed I turned into a rooster
And was roosting out in the night.

The wind was freezing my comb off.
My toes were froze fast to the tree.
A skunk down below waited in the deep snow
To make chicken salad of me.

I felt the lice crawling all o'er me.
Theq crawled, they scratched and they bit.
They called me old boneyard chicken.
Well, indeed, I was far from fit.

I was thinner than Job's old turkey.
What I ate I had scratched from rot.
A few grains of corn, some musty old seed,
Was all the whole day I had got.

I froze there and thought my life over,
John Bughouse had made life so drear
I decided to end my existence,
The future held nothing of cheer.

When along came a man with a hatchet,
And I cried: "Please cut off my head!
I'd rather be dead than be bughouse!
I'd sooner be skunk fed instead!"

I relate this strange dream for John Bughouse.
I hope he'll not miss future bliss.
But if he wouldn't go where the hottest fires glow
He must quit bughouse business in this.

—C. M. Barnitz.

HINTS TO POULTRY RAISERS

ONE of the most valuable little pamphlets that has come from the Department of Agriculture is one bearing the above title by Harry M. Lamon. From it we select the following "Hints:"

Be sure that the male at the head of the flock is pure bred.

The Mediterranean are considered the egg breeds. They are Leghorns, Minorcas, Spanish, Blue Andelusians and Anconas.

The Asiatic or meat breeds are: Brahmas, Cochins, and Langchans.

Don't Fool With Wood Shingles

Buy STEEL Shingles

They Cost Less, Last Longer, Are Easier to Put On and Are Fireproof

This is the Age of Steel. Wood shingles have gone out of date. Cost too much. **Too much bother to put on. Rot out** in a few years. And they multiply by 10 the danger of fire.

Thoughtful men are nailing STEEL Shingles right over their old wooden roofs.

And those putting up **new** buildings are likewise careful to choose STEEL SHINGLES.

Edwards STEEL Shingles

come in big sheets of 100 shingles or more. Don't have to put them on **one at a time** like wood shingles. Just nail the whole sheet right over old roof or on sheathing. No **extras,** no **painting,** no **tools** needed. **And money** can't buy a more handsome roof.

Absolutely Rust-Proof

Don't judge Edwards **Steel** Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely **prevents** rust from getting a foothold, as 100,000 delighted owners of Edwards Roofs have found. It's the famous Edwards **Tightcote Process.**

Protection From Fire

Don't take chances of **fire** from defective chimneys, flying sparks and lightning. Roof your buildings with these STEEL Shingles and make them safe. Remember, nine out of every ten fires start with the roof. We specifically **guarantee** every Edwards Steel Shingle Roof against **lightning.** This guaranty is by a $10 000 Cash Bond.

Write for Special Factory Prices —Freight Prepaid

We sell direct from factory to user, thus saving you 40% And our business is so big that we cut our profit-per-sale to about half the maker's usual profit. **And we pay the freight.** Amazing as it may seem, these STEEL Shingles actually cost LESS **than wood** shingles.

Send postal at once for our latest Roofing Book No. 191 and Special Factory Prices. Give size of roof, if you can.

THE EDWARDS MANUFACTURING CO. 141-191 Lock Street (93) Cincinnati, Ohio

FIRST AID FOR INCUBATOR CHICKS

YES, when it comes to playing stepmother to a couple of hundred bird babies the first time the amatuer incubator operator is a little bit puzzled. That's the fellow this simple story is for.

Have the brooder clean, dry and bedded with dry sandy loam and hover, showing a temperature of 90 to 100 degrees.

After chicks have had a thirty hour fast and been hardened down to stand

Photo by C. M. Barnitz.

PUTTING IN THE CHICKS.

90 degrees, remove from machine to brooder nursery in warm lined baskets.

Put chicks under hover to show where heat is and be guided by their actions as to whether temperature is right.

Too cold, chicks pile up; too warm, they part and desert hover; just right, they lie content apart like lambs.

Fifty to seventy-five chicks are enough for ordinary hover, according to breed, allowance being made for growth and breed. Chicks naturally take to feed and drink, but an older chick placed with them teaches them quickly.

When chick begins to assert itself, eats, runs, scratches, begin to modify temperature more and more as chick is able to bear it.

Let it into scratch parlor, give it more fresh air, let it out into a screen guarded from drafts, then on to free range, its actions an indicator as to what agrees or disagrees.

When chick has assimilated yolk, which takes from thirty to forty hours, then throw down a little sweet, dry, fine breadcrumbs and a little chick grit.

Lead from this to good chick feed and then to larger as chick gets older. Make the little follows exercise for their feed and always remember the rule: Feed little, but often. Build for frame, muscle, blood, and that means much protein especially found in worms, bugs, cottage cheese, beef scrap, cut bone and grains well balanced in protein and carbohydrates.

Red wheat is better than white for chicks, lettuce and crisp clover good greens, but meat and cut bone should be fed sparingly at first.

Grit, water, charcoal and hopper of equal parts, bran, wheat, mids and cornmeal should be kept before them. Try this for a chick feed:

Cracked wheat	25 lbs.
Cracked corn	10 lbs.
Pinhead oatmeal	15 lbs.
Millet	5 lbs.

While the donor is not a member of the party which elected Governor Wilson as president, William Galloway, the big Waterloo, Ia., manufacturer, has announced that he will give a $5,000 cow to President Wilson to supply his household with pure milk.

Around the Hennery

Here is where so many people fall down in the hen business. They will not feed well while the hens are "dry."

Charcoal is not a food, though fowls gain in flesh and eggs during its use. It simply puts them and keeps them in a good condition for work.

Impure air, as well as dampness, is a danger to any flock. Separate the flock in bunches of twenty-five or fifty and feed them separately, and they will make much better gains.

With the possible exception of broilers, capons produce the highest priced chicken meat on the market. They frequently bring as high as forty cents a pound and never less than twenty cents.

During the winter months the poultry houses are apt to get damp, and some kind of absorbent material should be used on the floors of the poultry houses and under the roosts. Nothing excels dry dirt for this purpose.

Remember that if the hens do not have a full supply of grit the food will not pass through the gizzard as it should. The gizzard and the passageway from the crop to the gizzard become clogged, and many a fowl dies simply from want of material to grind its food. Keep grit before the fowls at all times.

Invariably a flock of hens will seek that spot in their yard during cold weather which is sheltered from north winds and which is also exposed to the sun. These are the chief advantages of the scratching shed and are practically a necessity if one is to get eggs during the winter months.

The Shoe With the Sole of Steel
Ten Days FREE

FREE BOOK
Let me send my book to you by mail postpaid. Read it and learn more of this great shoe with the sole of steel—the shoe with the light, springy, airy "step"—the shoe that rests your foot naturally and comfortably, always holding its perfect shape—never a "rundown" heel, broken arch, warped sole, worn toe, twisted uppers or cracks and leaks. Before you think of buying a pair of work shoes, get this great book of shoe facts and learn about this wonderful footsaving sole of seamless steel. Do not think of turning this page until you have sent for this free book.

I Want to Know Why YOU Have Not Sent for YOUR Pair of These Shoes

N. M. Ruthstein
The Steel Shoe Man

I want to know why you have hesitated—why you have held back—in the face of my open, frank, man-to-man offer to let you try a pair at my own risk, without your taking a chance or running the risk of losing a single penny.

I don't know how I could offer you anything more than that. I don't know how I could better offer to prove to you the absolutely wonderful advantages of this shoe, than to let you put them on your feet and try them for ten days at my risk.

Over a million men in all occupations have tried, tested, used and proved the actual value of this wonderful shoe with its light, springy, sensible sole of seamless steel.

I Want to Let YOU be the Sole Judge

I want to leave it wholly and entirely up to you to say, from your own trial and examination, that this shoe will preserve your feet, protect your health, and save you the money that you now waste in continuously buying the old, heavy, leaky, warping, unsanitary and painful leather-soled workshoes that look bad, smell bad, feel bad, and wear out every few months at the very best.

I Can Save Your Feet and $10 to $20

I can do this because I have done it for a million others. I can do it because I have created a shoe that is comfortable, dry, sanitary and economical—

Because each pair will outlast three to six or even eight pairs of best quality all-leather work shoes. Furthermore, there are no repairs—no loss of time or trouble of any kind. This shoe is made for comfort and made to last. The soles and sides(as shown in illustration) are stamped in one seamless piece from light, thin, springy steel, secured firmly to the uppers, which are of the very best quality soft, pliable leather—absolutely waterproof and almost indestructible. The soles are studded with adjustable steel rivets, which give perfect traction, firm footing, and protect the soles from wear. The rivets themselves (which take all the wear) can be quickly replaced when partly worn. The cost of these is almost nothing—50 adjustable rivets for but 30 cents, and they will keep the shoes in good repair for from two to even three years.

Abolish Corns, Blisters, Bunions and Callouses

This shoe will give you absolute foot comfort because it has absolute foot form—and the sole being steel, it cannot warp, twist or draw out of shape. Consequently corns, bunions, callouses, etc., cannot be irritated and no portion of the foot rubbed so as to start new miseries of this kind. You know very well that a perfect fitting shoe never made a corn in the world—and you also know that an all-leather shoe cannot fit after it has a twisted, broken side, that allows the uppers to crease up into galling wrinkles.

Save the Arch of Your Foot

As soon as a leather sole becomes wet and slightly worn, the arch gives way and flattens out—immediately endangering the very life and service of your foot. In this shoe the steel arch cannot break or get out of shape—it is a continuous, elastic restful support—always remaining exactly the same during the entire life of the shoe.

Parcels Post Will Bring These Shoes to Your Door

Through the new system of our National Parcels Post, you can now have a pair of my shoes delivered right to your home. You do not need to go to town or to the express office after them—and as the capacity of my great Racine factory alone is now far above 5000 pairs a day, shipment will be made the day your order is received, and you will have the shoes on the wings of the U. S. Mails.

Banish Wet Feet, Colds, Chilblains, Rheumatism

With this shoe you can work all day in mud and water—**and your feet will remain powder dry.** It is an absolute protection to your health. You escape colds, rheumatism, neuralgia, the dreadful pneumonia, and the long list of ills and dangers that result from damp or wet cold feet. In fact, these shoes pay for themselves again and again simply by preventing sickness—saving doctor's bills, and allowing you to work in weather in which you would not otherwise dare to leave the house.

Lighter Than Leather

This firm, yet springy, elastic tread gives you an ease and lightness of step and comfort that delights your feet, and gives your whole body a resiliency that lifts the pain and burden from the work of the day. You can stand more, walk more, do more, earn more—and live longer in perfect muscular health and strength.

Join the List of Happy Users

Become a Knight of the Steel Shoe, Save yourself and save your money. Farmers, miners, smelters, railroad men, hunters, and all workmen raise to the skies their praise of this shoe with its wonderful, yet simple, sensible, sole of steel. Break away from traditions that have cost you pain, loss of time and unnecessary expense. Accept this proposition that I have made to prove to yourself the comfort, the economy of this shoe.

Amazing Success

Indeed, the success of this shoe has been truly amazing—for within four years I have found it necessary to establish great factories in Racine, Wisconsin; Toronto, Canada, and Northampton, England, to meet the demand which has arisen in such tremendous volume from all over the world. This astounding growth is the result of good words spoken by delighted wearers to their friends and neighbors, and because I have not been afraid to place my shoe upon any man's foot to absolutely prove for it every word and every claim that I have made. This same proposition is made to you today. Do not delay. Do not put it off. Do not think about buying a pair of workshoes without learning all about this wonderful shoe with the sole of steel.

New 1913 Models in All Sizes—For Men and Boys

For men in sizes 5 to 12—6 in., 9 in., 12 in. and 16 in. high. For boys, sizes 1 to 4—6 in. and 9 in. high. They cost no more than ordinary all-leather workshoes.

The Passing of Time

Christmas came and went again,
And New Year is here today;
Thus has it been for many a year,
And thus 'twill be alway.
But progress ought to mark the years,
And better times await;
'Twill be that way for every one
Who studies UP-TO-DATE.

NINETEEN THIRTEEN

IN PREPARING this department of UP-TO-DATE FARMING for the issue that comes with the beginning of the year, my mind goes out to every home on the farm this paper enters. That takes us into every state and territory in the American Union, and into Canada and other foreign possessions. How different are the conditions surrounding these homes today! Some of them are wrapped in the snows and shaken by the storms of the northern winters, while others are surrounded by growing herbs and blooming flowers, and are serenaded by the glad songs of happy birds. But in them all are men and women and boys and girls. No, not in all, for in some cruel bereavements have made empty chairs. But in them all are fears and struggles and hope and love. How glad we are when UP-TO-DATE FARMING can diminish the fears, make easier the struggles, brighten the hope and intensify the love that makes the home a paradise!

But life has more in it than sentiment. There are stern realities everywhere, and on this day that begins another year, we may look back to see what other years have brought; what of our struggles have been crowned with victory and what have met defeat; what efforts have been successful and what have failed; what mistakes we have made and the results that have followed them; what griefs and losses fate has brought us, and what blessings came with the passing years? This review is not to grieve or be discouraged over anything of the past, but rather to increase our strength and courage for the year that begins today. Each year contains a birthday for us all, and another notch must be cut on the record stick of our lives. Are the new notches cut above the others or below them? Are we all the time getting higher, or do we feel that we are receding as the years come and go? Now is the time to determine that we will advance and not fall back. There is much to do, and each stroke of work and each step we take should lead upward. We are sure it does with all of our up-to-date people, and that the world is getting brighter and better because of them. We wish you all a happy New Year.

THE LITTLE THINGS

EVERYBODY is looking for big things to do, and many are worrying because they cannot find them. But after all, life is made up of little things. The little minutes make hours, the hours make days, and the days make years. In the home one may sweat and toil over the big jobs that come up, and at the same time disregard the little ones as things that may wait or that may go undone altogether, whereas, if the little ones had been done on time, and done well, the big ones would never have assumed such great proportions. Besides, the doing of the little things, and the doing of them in time and doing them well, is what constitutes good housekeeping. Too often are people inclined to do jobs "well enough for this time," intending later to make up for the deficiency. The later seldom comes, and the work accumulates, and many times household goods suffer for lack of proper care. To apologize for a thing imperfectly done makes the doing no better, nor does it add anything to the reputation for good housekeeping. Do well the little things, and the big things will take care of themselves.

These same thoughts lead to many people who aspire to great deeds in life. A wish to do, and even to become famous, is commendable, but too often aspiring people miss their opportunity waiting for the great thing to do. In every home and in every neighborhood there are deeds of every day that constantly beckon to be done, but such people are looking too far away to see the things that are so near and common. Again we plead for the little things. "In as much as ye have done it unto the least of these ye have done it unto me." How fast the little deeds of kindness and goodness grow! And how soon we find great things in the vicinity of home that we never saw before. We do not presume to preach to or lecture our up-to-date people, but greatness grows from little deeds, as small seeds produce abundant crops; therefore, do not slight or disregard the little things.

Lever Bill Reported Favorably

December 14 the Committee on Agriculture and Forestry in the United States Senate reported out favorably the Lever agricultural extension bill. The friends of the bill are urging the Senate to consider the measure promptly so that it may become a law early in January in order that the state legislatures then in session may accept its provisions and make the plan immediately available. The bill provides for a skilled farm demonstrator to work in every agricultural county in the land. It calls for equal federal and state support and places the supervision and conduct of the work under the state colleges of agriculture.

UP-TO-DATE FARMING will print the Lever bill in January 15th number and tell our readers plainly what we think of it. We have referred to it in several articles already.

CHANGE IN HOME WORK ON THE FARMS

THERE is a great change in the domestic industries. The program for the women folks involves many things that are now almost forgotten. At "hog killing time," an important epoch in the old home life, the women were expected to save every waste particle, often including the cleaning and washing of the entrails, for soap grease. Then there was complaint in the house when wood was brought to be burnt in the big fireplace that "would not make good ashes." The

building of an ashhopper was an important element in the home economy, and all the ashes taken from the fireplace must be put in it. At the proper time, water was carried and poured thereon. This water soaked through the ashes and dripped out at the place arranged for it, where it was caught in vessels as lye. This was boiled with the soap grease in it. The potash in the lye consumed the material used as "grease," and converted it into soap for use in the family washing. When beeves were killed the tallow was all saved and molded into candles for the home lighting. Knitting was the household work to fill all vacant moments, the hosiery for the entire family being thus provided. Knitting needles are now no longer a part of the home equipment.

Brooms were something of an object then in country homes, and it was the practice to raise a few rows of broomcorn every year, the heads being cut and tied around a small stick, thus making round brooms, the modern flat broom being unknown. Each year brings its changes. Let us be thankful and take courage, for they are all for the better?

BALANCED RATIONS FOR FOLKS

WE HEAR a good deal about balanced rations for cattle, hogs and sheep, but mighty little about balanced rations for human beings, yet the question is one of vital importance. There are thousands upon thousands of folks in America—and the number is immeasurably greater in Europe and the Orient—who lack in strength and vitality and power to work simply because they do not have a sufficient amount of food of the proper nutritive elements. In many such cases folks are listless and lifeless and do not realize what is the matter with them. Likely the trouble is due to too much fat and heat producers and not enough bone and muscle formers. The writer knows of a number of families in which the members are dumpy or unstrung and nervous when what is needed is not more tonic, but more eggs, fresh milk, beef, beans, cheese and fish, all of which articles are high in protein content. These foods cost money, but in the long run they are cheaper than too much in the way of sweets and pastries of one kind and another, with doctors' bills tacked on.

A FARMER'S EMPORIUM

JUST twenty years ago a company was organized in Chicago to buy, dismantle and sell the famous Chicago Columbian Exposition. That was the beginning, and since that time the company has grown to be one of the largest dealers in all kinds of merchandise in the world.

Every famous World's Fair and exposition for the past twenty years has been bought outright and sold by this famous company, including the Pan-American Exposition at Buffalo, and the St. Louis World's Fair.

If you want an idea of some of the wonderful bargains and prices made by the Chicago House Wrecking Company, see the last page of this issue.

A trip through the wonderful large offices and warerooms of this mammoth business would be well worth while.

The office is as busy as a bee-hive with hundreds of clerks and stenographers writing customers and attending to the orders. Everything receives the best care down to the smallest order.

A department of the business that attracts much attention is the Furniture Exposition. Furniture of all kinds here at prices way below usual. There are many model rooms furnished in various styles. Here is furniture of all kinds, all low in price, for dining-room, kitchen, parlor, bedroom and all purposes.

There are all the other departments embracing every kind of merchandise used—wire fencing, roofing, structural iron, clothing, machinery, groceries, jewelry, wagons, buggies, lumber, plumbing and all. Each department is in charge of an expert in their line whose help and advice may be secured free by readers of UP-TO-DATE FARMINGif you write the Chicago House Wrecking Company.

This entire big business may be brought into your own home even on your table, as it where, for you to study, look over and examine at your leisure. A large catalog of over 1,000 pages will be sent free quoting prices unheard of before that will save you money. Turn to the last page and write for the catalog. Every customer of this company is guaranteed complete satisfaction.

"RUBY GORDON Or Back From The Grave" FREE
By Libbie Sprague Phillips.

Here is a thrilling story of love, mystery and adventure that will grip your attention from the first word to the last! It is one of the greatest novels this famous writer has ever produced. Ruby Gordon, a poor orphan girl, becomes engaged to one of the young men in the town, who is the adopted son of a wealthy recluse. The old gentleman took a great dislike to Ruby Gordon because she reminded him of his wife who had left him years before and had been lost at sea in crossing the ocean; he felt that she was his wife's spirit reincarnated, and forbade Lawrence, his adopted son, to marry her, and made so much trouble that the young man finally broke his engagement and married another, but it is not their fate to so easily evade Ruby Gordon, as you will discover when you get your free copy of this great book and read the story yourself! Ruby Gordon will surely find a warm place in your heart—she is one of those sweet pure characters every reader admires. We purchased a large edition and will send the book free and postpaid to all who send 10c to pay for a 3 months' subscription to our big farm and home magazine. Send today. Address

Hercules at a nice profit. Why don't you get

The Wonderful Hercules

The Hercules is the only genuine All Steel Stump Puller made. It is 60% lighter and 400% stronger than any iron puller made or any "semi-steel" puller. The Hercules has ample strength to pull out any stump or green tree or hedge. Its triple-power principle gives it a powerful pull—yet easier on the team than any other puller ever made. Either self-anchored or stump-anchored. Built low to the ground. It can be furnished with 200 feet of cable—enough to pull 3 acres of stumps without moving the machine.

It is sold on 30 days' free trial, backed by a 3 year guarantee that insures the free replacement of any castings that may break from *any* cause, flaw or no flaw, at any time within 3 years from date of purchase.

My New Low Prices

This year I have set aside a limited number of Hercules Stump Pullers for the first buyers, at a price that will clean them out quick. Send me your name now on the coupon—or just use a postal—*but send it today*. My new book will surprise and please you. See the real pictures, from 25 different states, of big stumps the Hercules has pulled out like you would pull weeds. Read the many interesting letters from farmers, lumbermen and land promoters.

I'll send the book and special price offer by return mail. I'll tell you the best crops to raise on virgin land where stumps were before. I want you to get my free book and special price proposition at once. Mail me the coupon or postal right now, before you forget, or take down the name and address and write me soon. Address me personally.

Garden *and* Orchard

Lime and Its Connection with the Fertilization of the Soils of the South

By W. L. Carr, Summerdale, Ala.

THE majority of soils in the south would be benefited by small applications of lime—late fall and early winter is a very good time to apply it. Five hundred to one thousand pounds per acre, according to the acidity of your particular soil, can be applied while on some land one ton per acre can be used to more advantage. It has been determined that even on many upland and well drained soils the acidity is so great that very few plants will thrive. The acid condition of certain soils found in many parts of the south may render inefective to a great extent, the commercial fertilizer that is applied to them. To get the greatest benefit from commercial fertilizers, the land on which they are applied, should be in good mechanical condition and free from acidity. Lime is very beneficial in the plowing under of green manure crops as it tends to hasten their nitrification; which is the change that takes place in the decay of organic matter that passes through several stages finally to be converted into nitrates, a form of nitrogen most easily assimulated by plants.

Lime takes the place of Potash in certain chemical compounds, which exist in soils, thereby liberating the potash and placing it in such a form that it is readily made use of by growing plants. When phosphates are added to soils that are deficient in lime, these soluable phosphates will form compounds with the iron and alumina of the soil which are not readily utilized by plants. The utilization of atmospheric nitrogen by certain of the leguminous plants, particularly upon sour soils, is facilitated by the application of lime. Again, very marked benefits are noticed when lime is applied to muck soil. The production of carbonic acid gas is accelerated by lime, which in turn reacts with the inert plant food in the soil and tends to make it more available to the plants. It has been determined by experiments carried on by the Rhode Island Experimental Station that the following plants are specially benefited by applications of lime: Spinach, lettuce, salsify, asparagus, egg plant, cantaloupe, turnip, pea, pepper, peanut, rhubarb, squash, pumpkin, string bean, tobacco, sorghum, alfalfa, clover, barley, emmer, wheat, oats, timothy, Kentucky blue grass, Canada pea, orange, quince, cherry and plum. Plants that show slight injury by liming: Cotton, tomato, cow pea, concord grape, peach, apple and pear. Plants injured by liming: Radish, velvet bean, blackberry, castor bean and lupine.

The practice of applying small amounts of lime at frequent intervals being generally accepted as preferable to the use of large amounts at rare intervals. A farmer can determine if his soil will be benefited by the application of lime in the following way. Procure from your druggist a few sheets of red and blue litmus paper. Cut these into strips one-half inch wide and four inches long. Test the different parts of your field by making on opening in the soil with your jack knife. Insert a strip of blue litmus paper and press the soil back against the strip of litmus. In a few minutes remove the paper. If its color has changed from blue to red your soil is acid and in need of lime. It is important that the earth is moist so that it will thoroughly wet the paper. If there is no change of color in your paper make another test using a strip of red litmus. A change of red to blue indicates that your soil is alkaline and not in need of lime. If no change takes place your soil is neutral and would be benefited by a small application of lime.

Purchasing Fertilizers

A question frequently asked is: which is the most economical to apply, a large quantity of low grade fertilizer, or a smaller amount of high grade fertilizer.

If the two brands are commercially worth the price and the goods are of guaranteed analysis it is advisable to purchase the high grade goods for the following reasons:

A ton of a 8-2-2 goods (8 per cent. phosphoric acid, 2 per cent. nitrogen and 2 per cent. potash) contains 160 lbs. of available phosphoric acid, 40 pounds ammonia and 40 pounds of potash. The total of 240 pounds of plant food is mixed with 1,760 pounds of material of no fertilizing value. The same amount of plant food can be obtained by using the following: 1,000 pounds 16 per cent acid phosphate, 200 pounds 20 per cent. sulphate of ammonia and 80 pounds of 50 per cent. sulphate of potash. The total of 1,280 pounds which contains the same amount of plant food as the 8-2-2 mixture minus the freight and the expense of handling 720 pounds of filler.

Summing up you have the same amount of plant food, just one-half the freight to pay, only one ton instead of two to haul from the station to the farm and but one-half the labor in applying it to a crop with a certainty of equally good results.

VALUE OF BARNYARD MANURE

The nitrogen in barnyard manure is easily worth eight cents a pound. In the course of twelve months a horse will produce fifteen tons of manure and litter, containing in round numbers, 130 pounds of nitrogen, with a value of $10.40. When this same basis of calculation is applied to each grown animal on the farm it is easy to know what the value of the winter's manure is if that manure be got into the land in such a way that this nitrogen, together with its other fertilizing elements, is saved.

TO MAKE GRAFTING WAX

AN EXCELLENT grafting wax is made by combining three parts rosin, two parts beeswax and one part tallow. The three ingredients should be melted together carefully, but the mixture should not be allowed to boil. The hot liquid should then be poured into a pail of cold water. With greased hands the wax should be spread out flat, so that it will cool evenly. It should be allowed to cool until it is tough, but not brittle. The wax should then be taken from the water and pulled like taffy until it is fine grained. It may be molded into balls or twisted into skeins and put away in a cool place. When needed for orchard work the wax should be warmed in water or with the hands.

Farming With Brains

When one hears of a great yield of corn or small grain it is a safe guess that a good alfalfa or clover sod existed on the field not many years before.

The planting of good seed is the foundation of success in farming, and many there be who fail to build upon that foundation. For all such the outlook is discouraging.

The compost heap is the farmer's saving bank. There, little by little, he saves wealth that otherwise would go to waste, but, gathered together and properly used, will make the soil richer every year.

Diversified farming carries an idea of intensified farming—that is, getting the most profits from an acre of land. When crops are diversified the land is occupied longer and consequently yields more than when one crop is grown and the land lies fallow a large portion of the time.

Constantly you will hear men saying in public addresses and agricultural papers that it is impossible for the ordinary farmer to produce beef profitably, while just as constantly the farmers in the corn belt are throwing away the corn plant, which, if preserved in the silo, is the finest meat making food in the world.

GROW

Great Crops of
Strawberries
and How to Grow Them

IS a beautifully illustrated book of expert information written by America's most successful strawberry grower. It gives the famous Kellogg sure-crop method and explains just how Pedigree Plants are grown on the great Kellogg plant farms in Michigan, Oregon and Idaho. Any man, woman, boy or girl, who reads this book can grow big crops and get big prices. Strawberries yield more dollars per acre than any other crop. Our book tells the whole story. It's FREE to you.
R. M. Kellogg Co. Box 285, Three Rivers, Mich.

Fruit Growing Pays

There is big profit and pleasure in fruit growing. Even a few trees are profitable. Apples are worth twice as much as Oranges! For years we have advised our readers to plant orchards, and many are now getting their reward in big profits. Every home-owner should plant a few fruit trees.

GREEN'S FRUIT GROWER tells you how and where to plant, how to prune and spray, and how to make your fruit trees most productive. Mr. Green has piloted many orchardists.

One of our subscribers writes us that he got $596.91 net from five acres of strawberries.

Another one got $240.64 net from two acres of raspberries.

Another one got $490.66 net from two and a half acres of cherries.

This is better than growing wheat at $1.00 per bushel, thirty bushels to the acre.

Charles A. Green, the man who, over thirty years ago, discovered that fruit growing was the best and most profitable way to occupy land, has written an intensely interesting and highly instructive book, "How I Made the Old Farm Pay." It is worth many dollars to any fruit grower or farmer. It is a story of Mr. Green's actual work and its results. YOU may follow its methods and teachings and make your farm much more profitable.

The January, 1913 "Brim Full" Number.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE New Year begins today, and glad hearts welcome it everywhere. To the aged it brings a feeling of seriousness, and the mind runs back to other years; but the young are joyous and the searchlight of Hope illumines the future to show them happy accomplishments in the years to come. We cannot express our New Year's wishes for the Cadets of Equity better than in the following lines selected for this special purpose:

In this New Year our wish for you will be,
Your ship may come a sailing in with
treasures from the sea;
And may she bring your dearest wish,
good luck and peace and joy;
And may no evil happening in all this
year annoy."

DEAR CADETS: I am a farmer's, or rancher's, as they are called out here, son, of 21 years, and we have a ranch of 42 acres of valuable land under the United States government irrigation project. The trees are doing fine, and there will be lots of fruit here next year. We have no railroad yet, but one is under construction now. I would like to exchange postals, letters and photos with all the Cadets.—A. N. Fiker, Omak, Wash.

DEAR CADETS: I am a happy farmer's daughter, about 16 years old, and I live with my parents on an 80-acre farm in estern Colorado. Our principal crops this year were potatoes, beans, sugar beets, onions, squash, apples, peaches, other fruits and vegetables. My father has taken UP-TO-DATE FARMING for three years, and thinks it a fine paper; we couldn't get along without it. Colorado is the best place in the world to live. I traveled from old Missouri to Colorado in a covered wagon, and had a fine trip. I saw the hot water springs and the beautiful mountains, and bears and wolves and all kinds of wild animals, while we were traveling. I have 8 brothers and 2 sisters and I would like to hear from all the Cadets; I will answer all.—Eliza Bessie Tilley, Olathe, Colo.

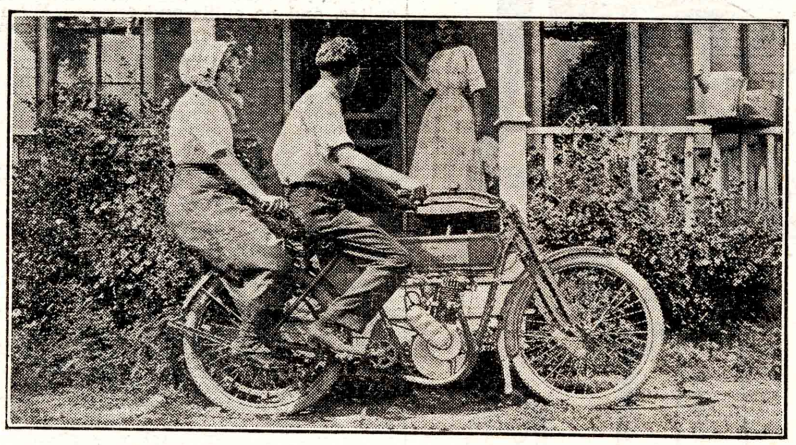
DEAR CADETS: I am a happy farmer boy of 25 years. We live on a farm of 120 acres. Our principal crops are corn and oats, wheat and potatoes. Our corn yield this year was 65 bushels per acre, oats 40 and wheat 20. We have 16 head of fine horses, 12 of cattle, and 60 of thoroughbred hogs. I do not take UP-TO-DATE FARMING, but my brother does, and I will gladly exchange cards with other boys and girls.—William Flaharty, Logan, Iowa.

DEAR CADETS: I am 14 years old, and live on a small farm of 42 acres. We moved from town about two and a half years ago. We all like UP-TO-DATE fine, and a year ago I got up a club of 8 subscribers. I am going to send in a new subscriber in about a week so as to become a Pioneer of Equity. I wonder if all of you read the continued story which closed recently. I thought it was very good indeed. I would like very much to hear from the Cadets.—Virgie Beeker, Pleasant Hill, Mo.

DEAR CADETS: I am 19, and live with my parents on our farm of 320 acres. Our principal crops are corn, flax, oats, wheat, barley and potatoes. I am working for better farming, and the producer to the consumer marketing system. In this I am with you, and will be glad to answer cards and letters from the boys and girls.—George Asoph, Jr., Tennis, S. D.

DEAR CADETS: I have been reading our paper for some time, and think it very interesting, especially the Cadet letters. I am 18 years old, and have lived in this town all my life. We live 7 miles from Mauch Chunk, which is famous for its beautiful scenery and high mountains. It is called the "Switzerland of America." I wish you Cadets could go with me sometime to Flagstaff mountain, which is 600 feet above sea level, and from there we can look right down into Mauch Chunk. I would like to exchange cards or letters with the Cadets or readers, and will answer all I can.—Mabel Deppe, Bowmanstown, Pa.

DEAR CADETS: I am a farmer's daughter, 16 years old. My father and uncle own a farm of 112 acres, on which we raise corn, potatoes and oats. We also have a large dairy. I am very glad I was brought up on a farm, for it is the best place to live. I have a brother and sister both younger than I. I play the piano, and my brother the cornet; we play for our church festivals. I also do all kinds of embroidery and sewing. I am very much interested in UP-TO-DATE FARMING, and would be pleased to exchange view postals or to correspond with



PLENTY OF ROOM FOR TWO—BUT NOT FOR THREE

any of the Cadets.—Amanda Mae Putnam, Fonda, New York.

DEAR CADETS: I am a farmer's daughter of 15 summers, and enjoy farm life very much. I live on a 66-acre farm in the eastern part of good old Nebraska only a short distance from Omaha. Our principal crops are corn, oats and wheat. Alfalfa is also raised in this part of the state. We have taken UP-TO-DATE FARMING for nearly a year, and I enjoy reading the Cadet letters. Would like to exchange letters or postals with the Cadet boys and girls.—Esther L. Reed, Fort Crook, Neb.

DEAR CADETS: Here comes a boy from Camden county, Mo. I read all the Cadet letters with great interest. I think UP-TO-DATE is a great paper. I live near Hahatonka Park, which is a great place for natural scenery. We now live in a small village, where my father runs a blacksmith shop, but I would rather live on the farm, as we own a farm of 120 acres. I expect to farm when I become of age. I am now 18, and would like to exchange letters, cards or photos with either boys or girls.—Craig Byler, Chauncey, Mo.

DEAR CADETS: I am a country boy 22 years old, and would like to join you. I got up a club of 8 subscribers for you, and I like the paper fine. I live in Woodford county, Ky., in the Bluegrass region, and would like to receive letters from the girls and boys.—Oscar Duvall, Midway, Ky.

DEAR CADETS: Here comes a South Carolina girl to chat awhile. I have been a reader of UP-TO-DATE FARMING for almost a year, and I think it is a grand paper, that every farmer should have. My father is a farmer, and enjoys reading the paper very much. I have lived in the country all my life. I enjoy the city, but I am always glad to return to the country. I am 18 years of age, and have 4 sisters and four brothers. I like summer because we have so many summer sports. I like flowers very much. Hoping to hear from the Cadet boys and girls, and promising to answer all cards or letters.—Rosa Jordan, Conway, S. C.

DEAR CADETS: The man where I work takes UP-TO-DATE, and I always enjoy reading the Cadet page. I am a boy of 18 years, and we live on a farm of 200 acres. I will be glad to answer all letters I receive.—Clyde Rosenberry, Union City, Mich.

DEAR CADETS: Will you let a blue-eyed girl of 16 summers join you? I have neither sister nor brother, and at times I get lonesome. I am a lover of music, flowers, birds and animals. We have taken UP-TO-DATE only a short time, but we like it very much. I enjoy reading the Cadet letters more and more every issue. I will be delighted to exchange cards and letters with the girls and boys.—Esta M. Dishong, Spencerville, Ohio.

DEAR CADETS: Will you please allow another Illinois orphan girl to become a Cadet? My father died when I was 9 years old, and my mother, brother and sister and I live on a farm of 60 acres near Benton, Ill., where I have lived for the past 10 years. I am 17 years old now, and my brother and I have done the farming for the past 8 years. Our chief crops are corn, wheat, oats, hay, clover, potatoes and apples. My sister is a school teacher, and takes UP-TO-DATE FARMING, which I think is a grand paper, especially the Cadet page. I like to read the letters, and think the editor should have great praise for thus helping the young people. I go to a county school half a mile from home. I would like to receive cards from every state in the Union, from either boys or girls, and will answer all I receive.—Cora Duckworth, Benton, Ill.

DEAR CADETS: I have read with interest your letters for a long time. It is kind of Mr. Everitt to dedicate this page to the pleasure and benefit of us young folks. I am not a farmer's daughter, but I would gladly change places with one. I like UP-TO-DATE fine, but the best part is the Cadet page, and I promise to become a Pioneer before January 1, 1913. I love to hear the boys and girls say they like farming. I am a girl, but I like the society of good boys. My next birthday I will be 16, and would like to hear from the Cadet boys and girls.—Elizabeth Russell, 1848 Norwood Ave., Toledo, Ohio.

DEAR CADETS: I will be 18 years old next March. We live on a small farm 5 miles from Amboy. I enjoy farm life very much, especially in the summer when we can have such nice vegetables to eat. We take UP-TO-DATE and enjoy it very much, especially the Cadet page. I think it a fine paper, not too large but just a nice size. I am a member of the Wesleyan Methodist church at Pleasant Grove, and I like to take part in the various church entertainments we have. I would like to exchange cards and letters with the Cadet boys and girls.—Ruth Jackson, Amboy, Ind.

DEAR CADETS: I'm a country pumpkin, 17 years old, and as green as a gourd. I like UP-TO-DATE better than any farm paper I ever read, though I can't read anything but the pictures. Ma says she don't care for the girls writing to me so long as they don't go to kidding me; and pa says I can have his tobacco tags to buy postage stamps. He uses lots of it, too. I'm over 5 feet tall, got blue eyes, and gee, what a memory! I can remember the day I was born. Pa and ma had spent the day at a neighbor's, and when they came home the nurse held me up before pa and said "Ain't he a peach?" Pa frowned and said, "Yes, and I'm glad he ain't a pear (pair)." But I must stop, for the cows are coming, and they'll eat me for grass.—Howard B. Gray, Wheeling, Ind.

Death Will Come

We regret to learn of the death of the wife of Brother C. L. McDowell, of Kiel, Okla. Mrs. McDowell took great interest in reading UP-TO-DATE FARMING, and was specially interested in the letters written by the Cadets of Equity, and in home progress and improvement. Her young friends covered the casket with wreaths of beautiful flowers, and she was laid to rest with all the care love would bestow. She left four sons and one daughter, and thousands of friends.

Difference in Sex

Teacher.—Now, children, speaking of sex, what is "girl," "woman," "man"?

Little Artie.—Girls is females, women is males, and men is just human beans.

He Knew How

Mary—I've ust been reading of a great Boston physician who can tell what ails you by holding your hand.

Jane.—Can't your Joe do that?" My Bob can.

What is Now the Fashion

Up-to-Date Patterns

All Patterns 10 cents each, post paid

No. 5867—Misses' Dress.

Delightful in every particular is this chic model designed for the miss and small woman. It is made in sailor fashion with deep armholes and removable chemisette. The skirt is a four-gored design and the whole appearance of the frock is rich and attractive. Linen, pique, repp and pongee are available materials.

The pattern, No. 5867, is cut in sizes 14, 16 and 18 years. Medium size will require 4¾ yards of 36-inch material and 9½ yards of braid.

5858—Ladies' Dress. This stylish dress is quite simple to make. It closes at the front. The skirt is a three-gored model, with a flounce.

Serge or cheviot can be used to make this dress with the collar, cuffs and flounce of contrasting material.

The pattern, 5858, is cut in sizes 32 to 42 inches, bust measure. Medium size requires 5¼ yards of 36-inch material.

No. 5887—Girls' Norfolk Suit. This delightful little Norfolk suit for a small girl consists of a kilt plaited skirt and a coat which can be made with or without the yoke. It is becomingly box-plaited front and back in regulation Norfolk fashion and has a balet all around. It is finished with a turndown collar and neat lapels. The kilted skirt is joined to a belt and the design may be carried out in serge or mohair.

The pattern 5887 is cut in sizes 6 to 12 years. Medium size requires 4 yards of 36-inch material.

No. 5906—Misses' and Small Women's Dress. This charming frock is designed for the miss and small woman and is one of the best styles of the season. It has the fashionable front closing and is made with revers at bottom. The collar is a pretty feature and it and the revers and turned-back cuffs are trimmed with braid.

Serge, mohair, pongee or silk may be employed in carrying out the design.

The pattern, 5906, is cut in sizes 14, 15 18 years. Medium size requires 6½ yards of 27-inch material with 2½ yards of braid.

These patterns are guaranteed; there ar e none better at any price. Full directions accompany each. All you have to do is to give number and the size you want and write your name and address plainly. Address Pattern Desk.

TELLING ABOUT FLORIDA

THIS time of year in the north people's thoughts and faces naturally turn towards the south. The following racy letter from a 13-year-old boy must strike a responsive cord in the hearts of many of our readers, and it carries with it no little information about the famous "Land of Flowers":

DEAR UP-TO-DATE: I got your "Mama" and "Papa" doll for my little neice by raising a club a year ago. Papa surely likes the paper, as do all the subscribers. I see a letter from Viola Blackburn of Kentucky, who says she goes south in the winter. I wonder if she comes to Florida? My mama came from Hopkinsville, Ky., and my papa from Alabama. I have never been out of Florida since I was four years old. I would like to go to the up-country, but mama says it's too cold in the winter and too hot in the summer. We live in Pasco county, which is called the Hills of Florida, because of the hills; and we have good water. But we have lakes in which there is good hook and line fishing. Our place in Dade City is but three blocks from the downtown stores, but in a field we don't cultivate, quail and rabbits make their home. We have two large chicken yards, and the blue jays, mocking birds and red birds eat with the chickens. We call our home Wood's Tavern, and mama keeps boarders.

We think we live in the best part of Florida, for we have fine water and no mosquitos, and no chills and fevers. We raise all kinds of fruit. Right now (November 8) we have strawberries, guavies and oranges. We have thirty-five bearing orange trees, three grape fruit, three tangerins, one lemon and one kumquat; all full of ripe fruit. When they begin to get scarce, we'll have Japan plums, then peaches from the last of April to August, then pears, Japan persimmons and oranges again. Mama says there is no use to make jellies and put up fruits as we have fresh fruit all the time. We had for dinner today (November 8) turnip greens, snap beans, egg plant, Irish and sweet potatoes, tomatoes, stuffed peppers, okra, beets and home raised chicken. Chickens don't have gapes down here. Mama raised forty-five turkeys one year right here in town. Last year we raised eighteen geese, but they got troublesome, and we disposed of them. We have six churches, a fine large high school, and the South Florida Normal. But our ladies don't know how to play "bridge," and we had not had a dance in twelve years until a new hotel was opened, and then they had a ball; but they had to import the music band and the dancers. We have a band, but they don't play dance music. We have two newspapers, a baseball diamond, three hotels, three boarding houses, two restaurants, one bank, a fine new court house, and two railroads, one on each side of the town. So if any of you come to Florida, don't forget Dade City. If you don't believe it, come and see, and at Wood's tavern you will find.—Alex Clark Woods.

Cadet Benefits

DEAR EDITOR:

So you want us to tell you how we have been benefited by the Cadet column? Why, my dear friend, "The half can ne'er be told." I will relate my side of the story. Imagine yourself cooped up in a lonely farm house—no communication with the outside world except by aid of the telephone, no one to see outside the family but the mail carrier, who only stops long enough to leave a paper, magazine or circular, then someday he begins to leave a box full of pretty cards with cheerful greetings, letters full of sunshine from the bright warm south, and west; tales of hunting, freighting and gold mining from the frozen north, scholarly letters from the east. Oh, I can't begin to tell you all, one day I received cards from Maine, Oregon and Texas, and I appreciate them all so much. Some besides letters send newspapers, or clippings. These all give us something to think and talk about. I assure you I think a great deal of our Cadet column and my Cadet friends.—Elsie Cook, Belle Rive, Ill.

Traveling Mail Box

The handiest thing out for those who live on rural routes. Saves time and danger to health. Simply turn a wheel and bring your mail direct to your door. It's worth looking into. Write the manufacturers, Oakwood Manufacturing Company, 18 Stanton Avenue, Springfield, O.

Grand Invention!

No More Wash Day

EASY METHOD Of Cleaning Clothes

Cleans Family Wash in 30 to 50 Minutes—Woman's Hardest Work Made Easy—No Motors! No Chemicals!

NOT A WASHING MACHINE

DOES THE WORK IN ONE OPERATION

SEE HOW SIMPLE—DIFFERENT, EASY. Put on any stove—add water, then soap, then clothes—**move knob occasionally.** In 5 to 8 minutes first batch washed—next batch same way, same water—in 30 to 50 minutes family wash clean. **No labor, no injury to clothes.**

Cleans woolens, flannels, blankets, or colored clothes, as well as white goods, finest laces, curtains, bed clothes. **Saves time, fuel, labor.**

EASY WAY in 30 to 50 minutes cleans washing which before took entire day. All metal, strong, durable, sanitary, light in weight. Easily used, cleaned, handled—always ready. Child or weakly woman can use it. Saves washday drudgery.

Users Praise the "Easy Way."

J. McGee, Tenn., writes:—"One young lady cleaned days washing in one hour with Easy Way—another in 45 minutes." Mrs. T. Bullen, Canada, writes:—"I washed bedding, heavy quilts, curtains, etc., without rubbing." Lauretta Mitchell, O., writes:—"Done a big washing in 45 minutes—sold 3 already." A. D. Poppleton, N. Y.:—"Gives perfect satisfaction. Washed bed quilts, greasy overalls and fine clothes. Greatest thing on earth." F. E. Post, Pa., writes:——

TWO WEEKS WASHING IN 45 MINUTES

Clothes cleaned without rubbing." J. H. Barrett, Ark., after ordering 38 Easy Ways, says:—"You have the grandest invention I ever heard of." J. W. Myers, Ga. says:—Find check for 12 Easy Ways. Greatest invention to womanhood, forever abolishing miserable wash day. Sells itself."

AGENTS GETTING RICH

R. O. Cowan, N. Y., placed 13 in 6 hours—(profit $39.00) Mrs. J. Brown, sold 10 in 3 days—(profit $30.00.) K. J. Blevins, O., writes: **"Made 7 calls, sold 5 one day"**—Profit $15.00.) R. H. Latimore, Pa., writes: "Sold 4 this morning. Never yet turned down." A. G. Witt, Pa., "Received Easy Way yesterday; sold 4 today—not out for orders." Mrs. Gerrish, Mont., ordered sample, then 1 dozen, then 100—(profit over $300.00.) **Just made one shipment 1000 Easy Ways** to Russian agent. N. Boucher, Mass., orders 75 more, says: "Everybody wants one, best business I ever had." A. S. Verrett, La., sold 8 in one day—(profit $24.00.)

FREE SAMPLE To Agents

We want managers, agents, men or women, home or traveling, all or part time, to show, take orders and appoint agents. **Easy Way new article,** not worked to death. Best seller out. Every family wants one. People glad to see it demonstrated; buy without being asked, and throw away costly washing machines to use it. **Only 2 sales a day means $36.00 a week profit.**

Price only $6.00 ready for use. Sent anywhere. Not sold in stores. Order one for your own use. Send for Free Sample offer, special agent's proposition, etc. **Costs nothing to investigate.** Send name and address anyway for full description. Write today. **Harrison Mfg. Co.,** 2339 Harrison Building, **Cincinnati, O.**

CROFTS & REED CO., Dept. D233, Chicago

Department of Farmers Organization

A Personal Message from the President

of the Farmers Society of Equity

A Prosperous, Happy New Year and the completion of the F. S. E. in 1913!

"The average farmer would rather mush around in the mud than to read and study business methods."

—o—

That is what one of our readers wrote in a recent letter. We hate to think that it is true for any large percentage of the farmers, but we are forced to concede the justice of the charge.

—o—

But this is no argument why that part of the agricultural class must not be saved, because it is equally true that comparatively a few in any great class of people must do the work and furnish the saving grace to rescue the whole body of the people. We would not be taking a reasonable view of the matter if we would make agriculture an exception.

—o—

Also, as soon as we admit that this is true, then we must also admit that because of this fact the need for a business system for agriculture is emphasized. For instance, if every farmer was sufficiently wide-awake and enterprising, even though he worked alone, the agricultural conditions would not be so bad. But it is for those who are either unable, because of lack of ability or enterprise, that farmers must have a business system. When farmers have their own business system, then these people can delegate their appointed agents to look after their business for them. When that time comes, the rank and file of farmers can be justified in giving all of their attention to producing, because they know they have their machine of marketing, and it is equipped with the right kind of people to run it successfully, and they will know that if they put their produce in the hopper of their marketing machine, that their rewards will return to them.

—o—

So, if we admit that the average farmer gets a bad case of headache when he reads and studies business methods a little, we can see why such farmers should be the very first ones to connect with the Farmers Society of Equity so that they will have their vital marketing matters attended to without any personal effort. When a crop is raised, all that will be necessary for that farmer to do will be to step to his telephone and notify his business agent how much he has, and be ready to haul it to the market point when he receives his instructions.

—o—

Wisconsin is the third state in the production of potatoes this year. Her crop is given in the last government report as 33,455,000 bushels. New York state is first in production and Michigan is second. Of the total production Wisconsin produced this year a little less than 10 per cent. The Wisconsin potato growers met at Waupaca, Wis., on November 15 and 16 and organized a State Potato Growers Association. Our informant says: "Potato growers were present from many sections of the state, and were alert on every proposition intended to give them more knowledge about the growing of potatoes." We notice in the list of speakers that there were six with "Professor" before their names. One speaker was the industrial commissioner of a railroad line, then there were three other speakers without titles, and they may have been potato growers.

—o—

We have scanned the report of the convention carefully and while we find the whole subject of the potato from the time it was discovered in its wild state down to the present time, including discussions on the best climate, the best soil and the best fertilizers to grow potatoes, we could not find a single word on the subject of marketing the crops.

—o—

A professor of horticulture was elected president of the association. In its declaration of purposes are the following:

To promote improvement in the raising of pure varieties of potatoes for commercial purposes.

To give special attention to seed improvement.

To improve sorting and grading methods both on the farms and loading stations.

To promote the community plan for raising desirable varieties and to the elimination of undesirable commercial types.

To promote better cultural practices in the line of maintaining fertility and the extension of the industry upon the new soil in the state.

To combat diseases and insect pests of the potato.

To provide for an annual convention and potato exhibit.

To organize local associations and provide such affiliation as will benefit the potato industry.

The membership fee was placed at $1.

—o—

The moral we want to point out in this will be evident when we present the following figures:

—o—

The Wisconsin potato crop of 1911 was given by the government as 32,480,000 bushels. On December 20, 1911, the price on Wisconsin potatoes at Chicago, averaged 84 cents a bushel. Therefore, on December 20, 1911, the price of Wisconsin potatoes had a value of $27,583,200.

—o—

The final government report on the Wisconsin crop this year is 33,650,000 bushels, and the average price of Wisconsin potatoes in Chicago on December 20, 1912, was 44 cents a bushel. Therefore, the value of the 1912 crop is only $14,806,000.

—o—

The point is that while the crop of potatoes in Wisconsin is only about a million bushels more than it was last year, it is much larger in the whole country than it was last year. The effect of this, and the lack of control in marketing, has made the crop this year worth only about one-half as much as it was last year. For the Wisconsin growers, $12,777,000 less. But these figures do not tell the whole story, because last year the price advanced steadily until the end of the marketing season and reached about $1.50 a bushel, but the tendency this year is all downward.

—o—

When the actual farmers can be awakened to the true conditions, they will ask the professors and railroad men who teach nothing but more production, to go away back and sit down for a hundred years.

—o—

Apropos of this matter, we quote from the testimony of Mr. J. P. Morgan, who was examined recently by the federal investigating committee at Washington. He said:

I would rather have combination than competition. I like a little competition but I like combination better. Control is the important thing. Without this, you can't do a thing.

—o—

Farmers will be wise if they take advice from this successful businessman who is probably the richest man in the world. "Control" is the important thing with farmers as it is with capitalists, with railroads and with manufacturers. That is, control of their industry, control of their products. Such control as will make people, who are obliged to have what the person controlling produced, come to that person to get it. That is what this paper has been teaching to farmers. So we say that they will be wise if they take the advice of this successful business man and control what they produce—set the price on it and let it out whenever the price will be paid.

And when they do that, they will not strive to increase the production

The Farmers Society of Equity

Is a farmers' organization, incorporated, headquarters, Indianapolis, Ind. Its first and greatest object is *"To obtain Profitable Prices for all the Products of the Farm, Orchard and Garden.*

National Officers and Directors

Pres., J. A. Everitt, Indianapolis; V.-Pres, W. H. Mitchell, Hutchinson, Kas.; Treas., National City Bank, Indianapolis; Sec., M. K. Sleight, Indianapolis; National Organizer, James E. AMERICAN TELEPHONE & TELEGRAPH CO. LOCAL LONG DISTANCE TELEPHONE BELL SYSTEM AND ASSOCIATED COMPANIES

Seven Million Watch-Towers in the Bell System

The original campanili were the watch-towers of old Venice, guarding the little republic from invasion by hostile fleets.

Later, bells were mounted in these same towers to give warning of attack and celebrate victories.

Judged by modern telephone standards, such a system of communication seems crude and inadequate.

In the civilization of today a more perfect intercommunication is essential to national safety, convenience and progress.

The Bell System binds together a nation of nearly one hundred million people, by "highways of speech" extending into every nook and corner of this great country.

Seven million Bell telephone stations are the watch-towers which exchange, daily, twenty-five million messages for the happiness, prosperity and progress of all the people.

My vanadiumized engine is your money-saver, your time-saver and your labor-saver. You try it first absolutely free to see how you like it. I trust you. Write now for particulars of our easy payment plan.

Send No Money Write for particulars of this free offer. This is your chance to try out a vanadiumized engine free, at my expense. Write for all particulars. Just send your name on a post card or letter. But write today.

L. C. KUHNERT, Jr., Pres.

L. C. Kuhnert, Jr. Co. Dept. 3105 Chicago, Ill.

without limit. But knowing what the demand is, they will produce to equal the demand, or if they produce more than the demand, they will still control it—hold it over against the short crop years. The only difference between the Steel Trust and the farmers, is that the former controls the steel, while farmers dump their crops onto other people. The Steel Trust constantly keeps the demand waiting two, three, four or five months to have its orders filled. Thus there is always a hungry demand and it is the simplest problem in the country to decide the price and get it under such conditions. The Steel Trust has a number of plants that are not running. It could start them up and in a short time make an over-production, just like the farmers do sometimes. Don't understand that we advise the farmers to hold their products off of the market two, three, four or five months after the demand really wants it, but they must hold the surplus off of the market, until the demand of consumption seeks it, ignoring the other demand from speculators.

—o—

We have referred to the fact that spring wheat has been selling at about twenty cents a bushel below the price of winter wheat, although the relative merits of the two kinds of wheat for flour are practically the same, or if anything, in favor of the spring wheat being the more valuable. This is because the crop of spring wheat was large and the crop of winter wheat was small. A result from this is seen in a dispatch from Grand Forks, N. D., of December 18, as follows:

At the present time North Dakota banks have deposits approximating $73,160,000. This is greater than ever before, but the gain in deposits this year was not as great as a year ago in spite of the fact that this season's crops were enormous. This is laid to the fact that prices for grain are so depressed by the big yield, and the aggregate returns to the farmers are not as heavy as they were in the former period. So the low values prevented what under ordinary years would have been a big in? crease in deposits.

—o—

So we say again, what do big crops benefit the farmers over moderate crops, providing they bring them less money? Also, bankers and business men should see this thing, and if they will not help the farmers to get in a condition to market right, so that they will get enough money, they certainly should see that it is against their best interests, that is, against the deposits in the bank, and selling manufactured commodities, to spend their time and money in teaching farmers how to produce more. Would it not be better to spend their money to teach farmers how to produce less, if they are wise to their own best interests, and if they are positively determined that marketing conditions shall not be improved?

—o—

And growers of potatoes and wheat are not the only people who suffer. The stock growers are also beginning to feel the pinch of glutted markets because of lack of control and systematic marketing. For instance, on Monday, December 16th, an excess in supply of cattle reached the Chicago market. The market broke from $8 to $14 per head under what they sold for the week before. And those shippers who had their cattle on the market and refused to take this price fared no better by holding, because there were thousands of cattle held over that continued the glut for several days. The place to control is not on the market, but at home. The Chicago Daily Farmers' and Drovers' Journal, commenting on the glut, said this:

The cattle market plainly needs a chance for recuperation. There needs to be a meager receipts from now on until the opening of the new year. When one day's session of the market can wipe out the season's profit to such great extent as was witnessed in the initial day's trade this week, it is indeed time for holders of half-fat steers to soberly reflect upon conditions facing them. Is there not cause to believe that winter markets, if properly supplied, and not over-supplied, will afford the feeders fair profit? And does the consumer get an opportunity to buy his beef cheaper? Oh, no, that cheap beef, bought at wholesale, goes into the freezers, to be held for the anticipated period of short supplies of raw material. There is no reason sufficient to warrant the livestock men cutting loose with abandon and flooding a badly over-stocked and weakened market. It is time for serious reflection. The buyers stand ready to do more price-cutting. Is the country willing that it shall be done?"

—o—

Several months ago the Commercial Club in Indianapolis appointed a committee to investigate the prices of food commodities in Indianapolis and in other cities of the same class. This committee reported a few days ago. It found, according to its report, that the cost of living was not higher in Indianapolis than in other cities of the same class. But, except for a few commodities, the prices were lower here than in the other cities compared. But the most interesting part of the report to us was in reference to the abundance of gold contributing to the high cost of living.

—o—

The report said:

It is stated as a fact that the production of gold in the last decade and a half has been greater than in the four hundred years preceding. With this fact before us we may not have far to look for the first great cause of ascending prices. Following this constant stream of an increasing gold supply, has been a series of prosperous years, contributing not only to the high prices of living, but to the cost of high living."

—o—

In this connection let us ask why the increased supply of gold makes the prices high for the consumers, while at the same time we see that the price to the farmers is lower than it has been for years. In other words, how can this rule operate at the consuming end of the proposition, one way, and operate just the reverse way, or be inoperative, at the other end? Also, will the gentlemen of the committee explain the golden rule, which makes the price of eggs to the farmer in April, May and June at 12 cents a dozen, and the price to consumers for the same eggs in December and January at 60 cents a dozen? Also, we

"Your editorial in December 1st issue of Up-to-Date Farming, entitled "Do They Know What They Do," I have read very carefully. I consider it the finest article I ever read on the market situation. You have explained fully the farmer's greatest needs."—Chas. E. Helphrey, Bristow, Okla., County Union Secretary.

"I wish to say that I am quite thoroughly convinced that the aims and objects of the Farmers Society of Equity are most commendable."
Truman O. Smith, Loxley, Ala.

J. A. EVERITT, Pres., Indianapolis, Ind.

DEAR SIR: We, the undersigned members of the Farmers Society of Equity, do hereby extend to you our best wishes and sincere thanks for your long, hard and honest work in our behalf. To materially change your plans would make a mess of the job; furthermore, we promise you that we will do all we can to assist you in your grand and glorious work.

JOHN FREEMAN

would like to know just why the increased supply of gold makes the cost of potatoes in Alabama $1.25 a bushel, as we are reliably informed they are at present, and only 30 cents to 35 cents a bushel in Wisconsin and Michigan, with a 20 cents a bushel charge for freight between. In short, why does the increased production of gold operate to elevate the prices of the necessaries of life at the retail or consuming end, while it does not have any effect at the producing end, or if it does, its effect is the reverse, and lowers the prices?

—o—

We still think that Morgan is right, "Control is important," and the man or set of men who control a commodity, is the man who directs the law of supply and demand, and makes the prices arbitrarily regardless of the production of gold or anything else.

—o—

So the problem is one of control, and we may ask, what is more natural than that the producers should control their own commodities until they can place them on the final market of consumption? And we will also ask, what is more unnatural, although it has been the fashion, for farmers to produce the stuff and then turn it over to another class of people to control for them and thus place in their hands the power, irrespective of gold production, to rob the maker of his rightful reward and exploit the final consumer to the limit of inordinate greed?

—o—

What would be more natural than for the farmers of each community to get together in an organization, collect the different classes of produce, supply the market with all that it needs for immediate consumption and place the balance in storage for their own account, to be brought out between seasons as the legitimate demand and consumption asks for it? Although it is the fashion, we will ask, what is more unnatural than for the farmers to do all the work of producing, which is the hard work, and for which they are paid the meanest wages of any class of people, and then employ a set of people who produce nothing, to do the easy work of marketing, and pay them more for doing it than the producers receive for all of their work? Here is an illustration:

—o—

The dairymen around our large cities receive an average of about 3½ cents a quart for milk. The consumers are paying an averoge of about 8 cents a quart. The cost then of marketing is 4½ cents a quart, and the dairymen permit this condition to continue year after year, because a few big operators, like the Borden Milk Company, have gotten in control of the distributing agencies.

—o—

There may be a milk trust, and we believe there is. But we want to say that the producers of milk can down any milk trust that is in existence, in a fraction of the time that the government can do it. Also producers can do it in a way that it will never be possible for the different parts to grow together again and be more harmful than the original.

Of course, all this means co-operation. And the way to co-operate is to get ready for it. We are glad to say that farmers are getting ready now faster than for years, but they can do far better yet. We wish each reader of this paper believed that he can forge one of the links in the chain that is going to bind all producers in co-operative effort, right in his community and that he would then send the coupon on page 20 for instructions, at once.

The Weight of a Bushel of Potatoes

Isidor Wulfson, inspector of weights and measures, of Indianapolis, says: "I'll bet H. E. Barnard, state sealer, his experts, the United States government and the President himself that potatoes do not weigh sixty pounds to the bushel and it isn't fair to the dealers to make it so and what is not fair to the dealers is not fair to the best interests of the public. Nature did not make potatoes weigh sixty pounds to the bushel. It may be possible to pile them up, when new, so they will weigh that much but when the water in them has partly evaporated and they can be classed as old potatoes, I care not how high you pile them you can not get enough in a bushel basket to weigh sixty pounds. Indiana might just as well have no law at all as to have have one prescribing that sixty pounds of potatoes make a bushel." In his annual report to the state sealer Mr. Wulfson is going to make certain recommendations for changes in the state laws on weights and measures.

The White Combination Car

This Car Will Give You More Practical Use, More Comfort, More Pleasure, Last Longer and Cost Less to Run, Than Any Car Built

A Roomy Carriage and Large Motor Wagon in One

There is no car built that so perfectly meets your every requirement. It carries eight people easily and conveniently, with plenty of room besides for lunch baskets or hand baggage. Its seats, (which are deep and comfortable) can be easily removed by one person in a couple of minutes, and the wagonbox body utilized for baggage, merchandise, or anything that the ordinary road or spring wagon would be used for, up to a load of 1500 pounds.

Its Riding Comfort and Ease of Operation

Its excellent springs, light weight (considering its capacity) and its perfectly balanced body, make this car unsurpassed for comfortable riding qualities, and as easy to steer as a light roadster.

Enough Speed and Power to Meet Every Condition

There are very few, even of the fastest touring cars, that can pass the White Combination Car on the road. And even when loaded to full capacity this White will climb hills at a steady road pace, that the ordinary car will have difficulty in climbing at all.

The Reliable, Economical White Engine

If you have driven a White, then only can you understand, how simple, quiet, powerful and economical is the White engine. It was the first, and is still, the only practical long stroke, cast-in-one-piece engine in this country. Its fuel consumption is so low under all conditions, that regardless of price, it is the most economical engine made, and its performances in daily service in thousands of White cars is worth investigating, in fact, the rise in the price of gasoline is not felt by White owners. Its compact simplicity with no parts exposed to dirt or injury, removes all of the chief sources of care and trouble, and necessitates little or no attention being given to it.

Body Upholstery and All Fixtures Beautifully Finished

The finish, material and workmanship on this car, is in every detail true to the White standard,—the highest. The spring seats are roomy and comfortable, and are upholstered with the best leather, while the body finish is done with that attention to detail that has made the White cars famous for their excellence.

The Material and Workmanship of the Highest Grade

The chassis, including engine, transmission, axles, gears, bearings and wheels, is constructed with the same care and excellent material that has characterized White products for over fifty years—and has made White automobiles of every design second to none in the world.

Consider What This Car Means To You

Stop and think to what practical and pleasurable uses this car can be put, both in hauling and touring. You will find that it will more than take the place of a touring car, a spring wagon, a service wagon and two teams of horses combined. Just write us today or use the coupon below, and we will send you complete details of the White Combination Car.

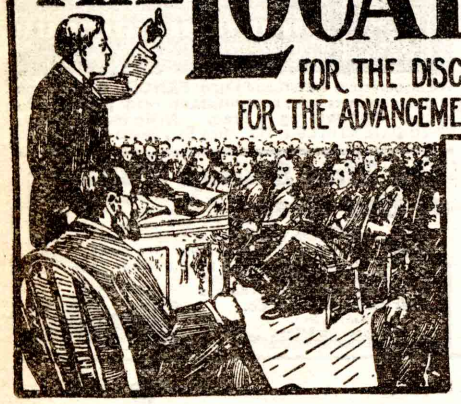
THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE LOCAL UNION

The Local Union of the Farmers Society of Equity is the home workshop of the Society. In it must be shaped the plans and work that will revolutionize American agriculture and usher in the time when the tiller of the soil shall no longer be a mere "hewer of wood and drawer of water" for others, but when he shall be a more important and more independent member of society. Through the local union, assisted by headquarters and representatives on all the great markets of the country, all the *business* of the members—selling and buying—can be done.

How to Organize a Local Union

Whenever a reader of UP-TO-DATE FARMING reaches that condition of mind that he believes the farmers of his community should do more of their own business of selling and buying, instead of paying an enormous price to have it done by middlemen, he should send for instructions for organizing a local union. Any person who stands well in his community can organize.

A local union is wanted at every town, city and shipping point where not already established. Send for instructions, rate of compensation, blanks, etc., to facilitate sending we append a coupon here. If no local union at your town send the coupon.

FARMERS SOCIETY OF EQUITY
Indianapolis, Ind.

Gentlemen: Please send instructions, rate of compensation, blanks, etc., for organizing a local union at

"THE TRAVELER'S DESK"
CARE THE FARMERS SOCIETY OF EQUITY
INDIANAPOLIS, IND.

I RECENTLY had a consultation with a broker who handles vast quantities of goods from manufacturer to wholesaler. He says there's a change coming. All big business feels it. Business men who in the past have shown they have ability to look ahead are holding their ears to the ground, and they say there's going to be a change. Now, fellows, see here! These changes come, sure as fate. They have come in the past, and they will continue to come in the future. Big business sees a chance to revolutionize business methods, and they do it. Little business has to get out of the way, or be run over. The organized people take care of themselves. The unorganized are crushed to the wall. Now, then, in the change that is coming, who will look out for the man who hoes corn and digs potatoes? Where will he come in, or come out? His only chance is his national organization.

The change that is coming will affect our interests. It has to do with every person who buys or sells. This high cost-of-living business is one of the chief factors in it. Something is going to be done to change that. And let me tell you, though I'm no prophet, I know where the farmer will come out, unless he builds up his own organization to protect himself. Older nations than ours have a peasantry. And there's a class in the United States of America who would like to see farmers of this country made peasants. They are struggling to get control of affairs so they can make them so. They would do it in a minute, if they dared, but are not yet ready. They are organizing, centralizing, gathering in the control, ownership and management of all our public utilities. They make the prices on what you have to buy, and sell. They can make you peasants when the time comes, because they can control your profits, your cash reserves, your bank accounts. You are unorganized, and can do nothing. They are organized, and can do every thing. They bear down all they dare, and you shoulder the burden. There's been fairly good times in the past few years, because of the great and rapid development of business. During this development, the controlling class has gained a position of great advantage. Now a change is coming. What will be your position when the change has come? Will you be more prosperous, or not? Will your interests be advanced, or not? Will you continue to get good prices, or not? What assurances of your own future welfare have you, anyhow? Think it over, men.

* * *

Edmund Thorp, Hotchkiss, Colo., writes: "I have read all your literature very carefully indeed, and think the plan proposed by your Society is an ideal system and a practical one. We raised and shipped 3,600 cars fancy boxed apples from this county last year. We are wholly at the mercy of the organized commission men."

* * *

During the annual meeting the following telegram was received from Organizer S. L. Howard, Clarksdale, Miss.: "Headquarters, F. S. E.: Reserve six counties in Mississippi as my district."

That man means business, boys. He has been making things lively down there lately, and has his work well in hand. Mississippi will have a state union before very long.

* * *

C. C. Cowell, president of a Fruit and Truck Growers Association, at Pearland, Tex., writes: "Will you please send us full information about the Society of Equity at once. We have a fruit and truck growers association of about fifty members, and can raise almost every kind and class of fruit and vegetables. Our greatest trouble is the markets and prices. I believe farmers must co-operate in order to get what they rightfully should have."

* * *

Brother Southworth is putting headwork and system in the game in Southern Idaho. He is a gentleman of high intelligence and broad experience in working in farmers' organizations. He was a Granger of national reputation. Mr. Southworth says the Equity movement is the greatest ever instituted in behalf of agriculture, and that our system of both organization and market control will win. He convinces every community in which he works, and reports a new local at every point he visits. He merely knows the facts, presents them in a way farmers can understand and then brings them into the fold. With Cutting, of Portland (now national organizer) Morris, of Oakley, Stryker of Corvalis, the northwest will soon have a district organization of which these men, headquarters, and all farmers, may well be proud.

* * *

C. C. Hicks, Secretary of Boley (Okla.) Local 6774 writes: "We are putting forth every effort for membership. We pledged our state union that we will report one hundred or more new members before the next twelve months and we are going to do it."

* * *

G. S. Pratt, St. Johns Park, Fla., writes: "We bought our fertilizer co-operatively, at a saving of $5 per ton; 200 sacks seed potatoes, and saved $380 net. We are now getting prices on barrel material. We put three large orders for feed and groceries through our local dealers, and secured a saving of 25 per cent on two of them, and a fair saving on the other. We are now getting quotations from the cities to compare with those of our local dealers. We are now getting quotations from the cities to compare with those of our local dealers. We are getting along first class. Took in six new members at our last meeting. For a young local we are getting right down to business."

GOOD ADVICE FROM FLORIDA

Mr. H. G. Gumprecht, manager of the Manatee sub-exchange, Brandentown, Fla., recently gave this advice to orange growers:

"Unless you have fruit that is well colored, don't attempt to ship it, for it won't pay expenses. Because your oranges may analyze seven to one, if they haven't got a nice, full, yellow color, they won't sell. Only the other day, some extra fancy Indian River oranges sold at $1.65 notwithstanding the reputation of this fruit and the fact that it was actually sweet, but it was green on the outside and that was enough to kill the price. You must know that the public demands fruit that is ripe and colored, and this must be your test if you expect to realize satisfactory returns."

Mr. Gumprecht stated the matter correctly, and what is true of oranges, is true of other fruit. The markets are loaded down with inferior fruit and every bushel of it takes the place of nearly a bushel of choice fruit. However, the inferior fruit brings only a trifle, oftentimes scarcely pays for the picking, while if it would not be on the market, a bushel of choice fruit would be taken at a profitable price to all parties concerned.

Report of 1912 Annual Meeting of the Farmers Society of Equity

PURSUANT to the call for the annual meeting, the Farmers Society of Equity, its delegates and members, met at headquarters, 227 West Washington Street, Indianapolis, Ind., on December 17, 1912. The attendance at the meeting was not large. This was expected as we were forewarned of it by the numerous letters received making various excuses for not coming. The chief excuse was the expense that would be involved, and the lack of any provision by our Society to meet such expense. This called forth considerable discussion and it was ordered that it should be more emphatic in the Constitution and By-Laws for local unions, that the regular membership fee and dues can be increased, at the option of the local unions, by such an amount as will meet such contingencies, or provide necessary funds for the local unions. Local unions were permitted to do this in the past but very few have been in the habit of raising any more money than was provided in the National fees and dues, out of which they are permitted to retain a small share. It was recommended that local unions have a monthly assessment against their members of such an amount as will create a fund besides meeting the current expenses.

Notwithstanding that the attendance was not large, the delegates who did meet at headquarters, fully appreciated the importance of the work they were expected to do, and they executed their trust to the best of their ability for the interest of all members over the country, and other farmers regardless of whether they are members of the Farmers Society of Equity or not. We are convinced that all of the agricultural interests of the country will reap direct benefit resulting from this meeting.

The work of headquarters from the time of the 1911 convention was reviewed and the delegates put their stamp of approval thereon. It was particularly gratifying to the delegates to learn that there has been a gradual increase in the development of the organization as the months of 1911-1912 have passed by, and that statistical reports showed that in the last two months there has been such a development as to amount to more than the preceding nine months. And this does not seem to be merely a spurt, but it resulted from the live organizing campaign that is under way. Also the conditions that prevail over the country, and which have caused problems to exist for which a solution is only found in the Farmers Society of Equity have contributed to greater results.

The meeting was called to order at 11 a. m. Tuesday morning. In his address the President referred to many things that were encountered during the year's work but dwelt more particularly on the extension work for the future. He directed the attention of the delegates to the various agencies that are now promoting the welfare of farmers along the lines of greater production and asked the delegates to give special attention to these, and whether it would be wise to seek the co-operation of some of them, such as railroads, manufacturers, and mercantile houses, to assist in organizing the farmers to market wisely, to the end that profitable prices may be secured, and the business interests of those concerned be thus promoted, more than they can be through their exclusive teachers for greater production.

The address called forth much discussion pro and con. For instance, Mr. Lozier, of Alamaba, thought that there was not much likelihood of interesting such interests in organizing the farmers to give them a practical marketing system, but that they were only interested in greater production and were devoting attention to the farmers purely for advertising purposes and without any other motive. Mr. Morris, of Minnesota, took the stand that big crops meant greater demands for farm machinery to take care of them, but he saw no reason why they could not be shown that it is to their advantage to help farmers to market so as to get enough money to buy such machinery.

Mr. Riner, of Indiana, thought it a hazardous policy to approach such firms for assistance in organizing the farmers. He thought the Farmers Society of Equity might be discredited if they would openly advocate its cause of marketing, even though they are openly advocating better farming and greater production.

Mr. Swift, of Ohio, said: "Let farmers attend strictly to their own affairs and take care of themselves. They alone can successfully solve their problems. Let them keep the matter of organizing and their business system entirely in their own hands, and promote it through their own agencies, unhampered by alliances with other interests of any kind whatsoever."

Mr. Stevenson, of Indiana, said: "I have no faith in any other class of business coming to aid the farmers to organize. They have their hands full of their own affairs, and would lend no aid or would give no money without asking favors or concessions that it would be unwise, if not fatal, to grant."

These were some of the objections presented to the proposition to interest other people in the farmers' marketing problems. Others spoke from the viewpoint that farmers should not reject the kind offices of any person or institution that sincerely wished to help them and were willing to spend money to put organizers in the field to educate farmers in the matter of marketing, and bring them in a condition to control their crops, to the end that profitable and steady prices might always be maintained. The result was that Mr. Swift offered the following motion:

"That the Executive Board of the national union be empowered to enlist, if possible, the moral and financial assistance of any or all commercial, railroad or other organizations and institutions, to promote organization, and education amongst farmers, for better methods of marketing, providing no special agreement be entered into with them, but whatever aid is given be unconditional, and any funds donated shall be employed only in such education and organization."

The motion was seconded, and further discussion was had. The general opinion prevailed that the railroads and commercial interests that are now interested in better farming, will see advantages in the farmers having a successful marketing system that will control the prices. As for the railroads it was pointed out that the present system of marketing gluts the railroads and produces car famine in the fall of the year, while there are other months in the year, when there are thousands of cars idle. Also, the fact that when farmers can always secure profitable prices it will be the very best incentive for them to increase production, as well as give them the means for doing it. Further, that crops in the cribs cannot buy agricultural machinery, but when those crops can be converted into enough money to pay their cost and leave a profit besides, the manufacturers and business men find their business will flourish. The motion was finally put and carried.

Minimum Prices

As announced in the November 15th issue of this paper, the problem of Minimum Prices was presented to the convention. It was agreed that because of the great abundance of most crops in 1912 that a greater quantity will need to be controlled than in former years and that the members of the Society might not be able to control enough to compel the prices to be paid. It was the concensus of opinion that there is a real surplus of some crops and to urge our members to hold, while others are supplying the markets might work an injustice to the members. But it was ordered that the editor of UP-TO-DATE FARMING, with the co-operation of the Executive Board of the Society should continue to give advice about prices and marketing as at present. It was agreed that the future prices would depend very much on the weather between this time and the next harvests. If the 1913 crop prospects show unfavorably this winter and next spring higher prices will surely result.

Much time was consumed by reports from the field, which emphasized the necessity for more organizers. Particularly was the demand urgent from the southern states where the 1913 crops of vegetables and fruits will soon be ready again to market. The representatives from those sections showed a dismal picture of the conditions that had obtained this year. The crops were abundant, but as a rule they did not sell for prices to pay cost of production, packages, etc. It was decided that special effort should be made to organize what is known as the Gulf Coast territory. The opinion was general that the planters in that section are ready for organization and that local and county unions of the Society could readily be organized from Texas to Florida.

Motion was made that the convention take up the Constitution and By-Laws for amendment.

Carried.

The following amendments were made: (A new edition of the Constitution and By-Laws will be printed immediately and supplied to all local unions and also members-at-large who apply for it.)

Article 4, Section 1, amended to read: "Accepted into the Society according to its Constitution and By-Laws."

The same section was amended with reference to special members as follows: "It may admit the wives and daughters and sons under eighteen years of age, of members, to special membership, upon terms of its (the local union's) own making."

Section 3 of Article 4, was amended by providing that a five years' membership may be obtained on the payment of $5. This was done to raise additional funds at this time when the Society needs it to push the work of organization, and also it was thought that five year memberships would promote the Society's growth, there being no danger of a member dropping out in that length of time. The member will save $3, because under the regular terms of payment $2.00 membership and $1.50 per year dues, he would pay in five years, $8.

Out of the $5 paid for a membership, with all dues paid, $1 shall be apportioned to the official paper for five years' subscription, and the balance shall be pro rated in the same proportion as provided in the by-laws for the regular $2 membershipf fee.

There was added to Section 5 the following: "That local unions and county unions are expected to collect such an additional amount to place in their treasury as they may deem necessary to meet their expenses, including delegates to conventions."

Section 6 was amended by adding: "Local Unions are expected to add to the $1.50 dues, such a sum as they deem wise to properly support the local and county unions and send delegates to conventions."

Section 14, of Article 4 was amended to read "six months" instead of "nine months." That is a member six months in arrears for his dues will stand suspended without further notice.

Article 7, Section 1, was amended to include after the word "county" in the eighth line "and one representative for each local union in the state."

Section 2, beginning in the thirteenth line and following "all county unions" shall read "county union and local union in the state shall be notified."

The officers elected for the next year are as follows:

President, J. A. Everitt; vice-president, W. H. Mitchell, Hutchinson, Kas.; National Organizer, H. F. Cutting, Portland, Ore.; Directors, Jacob Bretz, Bretzville, Ind.; Robt. Stephenson, Lebanon, Ind.; F. S. Parkinson, Rexburg, Ida.; S. W. Morris, Rochester, Minn., W. S. Shure, Summerdale, Ala.; C. Hayes Taylor, Indianapolis, Ind.; J. A. Harmon, Shawnee, Okla.

The convention selected an Executive Board for the next year composed of President Everitt, and Directors Stephenson and Taylor. Mr. Everitt and Mr. Taylor are constantly at headquarters, and Mr. Stephenson is within one hour's ride of headquarters.

The following resolutions were passed by the Farmers Society of Equity at its annual meeting held in Indianapolis, Ind., December 17 and 18, 1912.

On Secretary of Agriculture

Whereas, a new Secretary of Agriculture will, in all probabilities, be selected in the near future, and

Whereas, the Department of Agriculture has been very successful in teaching farm-

New Invention **SELF-HEATING IRON**

The "Standard" Makes and Contains Its Own Heat

Works while it is heating, heats while it is working. Saves miles of walking.

SAVES ITS COST EVERY MONTH

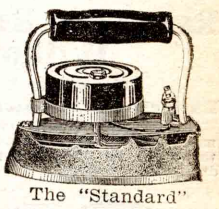
Economical, perfectly safe, convenient. The "Standard" is stove, fuel, heat—all in one. **Fire in Inside.** Carry it about, go where you please. Don't stay in hot kitchen; iron any place, any room. Go right along, one thing after another. All kinds of clothes.

IRONED BETTER IN HALF THE TIME

No waiting, no stopping to change irons. Right heat. Easily regulated. No time wasted. Iron on table all the time, one hand on the iron, the other to turn and fold the clothes. The "Standard" is neat, durable and compact; all parts within radius of iron and handle. No tanks nor fittings standing out at sides or ends to hinder or be in the way. No wires or hose attached to bother. **Right size, right shape, right weight.** Cheapest fuel, one to two cents does ordinary family ironing.

WHAT USERS SAY

Alex Stalker of N. Y. writes: "The Self Heating Iron received sometime ago and will say right here it **is the most wonderful time and money-saving device that was ever made.** My wife has just finished a large ironing in two hours that usually took her half a day with the old stove heating irons, and the house is cool. **It is certainly just the only iron made.** We want the agency." W. P. Farnum: "After receiving your iron and giving it a thorough trial it **will be a perfect success. My wife is enthusiastic** over the work it does and the economy in its use." Mrs. J. E. King, Ill.: "Received iron yesterday in good shape. **Well pleased with it. I want the agency."** I. N. Newby, Ill.; **"Find it to be all you claim for it."** Mrs. Josephine Route, N. Y., "Received the iron O. K. and did my ironing with it yesterday, **I like it very much."** A. E. Covert, N. Y.; "Have lighted it several times already and find **I can do ironing so much quicker and cleaner than in the old way.** Think it is the **best thing I have ever had in my house."** Miss Roxie Sheets, of N. C.; "The two irons received and am delighted. **Have turned off our regular ironer and will do the ironing ourselves now.** Sold the extra iron to the first lady I showed it to." Mrs. Watson C. McNall, N. Y.; "I am more than **pleased with it** and its work. It **is not a bit clumsy. It is a delight to use it."** Mrs. Cora Wright, Ill.; "I received the iron Saturday and **like it fine."** Mrs. C. M. Winstead, Ky.; "I received my iron about three weeks ago. **Like it better than anything I ever saw in the way of irons."**



The "Standard"

So they go—hundreds and thousands of delighted customers—the work of ironing cut in half—the expense of fuel almost eliminated—a Godsend to every home. The poor can afford it—the rich can buy nothing better. Every iron tested before shipping—fully guaranteed—ready for use when received. Price low—$4.50. Sent anywhere.

Agents Make Money. Men or women. Quick, easy, sure. **All your business.** Experience not necessary. Sells on merit—sells itself. They buy on sight. Every home a prospect. **Every woman needs it.** Price low—all can afford it. **HOW THEY DO SELL!** Even 2 or 3 a day gives $27 to $40 a week profit; 6 sales a day is fair for an agent; some will sell a dozen in one day. Show 10 families—sell 8. Not sold in stores. Send no money. Write postal today for description, agents selling plan. How to get **FREE SAMPLE.**

Relief For Rupture Without Operation

We Allow A 60-Day Test
Entirely At Our Own Risk—To Prove It

No longer any need to drag through life at the mercy of leg strap and spring trusses. No reason in the world for letting them force you to undergo a dangerous operation.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the cure and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

ers how to increase the production of the farms until the yields of our farm crops in recent years have increased enormously, and

Whereas, we see that when a large yield of any crop is secured, that almost without exception the value of it to the farmers is less than when there are moderate or short crops, and

Whereas, the cost of living has increased to such an extent as to be one of the great and menacing problems of the country, notwithstanding that in the present year and in other recent years, the prices of many farm crops have not returned reasonable profits to the producers of them and in many cases have actually netted the producers a loss, and in many other cases enormous quantities of farm, garden and orchard products have spoiled in the field, because it was claimed that there was no market for them, and

Whereas, these anomalous conditions must be because of an inadequate system of marketing farm crops. and

Whereas, the whole country is being aroused to the importance of more systematic marketing of farm crops to the end that farmers will be protected in their reward for labor and industry, that all markets be found and fully supplied to the end that every man, woman and child in the country can get plenty of the fruits of the field to consume at reasonable prices; therefore, be it

Resolved, by the Farmers Society of Equity in National Convention assembled that our Government as represented by the Department of Agriculture should take a broader view of agriculture and recognize the marketing side as well as the producing side, and lend its efforts to teaching the farmers how to market as well as how to produce larger and better crops. In other words, that it will give equal attention to marketing as it does to production. And,

Whereas, our President, J. A. Everitt, has been the acknowledged leader in teaching the farmers of America the important lessons of marketing crops, and at the same time has a practical knowledge of the assentials in the production of crops, we regard him as eminently fitted to fill the position of Secretary of Agriculture; therefore, be it further.

Resolved, that we present his name as a candidate for the Secretaryship and we do strongly recommend him to President-elect Wilson and to the farmers of the country as the man best qualified to fill that important position.

On Farm Mortgages

Whereas, there is a movement in this country for cheaper money for farmers for the further development of agriculture, the plan being to mortgage the farms and issue bonds thereon that would be sold in the markets of the world, and

Whereas, it is represented that a similar credit or bond scheme is very popular in some European countries, and that it has proven very beneficial to farmers of those countries, and

Whereas, the farmers in those European countries where this system is in operation, are organized and they control the system, and own the banks from which the loans are made, thus controlling both the bonds and the mortgages, while in this country our farmers are not organized in such a way that they can control the mortgages or the bonds, and

Whereas, our farmers not being organized and not being able to make the prices on their own crops, it is clear that their necessities for mortgaging their farms and borrowing money will be governed entirely by the prices they receive for their products, and

Whereas, if this scheme is put in operation in this country under the present conditions, the bonds would largely be owned by the same people who are now in control of the marketing system for farm crops and who would have it in their power to intensify the needs for borrowing money, by paying low prices for the products of the farm; therefore, be it

Resolved by the Farmers Society of Equity, that we are opposed to the mortgage-bond scheme as long as our farmers are not organized, or as long as they are not in a position to make the prices on their own crops and get them, or as long as they are not in a position to control the mortgage and bond system and keep the bonds out of the hands of speculators.

In thus declaring against the plan, we do not mean that farmers should not have every advantage in borrowing that other classes of people have, or that they should not have as low rates of interest as can be secured by other people, but we claim that farmers must sell right first, then their needs in borrowing can be determined; and further be it

Resolved, that any credit scheme for farmers in the United States should be operated as an adjunct of their own business organization, and not be controlled by the money interests or any other interests.

On Parcels Post

Whereas, Congress has given the country a Parcels Post system to be in operation January 1st, 1913, and

Whereas, the demand for a Parcels Post was stronger from farmers and the consumers of their products than from any other classes of the people, because these people thought they say in it a solution of the marketing problem to give a greater profit to the former and lower prices to the latter, and

Whereas, an analysis of the system seems to show that, except in unimportant particulars, the system is wholly impractical for marketing farm products, because of the rate of postage charged and the unreasonable limitation in the weight of the packages that will be carried, and also because it is more expensive than postage rates already in force, and special express rates already given by the express companies; therefore, be it

Resolved, that the Farmers Society of Equity in its National Convention does condemn Congress for refusing us a serviceable and valuable Parcels Post measure, that we do characterize the Parcels Post law, enacted by the last Congress, as a humbug and a deceit on the people; and be it further

Resolved, that we demand of the present Congress a really beneficial Parcels Post or Parcels Express, and such latitude in the weight, and such a low rate of postage as will make it of real service to the people and afford relief from exorbitant express rates.

Hears Church Bells After Long Deafness

For the first time in years, this good lady, who has been deaf, hears the church bells. She is in ecstasy. Only this morning has she been able to hear the prattle of her grandchildren and the voice of her daughter. Twenty-three years ago she first found herself becoming deaf, and despite numerous remedies, medical advice, hearing devices and specialists' treatment she found it more and more difficult to hear. Of late years she was harrased by peculiar noises in the head, which added to her misery. At last she was told of a book which explains how to regain perfect hearing without costly apparatus or drugs. She got this book and learned how to quickly become freed from deafness and head noises. Observe her delight in this hypothetical illustration! Any reader of UP-TO-DATE FARMING who desires to obtain one of these books can do so free of cost by merely writing to the author, Dr. George E. Coutant, 33 D, Station F. New York, N. Y. He will be pleased to mail it promptly, postpaid, to any one whose hearing is not good. This offer will bring joy to many homes.

Grand FREE OFFER TO YOU On This "American Beauty" 1913 Calendar!

Here is the most beautiful creation in the calendar line we have ever been able to offer. We believe it will take *first honors* when matched against *any other* calendar design produced for the year 1913. This design is indeed *a masterpiece*—it is the work of one of the most capable portrait artists in America, and the original painting has been reproduced with remarkable accuracy by the most modern lithographing process. The coloring is *exquisiite* and *true to life*, from the delicate shading of the rose bud to the bewitching blue in the eyes of the beautiful American girl who posed for this picture.

Lithographed in 14 Colors—8¼ in. Wide by 3 ft. Long

The complete calendar measures 8¼ *inches wid* by 3 *feet long*, and the paneled effect through which the figure of this beautiful American girl is shown adds most materially to the strength and general harmony of the complete work. The calendar for every month of the year 1913 is printed on the back of the picture and there is no advertising to mar the beauty of the picture in any way. The calendar is lithographed in many colors on 70 pound white coated *specially made paper*. It is tinned and fitted with a hanger at the top and has a daintily covered pasteboard tube at the bottom which prevents the calendar from curling up, and makes it unnecessary to mar the picture in any way by using pins or tacks. The finished picture is put through what is known as the "roughing process," which gives a wonderfully accurate reproduction of real *canvas*.

A MASTER WORK OF ART!

It is impossible to do full justice to the *unusual beauty* of this *wonderful* picture with any words at our command. The greatly reduced one-color reproduction printed here serves only to give you a general idea of the subject and can in no way give you a *true conception of this master work of art*. You must *see* the calendar in order to fully appreciate it. I want to send you one of these calendars entirely at my risk. If you are not positively delighted with it after you receive it, mail it back immediately and I will refund your subscription money and the postage on your letter.

Most Remarkable FREE GIFT OFFER!

We contracted six months ago for 50,000 copies of this beautiful calendar. Those who have seen the calendar tell us that we *should* have ordered 100,000 instead of 50,000. It is too late now to increase our supply this year. When these 50,000 are gone we can supply *no more* at any price. So as long as our supply lasts the distribution must be a case of "*first come, first served.*"

We will send one of these magnificent calendars, carefully wrapped, *absolutely free and postpaid*, to all who send 25 cents to pay for a new, renewal, or extension one-year subscription to our big home and story magazine, *The Household*. The orders are coming in by the hundreds and you have no time to lose if you want to be sure of your calendar. Use the accompanying coupon and send in your subscription at once. Address,

HOUSEHOLD MAGAZINE,
Dept. Cal-12, TOPEKA, KANSAS

USE THIS COUPON

Accepted the Compliment

Mistress, to new cook.—It does seem like the worst women get the best cooks.

Cook—Aw, go'an wit yer blarney!

Country Neatness

Four year old Ellie had just reached her aunt's, on her first visit to the country, and was looking around the yard where she saw the hens scratching. Running to her aunt she exclaimed: "Oh, auntie, the hens are all wiping their feet on the grass!"

She Must Have Had It

Doctor, to office boy.—Thomas, did Mrs. Carter get the medicine I prepared for her yesterday?

Thomas.—I think she did, sir; I see crape on the door this morning.

WE PAY 36 A WEEK AND EXPENSES to men with rigs, to introduce poultry compound. Year's contract. IMPERIAL MFG. CO. Dept. 57, PARSONS, KANS

TRUSS WEARERS

FREE attention: The PLAPAO-PADS are different from the truss, being medicine applicators made self-adhesive purposely to hold the parts securely in place. No straps, buckles or springs—cannot slip, so cannot chafe or compress against the pubic bone. Thousands have successfully treated themselves at home without hindrance from work and conquered the most obstinate cases. Soft as velvet—easy to apply—inexpensive. Awarded Gold Medal. Process of recovery is natural, so no further use for truss. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TO-DAY.

ROOFING LUMBER PRICES WIRE and FENCING BUILDING MATERIAL

Our Great 1913 Announcement

You can order a complete carload of material including everything you need to construct a building and we will ship it forward to you without you paying us a cent down.

No Money Down

Write Us for Our Liberal Terms

You are safe when you deal with us. Our capital stock is $2,000,000.00 and 20 years of honest dealing have earned a place for us in the public confidence that is unquestioned.

Lumber Prices S-m-a-s-h-e-d

Yes, we mean smashed. Absolutely busted to pieces. That's our policy. We quote prices on lumber that will positively save you big money. If you will send your lumber bill we will send you a freight paid estimate that will mean a saving to you of from 30% to 50%. Every stick is absolutely first class, brand new and fully up-to-grade such as you would buy from any reputable house in the United States.

We have determined that the Fall of 1912 is going to be the **Banner Year** in our great lumber department. We have on hand 20,000,000 feet of high-grade lumber suitable for the construction of Buildings, no matter for what purpose intended. Come to our great yards in Chicago and let us show you this stuff actually in stock. No other concern in the world has a more complete stock of everything needed to build, whether Lumber, Shingles, Structural Iron, Plumbing, Heating, Doors or anything else that you may need. Do you know that lumber is getting scarcer and scarcer every year? Yet our prices are lowest and will continue so until our stock is gone. WRITE TODAY.

Shingles at Big Saving

We have a special lot of 1,000,000 5 to 2 Common Clear Shingles Coming in, on which we are making an exceptionally low price of $2.47. Other grades at lower prices.

This Door at 98c

Free Building Book

A 200-page Book of Bargains in Millwork, Building Material of all kinds, including Paints, Plumbing, Heating, Structural Iron, Metal and Composition Roofing, Hardware, Carpenter's and Blacksmith's Tools, Wire Fencing. No prospective builder should be without it. **It Is Free.**

You can buy a carload of Building Material from us without paying us one cent in advance. All we want to know is that the money will be paid us as soon as the material is received, unloaded and checked up. Our terms are more liberal than anyone else offers.

EXPLANATION

Why We Are Called the "Price Wreckers"

CONSIDER what becomes of the stock of goods when a manufacturer, jobber or big retail merchant goes bankrupt, or "busted" as the saying goes. In the year 1911 ten thousand merchants met with financial distress—that's why the Chicago House Wrecking Co. exists. If the stocks offered are sufficiently large, if the goods are new, clean and desirable, they find their way naturally to our 40 acre plant for distribution, at a small added profit to our hundreds of thousands of customers, who, in this way get wonderful bargains.

In many cases our prices do not represent the original cost of production. There is not another concern on earth that can meet our prices, simply because no other concern has the buying and economical distributing facilities which we enjoy. It is only natural therefore, that we have become known as "Price Wreckers".

Where Your Dollar Does Double Duty

Every time you buy from us, your dollar takes on an increased purchasing power. We are the safety valve between the public and high prices. We recognize no Trusts or Associations—our methods are along original and unique lines. We are not plodders—we are merchants in the fullest meaning of the word, and the wise public have not been slow in realizing our position in the world.

Our great plant at 35th and Iron Sts. is a Mecca for the people of Chicago and surrounding country. Thousands of visitors from every part of the country make a yearly pilgrimage to our institution, and buy their yearly supplies. Are you getting all the benefit that you should from this excellent opportunity? We urge you to learn more about the wonders of our plant, and the opportunities that we afford when you deal with us. You get full value for your money. There is nothing fanciful about our methods—we are just straight, clean business men.

WE SELL PRACTICALLY EVERYTHING

Our stock includes practically "everything under the sun". It's in truth, from a needle to a locomotive. No matter what your vocation, or what position in life you occupy, or what your business, or how great a merchant you are, you have use for us, and we have the goods that you can buy from us to a decided advantage. The quicker you learn to recognize this fact, the sooner you will be "putting money in your pocket".

Our stock includes Building Material, Lumber, Roofing, Sash, Doors, Millwork, Wire and Fencing, Hardware, Plumbing Material, Heating Apparatus and Supplies, Furniture, Household Goods, Rugs, Stoves and everything needed to furnish or equip your home, your club or hotel. It includes Groceries, Clothing, Dry Goods, Boots and Shoes, Furnishing Goods, and every single article to clothe a man, woman or child. It includes Sporting Goods, Fishing Tackle, Hunting Outfits, Tents, Guns, Harness and Vehicles, Jewelry, Sewing Machines, Clocks; also structural iron needed in the construction of buildings, bridges, etc. Machinery, gasoline, gas and electric power outfits. In fact you cannot think of a single manufactured article that we cannot supply you at a saving in price. Let us convince you—it means but little effort on your part to prove the truth of all we say. Write us to-day for our Catalogue and literature. Fill in the coupon shown below.

$725 Buys the Material to Build This House

CHICAGO HOUSE WRECKING COMPANY DEPT. AG 135 CHICAGO

UP-TO-DATE FARMING

JANUARY 15th 1913

What Will the Harvest of 1913 Be?

The nine crops that we usually measure by bushels—corn, wheat, oats, rye, barley, buckwheat, flaxseed, rice and potatoes—with their values on December first each year are indicated above (government figures).

We see that the 1912 crop totaled 1,404,790,000 bushels more than the 1911 crops but were valued at $44,091,000 less; they were 705,612,000 bushels more than the 1910 crops and were valued at only $177,849,000 more; they were 1,082,407,000 bushels greater than the 1909 crops and were valued at $240,671,000 less.

Here are some of the lessons we learn from this illustration: In 1912 farmers were very successful in producing but they gave 1,404,790,000 bushels away, for nothing, and were penalized $44,091,000 of cash money, compared with 1911, for their success. Compared with 1910, they raised 705,612,000 bushels and sold them for $177,849,000, or an average all around of 25 cents a bushel. Compared with 1909 they raised 1,082,407,000 bushels more, gave it all away, for nothing and paid $204,671,000 as a penalty for raising it, or as a penalty for maintaining a vicious marketing system.

Let farmers take these lessons and others that the illustration suggests, home as they are planning for their 1913 crops. And let us say that nothing definite need ever be hoped for until the marketing system is changed. We tell how each reader can help change it on page 17.

My Farm Animals Thrive

Because I Keep Them Supplied With

The Medicated Stock Salt and Conditioner

SALTONE

TRADE MARK

The Stock Wormicide and Tonic

A Personal Statement by John E. Robbins, President of this Company:

SalTone Has Made Money for Me on My Own Stock Farm

I use it for all my stock. It has made money for every stock grower and farmer who has ever used it. I have been raising stock for the market for more than thirty years. For several seasons past I have been keeping my hogs, sheep, cattle and horses in splendid condition by using Sal Tone. When I recommend it to you and guarantee that it will do for you what it is doing for me I am taking no chances, because I know just what I am talking about. Your animals are built like mine. They are subject to attacks from worms and parasites, cholera, pneumonia and other diseases just as mine are.

Before my veterinary (Dr. C. B. Ainsworth) and I got together and perfected the SalTone formula, I used every stock food and tonic I could find. I lost thousands of dollars' worth of live stock while I was experimenting with them.

When one of my animals died, I had its carcass cut open and examined, and no matter what disease it died of, the examination showed that it was infested with stomach and intestinal worms—that its death was directly or indirectly due to them.

I made up my mind that if I wanted to make any real money in the stock raising business, I must find a remedy that would drive out these disgusting parasites and keep them out. So I began experimenting with a remedy of my own, and finally got it to suit me perfectly. SalTone is that remedy. SalTone does what other so-called remedies only promised to do. But it does a lot more. It saves direct losses and death from disease, for one thing, and it makes money by toning up the animals so that they put on weight at an astonishing rate on less feed than they ate when they had no SalTone. In other words, SalTone saves money and makes money, too.

For example, KEEPSAKE 2nd, one of my grand champion hogs at the 1912 International Live Stock Exposition, put on 60 lbs. in 12 days just before the Exposition. Five pounds a day; all this with the ordinary amount of feed with a small amount of SalTone.

I not only use SalTone for my prize-winning animals, but for the ordinary hogs, sheep and cattle raised for the market.

SalTone costs almost nothing. One cent's worth will last a sheep or hog 12 days, a steer or horse 4 days. It saves 10 times its cost in feed alone to say nothing of the saving in losses from death caused by diseases. You can TRY it 90 days before you buy. You fatten your stock before you pay. It must satisfy you or no pay.

Order a Trial Supply TODAY on 90 Days Approval

We'll ship Sal Tone to you on our broad guarantee that it costs you nothing if it fails to do all we claim. You merely pay the small freight charge, and use according to directions for 90 days. At the end of that time, after you have had a chance to fatten and market your stock, report results. If Sal Tone does not do all we claim (remove the stomach and intestinal worms) just say so, and it costs you nothing. We leave it to you absolutely.

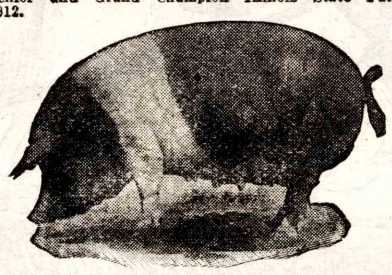
KEEPSAKE 2d, No. 14,662, Junior yearling sow, Sal Tone Stock Farm, Greensburg, Ind. First in class, Senior and Grand Champion International Live Stock Exposition, Chicago, 1912. First in class Senior and Grand Champion Illinois State Fair, 1912.



GOLDIE, No. 8896, Sal Tone Stock Farm, aged sow, first in class at International Live Stock Exposition, Chicago, 1912. First in class Senior and Grand Champion Iowa State Fair, 1912. Also first in class Interstate Fair, Sioux City, Ia.; Nebraska State Fair, South Dakota State Fair, Illinois State Fair, 1912, Champion sow Nebraska and South Dakota Fairs 1912.

Read What These Men Say About Sal Tone

I think your SALTONE is the best preparation for hogs that I ever used. I lost 97 hogs in 1911 and have never had a sick hog since I have been using SALTONE.—H. L. COCHRAN, Oxford, O., R. R. 5.

My pigs are fine as silk. I lost two and two could hardly walk before I received SALTONE. They have increased $50 in value on $12 worth of middlings in 70 days. Judge for yourself what I think of SALTONE.—C. A. HUNT, Thompsonville, Mich.

Received the SALTONE and fed most of it. Will want more soon. It gave satisfaction and can heartily recommend it. We fed it to our Hampshire hogs and our horses and think it is a great worm destroyer. We expect our horses from Europe next month and will order more then.—J. CROUCH & SON, Lafayette, Ind.

In January and February I lost 66 head of my hogs with what we call pronounced cholera. I tried all the old known remedies as well as all new ones that I could hear of, but they all failed. When your medicine came three more were about gone, and two others sick. I lost no time in going after them with your medicine. I have had no sick ones since. I have no hesitancy in saying that your SALTONE is all you claim for it, and the best hog medicine in existence. I shall use nothing else for my hogs in the future, and expect to keep it on hand all the time. If I had of had 100 pounds of your SALTONE the first of last January, I believe it would have saved me $1,000.00 worth of hogs.—W. H. REMY, Concordia, Kans.

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00. No mail orders filled for less than 40 lbs. SalTone is always sold in "trade-marked" packages—never in bulk.

A Shipment of SalTone Fed Sheep from SalTone Stock Farm Owned by John E. Robbins. These Animals Brought Top Prices.

The John E. Robbins Company, Greensburg, Indiana

Ship me your SPECIAL 100-LB. 90-DAY TRIAL ORDER OF SALTONE. I will tell you in 90 days whether it does as you say, and if it does, will pay for it. If it does not I owe you nothing.

THE LEVER BILL

Agricultural Extension Thereby a Failure

IN JANUARY 1st issue of UP-TO-DATE FARMING we announced that the Senate committee to which the measure had been referred, had rendered a favorable report on the Lever Agricultural Extension Bill, and urged its prompt adoption by the Senate, it having already been adopted by the House. We also announced that in this issue we would print the bill and express our opinion of it. The bill as adopted by the House and favorably reported to the Senate follows:

A BILL

To establish agricultural extension departments in connection with agricultural colleges in the several states receiving the benefits of an Act of Congress approved July second, eighteen hundred and sixty-two, and of Acts supplementary thereto.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assempled, That in order to aid in diffusing among the people of the United States useful and practical information on subjects relating to agriculture and home economics, and to encourage the application of the same, there may be established, under the direction of the college or colleges in each state now receiving, or which may hereafter receive, the benefits of the Act of Congress approved July second, eighteen hundred and sixty-two, entitled "An Act donating public lands to the several states and territories which may provide colleges for the benefit of agriculture and the mechanic arts," and of Acts supplementing thereto, a department to be known and designated as an agricultural extension department: *Provided,* That in any state in which two *or more* such colleges have been or hereafter may be established the appropriations hereinafter made to such state shall be administered by such college or colleges as the legislature of such state may direct.

Sec. 2. That it shall be the object and duty of said agricultural extension departments to give instruction and practical demonstrations in agriculture and home economics to persons not resident in said colleges in the several communities, as may be provided by the states accepting the provisions of this act, and to convey and impart to such persons information on said subjects through field demonstrations, publications, and otherwise.

Sec. 3. That all printed matter and correspondence for the furtherance of the purposes of this Act issued from the agricultural colleges or by the agents of the said extension departments thereof receiving the benefits of this act shall be transmitted in the mails of the United States and dependencies free of charge for postage, under such regulations as the Postmaster General from time to time may prescribe.

Sec. 4. That for the purpose of paying the necessary expenses of maintaining said agricultural extension departments and printing and distributing information on agriculture and home economics, as hereinbefore prescribed, and for otherwise carrying out the provisions of this Act, the sum of ten thousand dollars shall be, and hereby is, annually appropriated, out of any money in the treasury not otherwise appropriated, to be paid, as hereinafter provided, to each state which shall by action of its legislature assent to the provisions of this Act: *Provided,* That payment of such installments of the appropriation hereinbefore made as shall become due to any State before the adjournment of the regular session of the legislature meeting next after the passage of this Act shall be made upon the assent of the governor thereof, duly certified to the Secretary of the Treasury: *Provided further,* That the additional sum of three hundred thousand dollars shall be appropriated for the fiscal year ending June thirtieth, nineteen hundred and fourteen, to be paid as hereinafter provided, and an annual increase of the amount of such appropriation thereafter for nine years by an additional sum of three hundred thousand dollars over the preceding year, and the annual additional sum to be paid thereafter to the states shall be three million dollars, to be used only for the purposes hereinbefore stated; these additional sums to be allotted annually to each state in the proportion which its rural population bears to the rural population of all the states, as determined by the next preceding federal census: *Provided further,* That no state shall be entitled to any part of its allotment of these additional sums unless its legislature has heretofore provided or until it shall provide for the establishment of an agricultural extension department in its college or colleges receiving the benefits of this Act, and the additional amount to be paid in any year to any state under this Act shall be a sum not exceeding the sum appropriated for that year by the legislature of such state or provided by state, county, college, or local authority for the maintenance of said agricultural extension department: *And provided further,* That in each State which shall assent to the provisions of this Act there shall be expended each year for field instruction and demonstrations not less than seventy-five per centum of all moneys available under the provisions of this Act.

Sec. 5. That whenever it shall appear to the Secretary of the Treasury, from the annual statement of receipts and expenditures of any of said agricultural extension departments that a portion of the preceding annual appropriation remains unexpended, such amount shall be deducted from the next succeeding annual appropriation for such agricultural extension department, in order that the amount of money appropriated for any agricultural extenson department shall not exceed the amount actually and necessarily required for its maintenance and support.

Sec. 6. That the sums hereby appropriated for extension work shall be annually paid in equal *semmi-annual* payments on the first of January, *and* July of each year by the Secretary of Agriculture, out of the Treasury of the United States, to the treasurer or other officer duly appointed by the governing boards of said colleges to receive the same; and such officer shall be required to report to the Secretary of Agriculture, on or before the first day of September of each year, a detailed statement of the amount so received during the previous fiscal year, and of its disbursement, on forms prescribed by the Secretary of Agriculture.

Sec. 7. That if any portion of the moneys received by the designated officer of any state for the support and maintenance of agricultural extension departments, as provided in this Act, shall by any action or contingency be diminished or lost, or be misapplied, it shall be replaced by said state to which it belongs, and until so replaced no subsequent appropriation shall be apportioned or paid to said State, and no portion of said moneys shall be applied, directly or indirectly, to the purchase, erection, preservation, or repair of any building or buildings, or to the purchase or rental of land, and not more than five per centum of each annual appropriation shall be applied to the printing and distribution of publications. It shall be the duty of each of said colleges annually, on or before the first day of January, to make to the governor of the State in which it is located a full and detailed report of its operations in the direction of extension work as defined in this Act, including a detailed statement of receipts and expenditures from all sources for this purpose, a copy of which report shall be sent to the Secretary of Agriculture and to the Secretary of the Treasury of the United States.

Sec. 8. That on or before the first day of July in each year after the passage of this Act the Secretary of Agriculture shall ascertain and certify to the Secretary of the Treasurer as to each state whether it is entitled to receive its share of the annual appropriation for agricultural extension departments under this Act, and the amount which thereupon each is entitled, respectively, to receive. If the Secretary of Agriculture shall withhold a certificate from any State of its appropriation, the facts and reasons therefor shall be reported to the president, and the amount involved shall be kept separate in the Treasury until the close of the Congress *next succeeding a session of the legislature of any state from which a certificate has been withheld,* in order that the state may, if it should so desire, appeal to Congress from the determination of the Secretary of Agriculture. If the next Congress shall not direct such sum to be paid, it shall be covered into the Treasury. And the Secretary of Agriculture is hereby charged with the proper administration of this law.

Sec. 9. That the Secretary of Agriculture shall make an annual report to Congress of the receipts and expenditures and work of the agricultural extension departments in all of the States receiving the benefits of this Act, and also whether the appropriation of any state has been withheld; and if so, the reason therefor.

Sec. 10. That Congress may at any time annul, suspend, or repeal any or all of the provisions of this Act.

Comment on the Bill

This measure is so worded that it will appeal strongly to farmers who have not specially studied the matter, especially to progressive farmers who are eager for everything to be done that can be to put farming on a higher plane, and bring about the time when agriculture shall assume its proper place in the industrial world—the most prominent place of all. This class of farmers are entitled to the most profound respect, and we study their opinions with keenest interest. The measure also appeals strongly to the great forces that are now taking so deep an interest in agricultural extension, and doing so much, as they sincerely believe, for the benefit of farming. The bill is popular, therefore, with all these great influences, and even before this paper reaches our readers, it may have passed the Senate, been signed by the President, and become a law.

But we are compelled to regard it ineffective if not actually mischievous; deceptive as to its workings, like other measures whose fallacies we recently exposed, and is calculated to put another tremendous burden upon the farmers of the country without adequate rewards therefor. In fact, it can not bring the good results claimed for it, nor can it even approach thereto.

The claim that it is a "follow up" measure of the act of July 2, 1862, is not well founded. That act was simply a donation to the states of unoccupied public lands to aid in the founding of colleges therein to teach agriculture and the sciences that pertain thereto. It did not provide for flooding the country with "experts" of doubtful qualification at an immense increase of the burden of taxation, with little hope of equivalent returns.

In the first place, the Lever bill's agricultural extension consists entirely of crop production. Like so many of the extension schemes, it does not so much as consider supply and demand, and makes no reference to marketing and price. More must be produced whether it is needed or not. Experts must be employed all over the country at high salaries to teach American farmers to meet the acreage yields of European farming, utterly regardless of the fact that the supply there must come from very few acres to meet a great and insistent demand, whereas in this country we have many acres to supply a various and limited demand. The fact that our farmers now supply our demand at entirely reasonable prices, with a greater or less abundance to go to foreign lands every year, besides much valuable stuff that annually goes to waste on the farms for lack of ability to harvest, for lack of transportation, or for lack of demand that affords remuneration either for production or harvesting—all these facts are entirely ignored in the bill. Also that other fact that is every year pressed home to the farmers, that every addition to a crop surplus reduces the price value of the entire crop. These are neither surmises, guesses nor theories. Every report from the Department of Agriculture confirms them in various ways; and it is so strange that agricultural extension

(Concluded on Page Five.)

Excessive Production and Loss

THOSE who write most for farmers and plan most for agricultural improvement, live in the cities, and know the farmers and the conditions they are up against only as they look across the country from their city homes or from rapidly passing railroad trains. The knowledge thus obtained, if it can be called knowledge, is supplemented by what may be obtained from the writings of others who view the situation much as they themselves do, and from interviewing those who handle farm products but at the wrong end of the marketing line. These people naturally see only the producing side of farming, and just as naturally that is the only side they write upon or seek benefits for. Mistakenly, they regard the selling of the stuff a trading proposition that belongs to the so-called business world, and they leave that to the trading people, the buyers and sellers, the commercial side of human industry. If anything is done for the farmers they believe it must be done in the line of production. If farmers lack anything they can see no way to obtain it for them except in increased yields. Unfortunately, this is so with the agricultural colleges and universities, with farmers institutes and experiment stations, with state and national departments of agriculture, and with lecturers as well as writers. It is so with the Lever Bill, which we publish and discuss more fully in another part of this paper. The whole purpose of that measure is the increased production of farm crops. Supply and demand is nowhere considered; marketing does not once enter into the proposition, and price, one would think according to the bill, has nothing to do with agricultural success.

We have time and again shown, and proven beyond question, that excessive production is ruinous to the producers, that when the demand is oversupplied the excess not only goes to waste, but it depresses the price of the whole crop and brings a loss even on that which is marketed. We have proven also that such excess does not benefit consumers. Marketing is so controlled that no matter how much may be in the fields, only enough is allowed to enter the retail trade, the actual supply houses, as will command high prices from the consumers. And worse yet, distribution is such that many are not reached at all by the supply, and thousands, often comparatively near by, go hungry for the very stuff that is rotting in the fields or going to waste elsewhere. If the benevolently inclined would study this side of the agricultural situation, their efforts would be turned in this direction also, and with immediate and positive good results.

Once more we give a few unexaggerated instances whose truth we unhesitatingly vouch for. We need scarcely refer to the case of the Southern Illinois orchardist and farmer in whose orchard last fall hundreds of bushels of fair apples went to waste for lack of a price that would pay for marketing them, and who sold more than six hundred bushels at ten cents a bushel as the best price he could get in the orchard, and the most profitable price when the cost of marketing was deducted from the then best market price. Need that man or his neighbors be taught how to raise more apples?

Another strong case is the last year's cabbage production in territory tributary to Pittsburg, Pa., This also shows, as we have often declared and proven, that, under the present system of marketing, the consumers get no benefit from increased production. We quote from a Pittsburg dispatch of December 21:

A week ago 125 carloads of cabbage reached the Pittsburg produce market. The wholesale price rapidly tumbled and finally carloads were offered for the freight charges, $8. Cabbage was sold wholesale for $1 a wagon load and the buyer allowed to pile the wagon as high as he could. Even then only six carloads were sold and the rest rotted.

According to information reaching the Chamber of Commerce, while this was going on, the retail price of cabbage was the highest it has ever been here. A two and one-half pound head of cabbage was sold by grocers for 8 cents. It is estimated the grocer's profit was 450 per cent. if he paid the market quotation of 50 cents a hundred pounds, but if he bought a two-ton wagon load for $1 he made, 6,400 per cent.

What relief would the Lever Bill, in its present form, be to that situation?

And the onion growers of California who threw many of their onions into the San Joaquin river because they found it impossible to sell them, and contributed the remainder, including many potatoes, as a free-will offering to the poor in some of the eastern cities. Do these people need to be taught how to raise more onions?

A letter from Idaho, the writer of which we unhestitatingly vouch for, says "many worthy men who have good crops of grain, hay and potatoes, must move on because, under this miserable marketing system, they cannot convert their crops into money, and yet right here in this little city of 5,000 people (Idaho Falls) many are hungering for these same food products." Would it not be better to give these people a system of better marketing and distribution than to teach them how to raise more stuff?

"One farmer I visited," says the letter above referred to, "has in his cellar 2,500 sacks of as fine potatoes as ever grew in any soil, that he can not afford, at the price, to haul to the nearest shipping station, and his neighbors are in much the same condition." Another farmer in the same neighborhood had bought a farm and built a nice home upon it. "I am debating," said he, "whether to stay on it or move off and leave it; I have good crops but can not sell them." Do these people need to be taught how to produce more? "It makes my blood boil," continues the writer," and I feel like cursing those who are preaching more production while living, acting and voting more burdens on both producer and consumer."

The Battle for Food

TWO column articles are being sent out from Washington to the press of the country, detailing what is called an impending "battle for food." We quote from one of them:

Will the United States eventually find itself face to face with starvation, and if so, when? These two questions, fantastic and impossible as they may seem to the average citizen, are nevertheless of such real import that they are rapidly involving the country in the greatest struggle in its history—the battle for food.

No one can be so ignorant as not to realize the folly of such talk. Everything in this country is today full of foodstuffs; in many places it is actually going to waste because no place that needs it can be reached. We agree that if the demand could be found and supplied, all would likely be taken, and we insist that organization, state authority or national power be directed to the establishment of a system that will find the demand and supply it at reasonable prices, cutting out the nefarious system that now destroys on the farms and inhumanly robs the users. Do that, and there need be no fear as to lack of production. Our soil CAN produce twice as much as it does, and our farmers will make it do it once they are assured that the product will meet a demand at fairly profitable prices. We now supply all our own people and thousands in foreign lands, but it is worse than folly to go to them with such talk as comes from Washington unless it is accompanied with the assurance of a market and remunerative prices.

Under present circumstances, we are compelled to believe that such articles originate with schemes designed to deceive the people and boost measures for the increased benefit of the few against the many—the mortgage bond scheme, the Lever bill scheme, and other like propositions that go before the people in disguise, the effect of which will be to increase the power of the ruling few, give the money oligarchy a chance to control the lands, sap out the life-blood of independent homes, and ultimately result in a landed as well as a moneyed artistocracy. How we do wish the people would read and think.

The Cotton Crop

IN SPITE of the blowing in upper official and news circles, the real influences that aid the speculators in reducing prices, all the crops of 1912 were not the "biggest ever known." The cotton crop is below that of 1911. We give the following table from figures furnished by the Department of Agriculture. The numbers given are bales of 500 pounds each.

STATES	1912	1911
Virginia	24,000	29,891
North Carolina	878,000	1,075,826
South Carolina	1,184,000	1,648,712
Georgia	1,701,000	2,768,627
Florida	68,000	83,388
Alabama	1,330,000	1,716,534
Mississippi	1,109,000	1,203,545
Louisiana	435,000	384,597
Texas	4,850,000	4,256,427
Arkansas	854,000	939,302
Tennessee	280,000	449,737
Missouri	59,000	96,808..
Oklahoma	1,039,000	1,022,092
California	9,000	9,790
All Other		7,425
United States	13,820,000	15,692,701

These figures show that in only a few states does the cotton crop of 1912 exceed or even equal that of 1911, the excess being only by very small margins, and the total deficit being 1,872,-701 bales. This is a reduction of nearly 12 per cent., and according to our teaching that excessive crops bring low prices, the smaller crop of 1912 should bring the cotton growers better prices than did the larger crop of 1911. The facts again vindicate our teaching. As early as the middle of December the price of cotton in New York was $13.20 per hundred pounds, against $9.35 per hundred pounds at the same time last year for the crop of 1911. At this rate the smaller crop of 1912 will bring the growers more money than did the larger crop of 1911, provided the growers secure their share of the increase. Oh, that the farmers were organized so as to get what is coming to them!

Mr. Dooley's Cabbage

"Good mahrnin' Hinessey."

Good mahrnin', Mister Dooley."

"An' it's foine winter wither we've been a-havin' th' last wake er two, don't ye think so?"

"I nivir have seen sich ixtinsive wither in all me fifty-sivin diffrunt shtaits iv livin'.

"Yis avin with all th' mild wither they till me th' proice iv cabbage is something scandalous down in New Yawrk City. Ye see, Hinnessey, they don't give th' poor cabbage a chancet f'r his white alley. Let's take a cabbage jist t' illystrait me p'int. Supposin' this cabbage is raised in th' shtait iv Connectikoot by a fahrmer who worrks with his hands but nivir gits callouses on his brains a-thinkin' iv th' best way to git that cabbage to th' olltimate consumer. He sinds this head iv cabbage to th' commishun merchunt in New Yawrk an' gits th' princely soom iv wan an' wan-half sints f'r it. Th' commishun merchunt lives on Riverside Droive, where they charge a mon ixtry if he brathes frish air. It costs that commishun merchant sivin thousand dollars a year to iggsist.

"That head iv cabbage is sint on to th' wholesaler. He lives on Wist Indiana avenyoo an' lives loike an oryental potentate travelin' on th' high in his automybeel. Th' wholesaler sinds th' cabbage to th' jobber who lives in an apartmint where packages is all daylivered at th' rear door. If th' shtork would dayliver a baby at wan iv thim places, he'd have to take it around to th' back door. This wholesaler sinds th' cabbage to th' grocery mon, who lives in a sivin hoondred apartmint on a side strait, pays wan hoondred dollars a month rint f'r his shtire, kapes two delivery wagons an' spinds money as if it wus goom drops.

"Whin that same ol' head iv cabbage raiches th' ooltimate consoomer, who lives in an apartmint f'r which he pays fahrty dollars a month, an' roides to his worrk on a trolley cahr, th' consoomer's woife looks at th' bill an' sees this itim, 'Wan head iv cabbage, 13 sints'."

"Whose fault is it, th' fault iv th' cabbage?"

"Hinnessey, th' cabbage wus all right. It's all th' fault iv th' systim. It's jist sich things as this that makes me want to go out an' praitch co-operashun to thim fahrmers iv Connectikoot. That's me wan New Year's risolushun, an' I'm goin' to carry it out or me maiden name's not Mister Dooley."

Editorial Paragraphs

Exercise Judgment—A trouble with farmers is that when produce or stock is low they lose interest in it and let it go at a loss; then when the demand is good, prices high and the market excited, they refuse to sell, expecting prices to go still higher. When profitable prices are offered is the time to sell.

Good Money—A farmer in Pennsylvania reports that from sixteen grade ewes he obtained thirty-six lambs and raised thirty-three of them that brought him $130.25. The wool from the ewes brought $28.60, making a total of $158.85. From this, of course, must be deducted the cost of the keep, but the fertilizing value of the flock may be added, and the capital in the ewes remains unimpaired, except that a year is added to their ages. It is good money.

Meat Supply—The Department of Agriculture reports that five million more hogs were slaughtered in 1912 than in 1911. What is the matter with the scarcity and high price of pork and bacon? Mr. Morgan before a congressional committee declared he controlled nothing except in the public interest, though it was established that he and his associates controlled not less than twenty-five billions of the country's wealth. We suppose that is the way of the meat trust. It can make the meat from five million more hogs cost the eaters as much as it did before.

Department of Agriculture—The number of office holders in the United States Department of Agriculture, since Mr. Wilson has been secretary, about 16 years, has increased from 2,444 to 13,858, and its annual expenditures have grown from $3,273,000 to $24,743,000. We are free to confess we see no adequate benefits to farming from this great increase in "jobs" and expenditure. When our Democratic friends come into power they can find room for "reform and retrenchment" in the Department of Agriculture.

Straw a Source of Revenue.—New straw has been selling on the market at $9 to $10 per ton. Oat straw is better for feeding purposes than wheat straw, though the latter is worth too much to allow it to go to waste. Oats produces two pounds of straw to every pound of grain—sixty-four pounds of straw to every bushel of grain. An acre, therefore, that produces forty bushels of oats, produces at the same time a ton and a quarter of straw, worth at present prices, if properly handled and baled, not less than $10. Save the straw, and depend upon it as an addition to the revenue from oats.

More Stuff, Fewer Dollars—It must not be forgotten that in 1912 the farmers of the United Ctates produced 1,233,000,000 bushels more wheat, corn and oats than heretofore, yet, on account of lower prices, it would bring, if all were sold, $80,000,000 less money.

Truck Farmers in the vicinity of Chatanooga, Tenn., are organizing to establish a market of their own. In the city market twenty-five cents per bushel was all they could get for sweet potatoes, while, at the same time, the users had to pay seventy-five cents a bushel for them. In a market of their own they can pay more and yet sell cheaper.

New Years Resolutions

The following resolutions are recommended for adoption by our subscribers:

First: Resolved, that I will read every number of Up-to-Date Farming during 1913.

Second: Resolved, that I will get all of my neighbors to read Up-to-Date Farming.

Third: Resolved, that I will see to it that a local union of the Farmers Society of Equity is organized at my place this year.

Fourth: Resolved, that I will co-operate with my brother farmers in marketing so that our combined power may compel profitable prices to be paid for our produce.

Government Horse Breeding—The United States government is a breeder of horses. The Department of Agriculture is "in it," and $50,000 was recently appropriated for that purpose. The pretext for beginning it was the alleged scarcity of cavalry horses. Thirteen stallions have been purchased so far, the following breeds being represented: Thoroughbreds, saddle horses, standard bred, and Morgans. Horsebreeding stables have been established in various portions of the country. It is safe to predict that it will cost the government more to raise horses than it costs the farmers, and why should the government thus compete with the citizens? A few years ago there was a terrible howl about paternalism. The Wilson administration will find many opportunities for reform.

Reading People—The people that succeed, and that stand out prominently in their respective neighborhoods, are the reading people. It is not enough to subscribe for a paper; to accomplish the purpose it must be read when it comes. Up-to-Date Farming tells of things you never thought of before, and it always suggests remedies, and points to better things. It does this as the minister preaches his sermons, in the hope of doing good—of benefiting the people, of bringing farmers to the front, of securing for them every advantage others enjoy, of telling them the sources of the wrongs they suffer, and of showing them clearly the better way. But the printed page can't talk; it must be read.

What Think Ye?—Of course, you have read the Lever bill, and what we say of it. Also of the apple market in Southern Illinois, of the cabbage market in Pittsburg, of the onion market in California, and the potato market in Idaho. Now, seriously, what do you think of these things? And you have read also of the mortgage-bond scheme to ultimately give the money power control of the farms and homes of the people. What do you think of that measure? Friends, you must read.

THE LEVER BILL

Agricultural Extension Thereby a Failure

(Continued from Page Three)

bills and people fail to take note of them. We are in favor of agricultural extension, as our readers all know. We are in favor of the very best of farming, of the highest acreage yields, and the most abundant crops, but first we would have a demand to meet the increase, and a marketing system that would reach the demand, and maintain remunerative prices—not the extortionate prices dealers make consumers pay, but the already scarcely remunerative prices paid in the fields.

The Lever bill does not do that; it ignores these facts altogether. The effect of it, even if its claimed purposes were accomplished, would not be to put an additional mouthful on the tables of the consumers, or to take one cent from the prices they are required to pay, but it would greatly increase the piles that go to waste on the farms and reduce the meager prices now paid the farmers.

In addition to all this, the bill has special objectionable features. Speaking of the measure, President Taft said: "It is now proposed to organize a force of three thousand men, one to every county in the United States, who will conduct experiments within the county for the edification and education of the present farmers and of the young embryo farmers who are being educated; that these men shall be partly paid by the county, partly by the state, and partly by the federal government." But, we may add, wholly paid by the taxpaying people of the country, and all by the very same people. The part paid by the general government is paid by the people in the form of higher prices on the commodities they use to meet the tariff and internal revenue obligations from which the government gets its revenue. The part paid by the states is paid by the very same people in the form of increased state taxes, and that paid by the counties is paid still by the same people as increased county taxes. It cannot be that Mr. Taft has never studied our system of raising these different classes of public revenue.

It is a fact that this feature of the bill involves what can be considered little else than a gigantic system of bribery. The general government says to the states: We will give each of you $10,000 every year if you will make your people pay an additional state tax of $10,000; and we will increase this sum up to a total of $3,000,000 annually, if you will in like proportion increase the tax required of your people. Then the states say to the counties: We will give you a certain sum annually if you will increase your county tax to correspond therewith. Looks like hiring the states and counties to increase their taxes, doesn't it?

Still our chief contention is that, in its present form, the bill cannot benefit agriculture as it is evidently intended to do. Increased production to be profitable to the producers, must be accompanied by an equally increased demand and a system of marketing and distribution that will take the stuff to the demand at prices that will enable the demand to supply itself, and still maintain equitable and remunerative prices on the farms, thus preventing the waste of surplusses, and the reduction of prices that would ruin rather than benefit agriculture. We have often shown how that can be done, and it is clearly within the province of the bill we are discussing, though that phase of the situation is entirely ignored in it. Hence it can not accomplish the good intended, and must be a failure except in giving fat jobs to many seekers and greatly increased farm and other taxation.

Smile Awhile

Better Seek a Stranger

Boughtit—Wait till I find an acquaintance to endorse my note.

Soldit.—I'm in a hurry, and I think you'd better ask a stranger.

He Had It

"Now," said the teacher, "I want a sentence containing the word "defeat." The class was silent some minutes, and then up went a hand. "Well, Johnnie, you may read your sentence," said the teacher. Johnnie read: "When you git shoes that are tite, they are hard on de feet."

He Was Interested

"Where is papa, Willie?
He's so quiet here of late."
Whispered Willie, coming from pa's room,
He's reading Up-to-Date."
Elizabeth Russell, Toledo, Ohio.

Anybody, Lord

"Would you marry him if you were me?"
"I'd marry anybody that asked me if I were you."

The Labor Problem

"Pat, are you against strikes?"
"I certainly am, yer honor, if they are coming my way."

About Alike

"So you have decided not to get married?"
"Yes; and I learn you have sold your auto. Why didn't you keep it?"
"It cost too much to keep it up."
"That's why I didn't get married."

An Easier Way

"What would you say, Mary, if I should kiss you?"
"It looks like you could find that out without asking."

At the Other End

"What pesky fool is that at the end of this line?" shouted the man who had failed to get satisfactory telephone service.
"I don't know; he's not at this end," came in a sweet and gentle feminine voice.

Thought He Must be Older

"How old are you, my little man?"
"Nine years old."
"Oh, you must be older than that."
"Mama, ain't I just nine years old?"
"Yes, dear."
"Mister, what made you think I was more than nine years old?"
"I didn't think you could get as dirty as you are in nine years."

Why Punish It?

"Susan, be sure to whip the cream."
"Mama, what has it done?" sympathetically asked little Lucy.

Hard Money

Beans—It is hard to make money.
Peas—And it is hard to keep it.

Stood Still

Jones—Has Brown a running account with you?"
Smith—I think not; it has been standing a long time.

Easy Enough

Purchaser—Why is it that there is never any cream on the milk I buy from you?
Seller—I fill the bottles so full there is no room for the cream to rise.

Same Thing

She—Is she going to advertise her engagement in the paper?
He—No; but she mentioned it to all her girl friends and told them it was a secret.

Crop Prospects *and* Market Reports

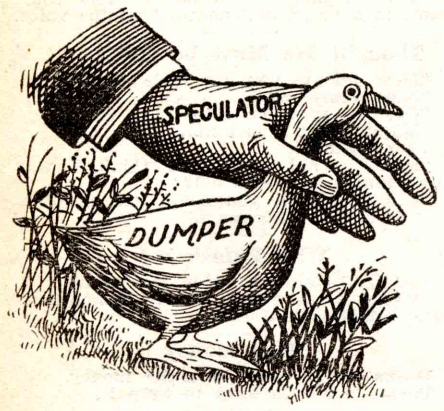
Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

NINETEEN TWELVE was a record breaking year in many respects. It was a year that will be long remembered. "I remember back in 1912" will preface many stories and reminiscences as we and our children move forward down the years. We believe it will be referred to as the good year when abundant crops broke the backbone of the old marketing system which began to give way rapidly to the new. The year that was the real beginning of the end of the sway of the speculator in the necessities of life. "Anything to induce the farmer to work harder and produce more so we will have more to handle" was the slogan of the little coterie of men who have made farmers believe they were not business men, but must let another set of people do their business.

So 1912 was a record breaker in volume of crops all along the line, and it was also a record breaker in the low prices paid for those crops. We can stand the extra work the greater crops represented and the less money they brought us, if the lesson of the year is not lost and if we conduct our farming operations so that 1913 will make up for all losses and disappointments. The plow has been started in the soil for the 1913 harvest of crops and money. What will the harvest be? It will be just what we make it. The time has arrived to begin making both the crop of farm produce and the money reward for the producer.

Nineteen thirteen is before us. Her record is to be made. It is up to the people to make that record what they want it to be in history. The farming class is the greatest class of people and they CAN have more to do with the record than all the other people combined. Let the American farmers wake up at the beginning of this new year and end speculation and gambling in the products of the farm and all the consequent disappointments, want, misery and attendant crimes. Let's have a general revolution by the many against the averice, cunning and greed of a few. There are turning points in the lives of men and in the affairs of nations. This year should be the turning point in American agriculture. Seventeen hundred seventy-six was the turning point to liberty for the



American colonies, but it was seven years before they were really free and independent. We can afford to wait seven years for farmers' freedom and independence, if necessary. But it will not be necessary if each tiller of the soil will say "this year I cast off the shackles of a vicious marketing system and will use my own, the Equity System."

The dry-weather note we sounded in our preceding issue has largely died away. Copious rains have fallen in most places where drought pinched before. The only great danger now for winter wheat is the winter. The plant is tender because of mild weather, and a sudden drop of the temperature to or around zero, with the ground bare, might prove a calamity.

The usual attention should be given to the figures that follow on visible supplies, prices, etc., and also our advice. We regret to see the visible supply of wheat still increasing. It is still below a year ago, but it is many million bushels too great. But notwithstanding a liberal increase in visible the price of cash wheat is a shade higher for winter wheat and spring wheat is 1 to 3c higher. Note the big spread between winter and spring wheat and between cash and future. The people who have the actual wheat are making the prices. The corn visible is low, but it increased more than double as much as in the same period last year. The price is a shade lower. Oats control continues remarkably good with prices practically the same as two weeks before.

The future prices of grain depend largely on the weather for the 1913 crop. If adverse weather and short crops, prices will advance very much. This, according to the law of averages, is quite probable.

The following tells the balance of the market story:

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on December 28, 1912, with comparisons, are shown in the following table: (The sign — before figures means decrease, X indicates increase.)

	Dec. 28 1912 Bushels	Change from 2 wks. before Bushels
WHEAT	70,687,000	X 1,726,000
CORN	6,895,000	X 2,938,000
OATS	12,718,000	— 500,000
BARLEY	6,035,000	X 635,000

The visible supply of wheat in Canada on the same date was 50,381,000 bushels. This is 6,877,000 bushels more than two weeks before and 14,675 bushels more than a year before. The visible supply of oats was 8,143,000 bushels on the same date, which is 1,366,000 more than two weeks before and 3,446,000 bushels more than a year ago.

CLOSING PRICES OF CASH GRAIN

Cash grain closed in the leading markets on January 4, two weeks before and a year before, as follows:

WHEAT, No. 2 RED

	Jan. 4	2 wks before	A Yr. before
Chicago	1.10 @1.10⅛	1.09½@1.10½	95½@97
St. Louis	1.09½@1.10	1.04 @1.09½	96½@98
Kansas City	1.03 @1.06½	1.01 @1.04	98½@99
Cincinnati	1.12 @1.14	1.12 @1.14	97 @99
New York	1.07 @1.08	1.08 @1.09	98 @99

Minneapolis—Spring wheat No. 1 hard, 84¾; No. 1 northern, 82¾@84¼. Two weeks before, 81⅛c and 82@83½ respectively. A year before, $1.08¾ and $1.07¾ respectively.

CORN, No. 2 WHITE

Chicago	46½@47	46 @47	63
St. Louis	49	48½@49½	65
Kansas City	47 @48	46½	67
Cincinnati	50 @51	52 @53	64
New York	51½	55	68

OATS, No. 2 WHITE

Chicago	34 @34½	35½	49
St. Louis	35 @35½	34 @34½	50
Kansas City	64 @35	34½@35	48
Cincinnati	36 @36½	37 @37½	51
New York	39½	39½@40	

FUTURE GRAIN PRICES

Chicago grain futures closed on January 4 and two weeks before as follows:

WHEAT—May, 91⅜c; July, 89¼c; September, 88¼c. Two weeks before, 91⅞c, 88⅝c respectively.

CORN—May, 48⅞c; July, 49⅞c; September, 50¾c. Two weeks before, 49c and 49¾c respectively.

OATS—May, 33c; July, 33⅛c; September, 32⅞c. Two weeks before, 33⅛c and 33⅜c respectively.

ADVICE—We predict higher prices for wheat, corn and oats. We advise against selling any of these crops unless it is winter wheat, which may be sold gradually, being careful to get all that it is worth. We recommend correspondence with millers listed in the Directory of the Farmers Society of Equity, as millers in the Central and Eastern states are paying premiums for good winter wheat. The Directory is furnished to all members of the Farmers Society of Equity.

COTTON

New York, January 4.—Middling upland, 13.30c; middling gulf, 13.55c per pound.

The price of cotton is 20c per hundred weight higher than two weeks before. It is $3.95 a hundredweight higher than a year before.

ADVICE—We do not advise storing cotton now to wait for the minimum price of 15 cents, but we advise holding if it can be held on the farm or without expense. In marketing be careful to get all that the market affords. Dealers listed in the Farmers Society of Equity Directory will secure the top price without the intervention of unnecessary handlers.

LIVE STOCK

Indianapolis Stock Market, January 4, 1913

CATTLE—Range of day's paying prices for steers ..... $6.50@8.00
Range of day's quotations for steers ... 6.00@9.00
Good to choice steers, 1,300 lbs., and upwards ..... 8.75@9.00
Good to medium steers, 900 to 1,250 lbs. 6.50@7.50
HOGS—Range of day's paying prices ..... 6.25@7.50
Range of day's quotations ..... 6.50@7.55
Best heavies, 210 lbs., and up ..... 7.00@7.55
Common to choice lights, 130 lbs., to 230 lbs. ..... 7.50@7.75

The price of steers is from unchanged to 50c a hundredweight lower than two weeks before. The price of hogs is practically unchanged from two weeks before.

CHICAGO PPRODUCE MARKET

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last Week	Last Year
Monday	42	47	*
Tuesday	43	25	124
Wednesday	*	*	143
Thursday	93	45	60
Friday	50	27	63
Saturday	63	25	50
Total, 6 days	291	169	440

*Holiday.

Market was quiet and steady. Demand was moderate, but there was not much stock offered and prices remained without material change.

Sales reported were: Wisconsin, round whites in bulk—2 cars at 45c, 2 cars at 48c, 2 cars at 49c, 2 cars at 50c.

Per bu., bulk or sacked, Wisconsin, Burbanks, Kings or Rurals, ordinary to fancy ....45@52c
Fancy Russets, possibly a shade over.
Minnesota, round, white, bulk or sacked....47@52c
Russets, in sacks ..... 50@53c

The price on potatoes is 5@10c a bushel lower than two weeks before, and 35@40c a bushel lower than a year before.

ADVICE—This is probably the best time to sell potatoes and we strongly urge our readers and members of the Farmers Society of Equity to sell now.

Change same period last year. Bu.	Change from a year before Bushels	Change from 2 yrs. before Bushels
X 990,000	—6,376,000	X 25,496,000
X 1,310,000	X 93,000	— 1,929,000
— 906,000	—9,882,000	—11,786,000
— 4,000	X 1,512,000	X 3,063,000

NEW POTATOES—Offerings are moderate of Bermudas, and small sales are made at former prices.
Per barrel, No. 1 ..... $7.00@7.25
No. 2 ..... 6.00@6.50

The price of new potatoes is practically the same as two weeks before.

SWEET POTATOES—Were a shade weaker under larger arrivals. Something like seven cars, some say more came in late yesterday. If goods are fine they are fair sale. Common or not straight packed are slow. Some very fine and nicely put up Jerseys are on sale. The best trade takes well to these goods.

Barrels, Illinois, good to choice ..... $3.50@3.75
No. ..... 1.50@2.00
Hampers, Jerseys ..... 1.40@ .
Delaware ..... 1.25@ .
Illinois, choice ..... 1.35@ .
Some fancy brands shade over.
Not clean skin or not straight packed ....75@ .85
No. 2 ..... 1.50@2.00

The price of sweet potatoes is 50c to $1.00 a barrel higher than two weeks before.

ADVICE—We advise selling sweet potatoes gradually, being sure to get all that the final market will pay.

BEANS—No change quoted as yet. Trade remains quiet. Nothing hardly doing in Brown Swedish and only small sales made of other kinds.

Pea Beans—
Hand-picked, choice ..... $2.35@2.40
Prime ..... 2.20@2.30
Stock faulty ..... 1.90@2.00
Mediums nominally about same as Pea Beans.
Red Kidneys, choice ..... 2.25@2.35
White Kidney ..... 2.85@3.00
Brown Swedish, long, nominal ..... 1.50@2.00
Limas, per 100 lbs. ..... 6.50@ .

The price of pea beans is 5c a bushel higher than two weeks before. The price of Red Kidneys is 10@15c a bushel higher. White Kidneys and Limas unchanged.

sure to get all that your beans are worth. Handpicked sure to get all that your beans are worth. Some beans command much better prices than others on the market. Growers will do well to put in some of their spare time in the winter to putting their beans in first-class condition.

HAY—Receipts, 1,334 tons. Choice Timothy and Prairie Hay steady. Demand fair and offerings small. Low and medium grades dull. Supply large and demand light.
Choice Timothy Hay ..... $15.00@16.00
No. 1 Timothy ..... 13.00@14.00
No. 2 Timothy ..... 11.50@13.00
No. 3 Timothy ..... 9.00@11.00
Kansas and Oklahoma Prairie, choice ..13.50@14.50

Hay is $1@4 a ton lower than two weeks before. A year ago the price of choice timothy hay was $22@22.50.

ADVICE—Hay should be held back and the glutted markets relieved.

STRAW—Rye straw quotable at $7.50@8. Oat straw at $7@7.50. Wheat Straw $6@6.50.

Rye straw is 50c a ton lower, other kinds unchanged, from two weeks before.

BROOMCORN—No change yet. The market remains quiet.
Per ton, Illinois corn no nice quality offered ..... $120.00@130.00
Oklahoma ..... 60.00@100.00

There is much low grade broom corn in the market this year, and low prices are being paid for it. However, the prices above quoted do not reveal the price that choice broom corn will command if the top of the market is realized. Sales of choice Illinois broom corn were made recently at $200 a ton.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week. Cases	Last week. Cases	Last Year. Cases
Monday	2,801	2,053	* ...
Tuesday	...4,776	2,681	1,894
Wednesday	...† ...	* ...	2,909
Thursday	3,352	2,079	1,690
Friday	3,218	3,766	749
Saturday	6,985	2,419	1,676
Total	21,132	12,998	8,888

†New Years. *Christmas.

Receipts April 1, 1912, to Jan. 4, 1913, 2,822,574 cases.

Receipts, April 1, 1911, to Jan. 6, 1912, 2,450,507 cases.

Receipts April 1, 1910, to Jan. 7, 1911, 2,786,973 cases.

Market was quotably firm today at slightly shaded prices.

Miscellaneous lots—by this is means eggs as they arrive from the country—cover a wide range. The top figures only obtainable for eggs which run better than Firsts—posibly over 60 per cent. of new laid 17½@22½c depending on quality.
Ordinary Firsts quotable at 18@19c.
"Firsts" quotably 23c per dozen.
Checks—Fresh quotably 15c per dozen.
Dirties—Fresh quotably 16c per dozen.
Refrigerator eggs met with a moderate demand.
April Firsts quotably 17@18c.

ADVICE—Much higher prices can be obtained in some of the markets for fresh eggs. For instance, in Indianapolis, they range around 25@33c a dozen. Of course, we recommend marketing once or twice a week while fresh.

APPLES—Business was quoted as rather slow in this line, and the market remains well supplied. Dealers have been looking for some improvement but it does not come. Demand is only moderate and there is an ample supply.

MISCELLANEOUS NEWS

A dispatch from Larned, Kas., is as follows:

Much discouragement is noted in the broom corn sections of western Kansas and Oklahoma, because of the markets this season. Practically no good has been derived from the wide-spread movement to stand pat for higher prices, and many raisers are planning to discontinue growing the crop. This bitterness is especially noticeable near Woodward, Okla., where a one hundred per cent. average crop is bringing $22.50 to $70 a ton."

Any local movement to "stand pat" for higher prices is bound to fail, because other sections will supply the markets, while those are holding. While the above dispatch refers to a "wide-spread" movement, we know that it was not a comprehensive movement covering the broom corn growing districts of the country. Also, any success in maintaining good prices for broom corn that does not include other crops, must necessarily be short-lived, for the reason that when one crop is proportionately higher than other crops, the growing of that will be overdone. What broom corn growers need is a National organization such as this paper recommends.

Another dispatch from Secretary Wilson says:

"A cheapening of farmers' cost of marketing will naturally result in gain to the producer rather than the consumer. If the consumer is to benefit by changes in the cost of distribution, it seems probable that he must do so by cheapening or eliminating cost at his end of the chain of distribution."

This is the secretary's recommendation to reduce the high cost of living.

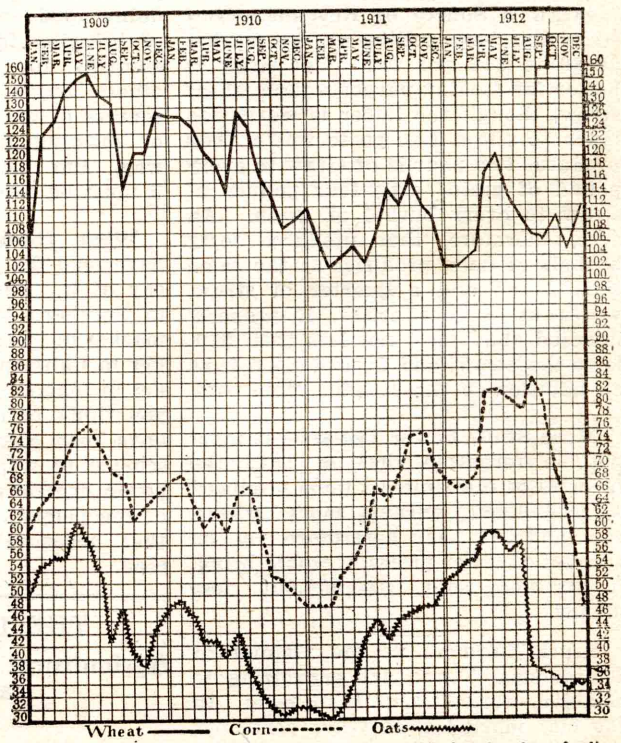
Representative Backrick, of Ohio, has introduced in the House a bill that provides for loans of money by the government to farmers on mortgages. The bill proposes to create a Bureau of Farm Loans in the Treasury Department.

A dispatch from Chicago of January 6 announced that an advance of 10 per cent. in the price of vehicles is probable as a result of a meeting at Chicago of representatives of carriage and accessories trades. President C. C. Hull, of the Carriage Builders' National Association, said: "It was the sense of the meeting that this advance is justified by the increased price of everything entering into the manufacture of vehicles."

James Wilson has made another request for money for his department which is probably the last call he will make on Congress during his administration. This call is for an increase in the appropriation to continue the enforcement of the Pure Food Law. The Secretary said: "A good many people have expressed dissatisfaction with our efforts to enforce the pure food law, but we have done as much as we could with the means at our command, and during the last year we have made that branch of the department twenty-five per cent. more efficient.

A dispatch from Washington dated January 6th, refers to a strong sentiment arising in Congress in favor of the repeal of the free toll provisions of the Panama Shipping act.

At the last session of Congress a law was passed ordering the United States Department of Agriculture to distribute free of charge, alfalfa and millet seed adapted to dry farming conditions. The first distribution will be made next spring.



This chart shows the highest monthly cash price for the three leading grains at Chicago, for a period, 1909 to December, 1912, inclusive. The figures on right and left margins are prices in cents. The lowest prices for December were as follows: Wheat, 98c; corn, 46c and oats, 33½c. This chart will be continued.

In and About the Fields

Production and Marketing

FARM CONTROL OF INSECT PESTS

THERE can be no doubt that there is a great increase of insect pests. They commit disastrous ravages in the gardens, orchards and fields. How to combat them is a great problem before the producing world. The field pests mostly hibernate or pass the winter in the soil a few inches below the surface. Fall or early winter plowing is a good way to destroy these. The plowing breaks up their winter home, exposes them to the rigors of the weather, and destroys them. The destruction of these hibernating insects prevents the coming of the destructive broods the following season.

As different pests prey upon the different crops, rotation of crops is a helpful means of reducing their destructiveness. And as this rotation or change of crops in the fields is a relief to the soil also, it is doubly commendable.

Many orchard pests likewise winter in the ground, and in orchards that are not cultivated, pasturing with hogs in the fall, both before and after the fruit is harvested, there being an interval when their presence would be destructive of fruit of value, is an effective means of destruction. Do not ring the hogs; let them root. Their rooting will beat plowing in the destruction of insects because the hogs eat the insects, and their rooting is largely in quest of them. It is amazing how a few hogs will turn over the ground in an old orchard. The trouble is, it leaves the ground rough and unsightly. Orchards so treated should be worked down in the spring, and if seeded to peas, clover or alfalfa, the result is the completion of a well-begun work.

A careful cleaning up of the garden so soon as the season's production is completed, is a good way to fight the pests there. Late fall plowing, or even winter plowing when the ground will permit, continues a successful warfare. When the garden is plowed, no matter at what season, give the poultry free access to it, and the fowls will make themselves an efficient ally.

Finally, burn over all the waste places. Let there be no accumulations of rubbish, brush, weeds or grass. Such burning, of course, cannot be done in places where dewberries, blackberries, or other wild fruits are expected, as the burning will destroy the vines. It is true, though, that these places are the very worst insect harbors.

Last, but not least, as the writers say, protect the birds. Some think the reduction in the number of birds is responsible for the increase of the pests, and there is apparently good reason for thinking so. At all events, farmers in almost all parts of the country are up against this fight against insects, and the more persistently they pursue it the better will their crops be.

TOO MUCH ONIONS

THERE is a lesson for the "produce more" people in the onion crop of California. A dispatch from Stockton tells us that because truck gardeners have been throwing onions into the San Joaquin river on account of its being impossible to sell them at any price, the industrial organizations of the city have taken steps to send a trainload of garden products to the poor of one or more eastern cities. In a very short time six carloads of onions and potatoes had been contributed, and the canvass is to be continued.

Still college professors, newspaper writers and demonstration trains are urging the farmers to produce more and more, without any thought of the marketing or what is to be done with the stuff after it is produced. These California gardeners and truck growers have lost their season's work simply because they produced—too much. Over production of any crop must necessarily have the same effect. Increased demand and a marketing system that will reach the demand, is ruinous to agriculture we do not care who favors it, and it is time the great men of the country awoke to the fact that there are two sides to farming. First secure a means for disposing of the crops, and then we'll all join in urging increased production. The first essential to successful farming is to sell the surplus at profitable prices.

The value of American farm lands is now put at $41,000,000,000, which is an increase of $21,000,000,000 in the last twenty years. There are 6,000,000 farms in the country, with a total area of 900,000,000 acres. It is estimated that of the total number of farms more than 5,000,000 are worked by the men who own them.

Readers of UP-TO-DATE FARMING have the opportunity to buy at rock-bottom prices from one of the largest companies in the world selling all kinds of merchandise direct to the consumers. With facilities for buying unsurpassed, prices are very attractive. We refer to the Chicago House Wrecking Co., Dept. A. G. 135, Chicago, Ill., who are known as the "Price Wreckers." Send for big free 1,000 page catalog and be convinced.

Worth More Than Ten Others

DEAR MR. EVERITT: I take ten farm papers, and I must say your UP-TO-DATE FARMING is worth more than all the rest put together. Their editors are like our farmer institute instructors; they have all fallen into a rut that runs in a circle. According to their teaching the road to prosperity can never be reached except at the expense of the farmer. With corn at 38 cents per bushel, oats 28 cents, timothy hay $8 per ton, potatoes 30 cents per bushel, and onions so low they were left in the fields to rot, though some were so fortunate as to get 12 cents a bushel for them, Secretary of Agriculture Wilson still continues to hammer the farmer. I am sure if you, Mr. Everitt, could step into his shoes, there would be a rattling of "dry bones in the valley."

What profit is there to the farmer though he may produce a million bushels of corn at a cost of 40 cents a bushel and sells it at 38 cents a bushel?

Thanking you for the many good things in your paper, I remain,

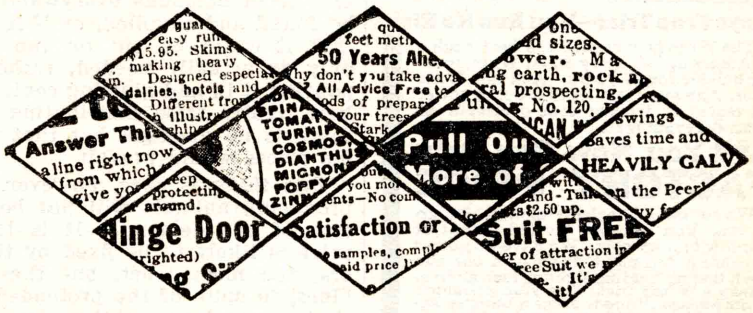
Your sincere friend

Star City, Ind. E. C. BISHOP

PUZZLE

Name the ten Advertisers Represented below

Just a little of your time may win for you the first prize in this interesting contest



EXPLANATION

We reproduce above portions of ten advertisements in this issue. For instance, the first one is from the advertisement of American Separtor Co. The others you are to find.

CONDITIONS

In addition to the solution of this puzzle it is a condition that each contestant, in order to have his answers considered, shall write a special letter telling us his or her experiences in raising poultry—chickens, turkeys, ducks, squabs, etc. Letters dealing with the use of incubators will be especially acceptable.

In case of a tie, prizes will be awarded to the ones writing the best letters.

Answers to this contest must be written entirely separate from orders or letters on other subjects, otherwise they will not be considered.

Contest open to every reader living outside of Indianapolis and Marion County, Ind.

All answers to be considered must be received before February 1.

We can not answer letters regarding this contest; the conditions given must be complied with.

PRIZES

First prize, to correct answer and neatest and best letter $3.00
Second prize 2.00
Third prize 1.00

A present will be given to each of the next 10 sending correct answers and neatest and best letters.

ANSWERS TO DECEMBER 15TH PUZZLE

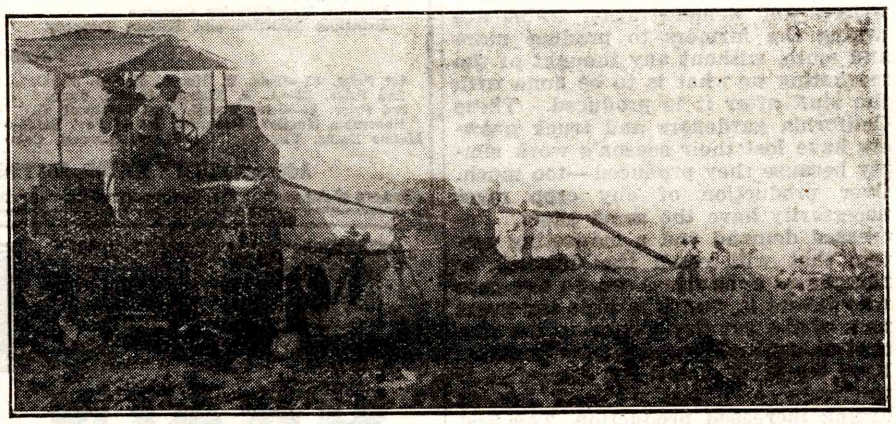
CORN AND STOCK

THERE was an immense corn crop produced in this country last year, and there is some question as to how prices may rule next spring and summer. If the market was such that local demands everywhere could be found and supplied, or if it was so that it could be put on the market only as actually needed, rather than pouring it in and glutting central markets, really false distributing points, there is no question but that profitable prices would prevail.

One thing is sure, however. Meat producing animals will not be in excess of the demand. It is true the price is likely to be fixed by the buyers, the meat trust, but these combines, in spite of the pretended investigations and prosecutions by the government, will keep the price of meats high. They will also try to get the meat producing animals at the lowest possible prices, but the very conditions that surround the packers will impel the payment of fairly reasonable prices for stock. The fact remains, then, that it is safe for farmers to grow and feed stock. Corn thus used, if the stock be thrifty, will be well sold. Hogs particularly appeal to the profit side of farming, and he who has pigs and shotes may confidently push them. So also of young cattle. The selling of calves by farmers is a mistake. Calves soon grow into steers and heifers, and heifers into cows, and for all of these there is a good demand and will continue to be. Besides, if managed well, this class of stock may be fed the cheaper feeds, feeds that would not readily command cash. In that respect their production amounts almost to a saving. But the better feeds should not be withheld. The cheaper stuff should be regarded only as supplemental feeds, much as the grass lots and pastures are regarded during the growing season.

And that reminds us that whenever we speak of raising meat producing stock on the farms, the pastures come in as a strong feature. The grass and even weeds of the pastures cost nothing. The value of the land, of course, must be considered, but there is no labor to account for, and here the stock are making dollars. This is as true of hogs as it is of cattle and sheep, and we are always glad when we see stock on the farms.



AN UP-TO-DATE FARM WITH UP-TO-DATE METHODS.

WINTER WHEAT ACREAGE

ACCORDING to the Department of Agriculture the acreage sown to winter wheat last fall was less than that of the year before. In 1911, 33,215,000 acres were sown to winter wheat, but last fall only 32,387,000 acres were sown, a reduction of 828,000 acres or 2½ per cent. less than the year before. But the condition December 1, 1912, is better than the condition of the crop December 1, 1911, the 1912 condition being 93.2 per cent. and that of 1911 86.6 per cent. This would indicate, future conditions being similar, practically the same winter wheat crop to be harvested in 1913 as was harvested in 1912.

LEGUMINOUS CROPS AND LIME

IT IS almost impossible to maintain soil fertility in a natural way without growing leguminous crops, and these crops will not grow to do any good in acid soil. The first essential to growing clover, alfalfa, field or cow peas, sweet clover, or any other legume, is a sweet soil, by which we mean a soil that is not acid. If a soil is acid a lime treatment is the remedy, and if the acid is at all pronounced the treatment of lime must be thorough, and it should be well worked into the soil. After that, clover seed, or the seed of any other legume may be planted with confidence; and when these can be induced to grow luxuriautly the fertility of that soil is assured, and it may be relied upon for the production of almost any crop. If the legume be turned under in any stage of its growth, it will add humus and more or less phosphate as well as nitrogen. The farmer that cannot grow the clovers should promptly turn his attention to lime.

No little interest is now being taken in sweet clover, a plant that has heretofore been regarded in many places more as a weed than a forage crop. In northern Kentucky it is being made a prominent crop, and is doing much to rejuvenate the exhausted hill soils of that region. Most legumes require an abundance of humus in the soil to make good growths, but sweet clover will grow in soils that have very little humus. It is said also to succeed in almost any climate, and on any type of well-drained soil. The bacteria of the sweet clover is the same as that of alfalfa, and the latter plant may be expected to grow where sweet clover will.

RETURNS FOR FARM LABOR STRAWS

FAITH is good, but too much faith and little action will never sell a crop. Mark Twain said, "Put all your eggs in one basket and watch that basket." If the basket has F. S. E. printed on it you are safe.

Give the other fellow's opinion a hearing; you expect at least that of him.

Good luck and waiting never made a crop, did they? Well, they will never sell one, profitably, either. And the most important part is to sell the crop. That is where the money is obtained. If you wait for some one else to sell the crop the chances are that he will get his share of the proceeds first and that may mean small meat for you. Better get a good system of your own for selling.

Don't Fool With Wood Shingles

Buy STEEL Shingles

They Cost Less, Last Longer, Are Easier to Put On and Are Fireproof

This is the Age of Steel. Wood shingles have gone out of date. Cost too much. Too much bother to put on. Rot out in a few years. And they multiply by 10 the danger of fire.

Thoughtful men are nailing STEEL Shingles right over their old wooden roofs.

And those putting up new buildings are likewise careful to choose STEEL SHINGLES.

Edwards STEEL Shingles

come in big sheets of 100 shingles or more. Don't have to put them on one at a time like wood shingles. Just nail the whole sheet right over old roof or on sheathing. No extras, no painting, no tools needed. And money can't buy a more handsome roof.

Absolutely Rust-Proof

Don't judge Edwards Steel Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely prevents rust from getting a foothold, as 100,000 delighted owners of Edwards Roofs have found. It's the famous Edwards Tightcote Process.

Protection From Fire

Don't take chances of fire from defective chimneys, flying sparks and lightning. Roof your buildings with these STEEL Shingles and make them safe. Remember, nine out of every ten fires start with the roof. We specifically guarantee every Edwards Steel Shingle Roof against lightning. This guaranty is by a $10,000 Cash Bond.

Write for Special Factory Prices —Freight Prepaid

We sell direct from factory to user, thus saving you 40%. And our business is so big that we cut our profit-per-sale to about half the maker's usual profit. And we pay the freight. Amazing as it may seem, these STEEL Shingles actually cost LESS than wood shingles.

Send postal at once for our latest Roofing Book No. 191 and Special Factory Prices. Give size of roof, if you can.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r., 59 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

STORM BUGGY

$58.75

Top notch quality—strength—durability. Built to last. Glass windows in sides and front—roll curtain in rear. Close fitting—non-binding sliding doors. Front window may be fastened against roof in fair weather. Absolutely no rattle to doors or windows. Wide—comfortable seat. Plenty of room for two large people. Easy riding. Oil tempered springs—selected hickory wheels—body heavily ironed at corners. Strong, well braced double reach gear, heavily ironed and braced. Guaranteed exactly as described or money back. LITTLE GIANT CORN SHELLER

Just Out and Entirely New

This sheller is a little wonder. Will do the work equal to any other hand sheller. No springs to jar loose, and adjustment simple and accurate. Impossible to get out of order. The sheller deposits the corn in the box on which it is mounted, and the cobs outside. Is made on honor and will last a lifetime. Will easily shell eight bushels per hour. Price 75c F. O. B. here.

75c

O. K. SEED STORE
INDIANAPOLIS INDIANA

ALL AROUND THE FARM

THE largest sized sheep are not the best sellers, the best breeders, nor the best producers of wool. The medium sized like the Shropshires, are hardiest as lambs, easiest kept, more nearly always ready for market, produce as much and usually a better quality of wool, and they do not show age so quickly as the so-called large breeds.

The winter poultry quarters that has not as a part of its equipment a dry scratching shed, lacks a most essential feature.

The best way to keep the poultry house free from pests and disease is to clean out the droppings every morning, and sweep the house clean unless it is kept littered, and, in that case, renew the litter every few days.

It is said a flock of 1,200 turkeys were driven into the Sedalia, Mo., market just before Christmas. They averaged 16 pounds and brought 16½ cents per pound—$3,168 for the flock. They were driven twenty-five miles, and traveled two miles an hour.

Ducks are profitable, but it must be confessed they are troublesome unless they can be kept away from the house and yard. We regard the Imperial Pekins as the most profitable to raise. They are rapid growers, good weighers, fine for the table, and produce valuable feathers.

Growing colts should have food rich in protein—the flesh-forming material. Corn alone is not enough. Corn and good timothy hay is fair, but corn and unmusty clover or alfalfa is better, though if they are given all they will eat they are liable to eat too much clover.

The best fertilizer, at least in the corn and wheat belt, is a clover or field pea crop. These bring the nitrogen from the air and fasten it in the soil. If turned under at anystage of their growth, or even after the hay crops have been cut they add humus and phosphate. Peas though need to be sown early and cut early to accomplish that.

More than seven million bushels of wheat were exported from this country during the next to the last week of 1912. When are the American farmers going to let the people starve? Or when is that battle for food to begin?

ONIONS IN INDIANA

ANOTHER strenuous lesson on the more-production idea is found in the following press dispatch. The Lever bill would not make these people any better prices for their onions, nor would the land-mortgage scheme help those unfortunate farmers to pay back the money they borrowed to grow onions:

Grovertown, Ind., Jan. 3.—The onion crop in this section of the state is suffering from too much of a good thing. Hundreds of bushels of the onions are going to waste in the fields and in open bins around Grovertown, Ind., just west of Plymouth, because the gathering of the crop would entail an expense greater than the value of the onions themselves. They are selling at fifteen cents a bushel at Groverstown, with not enough bidders to begin to handle the crop.

In Starke county farmers borrowed money right and left to put out onions. They got them out all right, but they were not worth getting in again. In the early part of November onions were freely offered at twenty cents on board cars in San Pierre.

Not only are the onions a record crop in quantity this year, but they are of excellent quality. One great field bin containing at least 1,500 bushels is standing neglected on a big ranch near Groverstown. The onions now are frozen, and as soon as a thaw comes will rot and become worthless. No effort apparently has been made to get the onions out of the bins, the owner figuring that to handle them any considerable distance at fifteen cents a bushel would be throwing good money after had.

In the same district field after field is found in which the crop has not even been gathered into bins, but simply has been allowed to remain in the ground and rot.

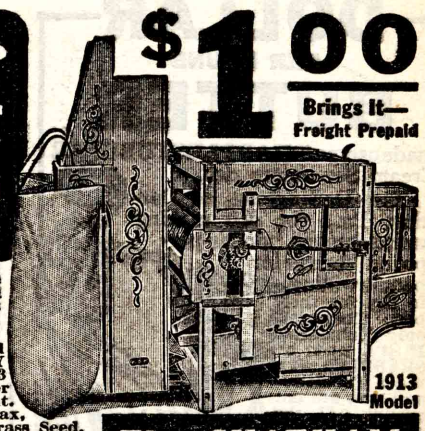
One Dollar

Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded

Manson Campbell

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.



$1.00
Brings It—
Freight Prepaid

1913 Model

The CHATHAM
Grain Grader and Cleaner

Your Dollar Returned

if you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment.* Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing.* Send postal *today* and receive by *next mail* my new Book *free.* Address Dept. 81,

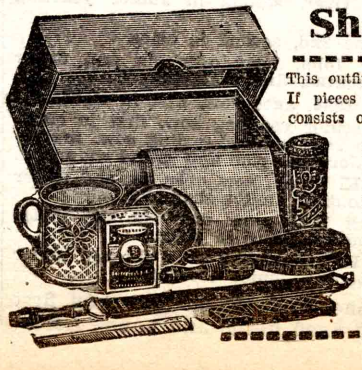
Shaving and Toilet Outfit



This outfit as illustrated is needed by every man. It is a big bargain. If pieces were bought separately it would cost several dollars. Outfit consists of:

1 hollow ground razor	1 bar shaving soap
1 lather brush	1 box talcum powder
1 razor strop	1 china mug
1 nickel easel back mirror	1 aluminum comb
1 33-inch barber towel	1 bristle hair brush

Outfit makes a nice present to father, brother, son or friend. Given to anyone sending only 4 yearly subscriptions at 50 cents each (total, $2.00). Sent prepaid.

UP-TO-DATE FARMING Indianapolis, Ind.

DOLLAR PER POUND BUTTER

made users of SHARPLES TUBULAR Cream Separators rich.

The Darlingtons, of Darling, Pa., got rich making world-famous "dollar-per-pound" butter for people willing to pay for the best. They use only Tubulars. If it's not a SHARPLES, it's not a Tubular—and you are not getting all the profits. That's why 100,000 dairymen in Iowa alone use Tubulars.

$3,000 A YEAR WITH A SHARPLES

That, and more, is what Mr. Chas. Foss, practical dairyman at Cedarville, Ill., is making—using a Sharples Dairy Tubular Separator on a 16-acre farm. Thousands are doing like good work—but they all use Tubulars.

Rich people, willing to waste money, may not use Tubulars, but those making fortunes at dairying do.

UP TO DATE LIVE STOCK AND DAIRYING

THE STOCK WE BREED

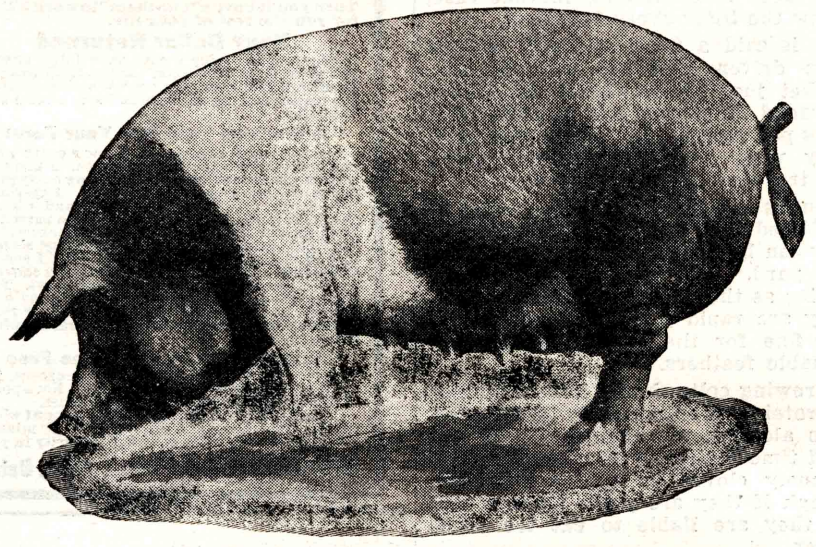
FARMERS are thinking of many things now that they did not think of a few years ago; and while so much is being said about stock, its scarcity and high price, farmers themselves should think of its quality. It is just as easy to breed good stock as poor; and it always looks so much better. None but the best males should ever be used, and the young stock should always be kept in a growing condition.

This applies to horses, mules, cattle, hogs and sheep. Yes, and it may apply to the poultry yard as well.

Judgment, enterprise, progressive thought in this direction, is a constant builder-up, and those who stick to the best and reproduce no other have a right to expect best prices.

LOOK TO THE COLT'S FEET

Do not neglect to level the colt's feet when they are brought in from pasture. The feet may be worn uneven, especially if the colt has been running in a stony pasture. Nippers and a rasp should be used. If this task is neglected the colt is liable to develop blemishes or become crippled. Awkward movers are often made by allowing the feet to grow crooked.



INTERNATIONAL LIVE STOCK EXPOSITION PRIZE WINNER

GOLDIE 8896, SAL TONE STOCK FARM (JOHN E. ROBBINS, PROP.), GREENSBURG, IND., AGED SOW FIRST IN CLASS, AT INTERNATIONAL LIVE STOCK EXPOSITION, CHICAGO, 1912. FIRST IN CLASS SENIOR AND GRAND CHAMPION IOWA STATE FAIR, 1912, ALSO FIRST IN CLASS INTERSTATE FAIR, SIOUX CITY, IA.; NEBRASKA STATE FAIR, SOUTH DAKOTA STATE FAIR, ILLINOIS STATE FAIR, 1912; CHAMPION SOW NEBRASKA AND SOUTH DAKOTA FAIRS, 1912.

WONDERFUL SHOWING OF HAMPSHIRE HOGS

THE prizes won by the SalTone Stock Farm at the 1912 International Live Stock Exposition, in Chicago, on Hampshire hogs created a genuine sensation. This herd is undoubtedly the finest collection of Hampshire hogs in the world.

The SalTone Stock Farm is located at Greensburg, Decatur county, Indiana. John E. Robbins, proprietor, has long been known as an importer of fine Jersey cattle, and a breeder of prize-winning horses, hogs and sheep.

The following list gives briefly the winners of some of the SalTone Hampshire hogs at the recent International Live Stock Exposition:

Longfellow 3191, aged boar, grand champion.

Signet Over, second in Junior yearling class.

Sal Tone 2nd, second in class.

Doctor John, boar over six and under twelve months, first in class.

Goldie 8896, aged sow, first in class.

Lucy, senior yearling sow, first in class. Keepsake 2nd, junior yearling sow, first in class, senior champion and grand champion.

Retta K. 19642, sow over siv and under twelve monthh, junilor champion.

Keswick Bells, sow over six and under twelve months, third in class.

Retta K. 19642, sow over six and under twelve months, junior champion.

SalTone Stock Farm also won first prize on aged herds and young herds.

EMPIRE Cream Separators ARE REMARKABLE

Weight of the crank turns the Empire

Engineers and mechanics judge machines by the "feel" and the "sound." We do a world-wide business with people who depend on the "feel" and "sound" of Empire Cream Separators.

Weight of Crank Starts Empire

The crank of the Empire is short and light, yet the mere weight of the crank starts the machine.

Almost Silent in Action

The Empire runs so quietly it would not wake the average baby asleep in the same room. This practically noiseless running is a great achievement. Empire Cream Separators are remarkable for easy, quiet running. The reason is the wonderful perfection of design and construction. For over a generation Empires have been preferred by those who judge by the "feel" and "sound."

Free Trial or Exchange

You may have a free trial of an Empire. You may exchange your present separator for an Empire.

Ask for Catalog 107. You get as quick and courteous attention from us, and from our local dealers, as you get fast, clean skimming from the Empire.

DE LAVAL CREAM SEPARATORS

Don't Delay Buying One a Single Day Longer

If you are selling cream or making butter and have no separator or are using an inferior machine, you are wasting cream every day you delay the purchase of a De Laval.

There can only be two real reasons why you should put off buying a De Laval; either you do not really appreciate how great your loss in dollars and cents actually is or else you do not believe the De Laval Cream Separator will make the saving claimed for it.

In either case there is one conclusive answer: "Let the De Laval agent in your locality set up a machine for you on your place and see for yourself what the De Laval will do."

You have nothing to risk and a million other cow owners who have made this test have found they had much to gain.

Don't wait till Spring. Even if you have only two or three cows in milk you can buy a De Laval now and save half its cost by Spring, and you can buy a De Laval machine for cash or on such liberal terms that it will actually pay for itself.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

THE DE LAVAL SEPARATOR CO.

WOOLLY FACED SHEEP

THE following from the London Live Stock Journal gives the views of an English shepherd on breeding for head covering. The writer says:

It appears as though increased attention was being paid to the question whether certain points to which judges of sheep are partial are of suffcient practical importance as to warrant the value placed upon them.

For instance, is the muffled head, which many judges of Shropshire sheep seem to value so highly, of any practical value? Is it an indication of an increased cut of wool or of wool of improved quality? Does a sheep possessing this muffled head produce when slaughtered a better carcass of mutton or one furnishing a large proportion of lean meat? Is a muffled headed Shropshire more prolific and a better suckler? Does it grow and thrive better? If it be not superior in the above respects, in what other way is the muffled head an indication

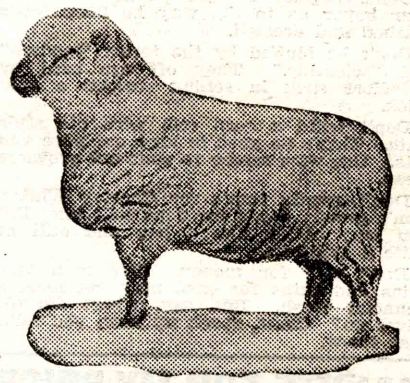

Photo by University of Idaho.

The imported Shropshire shown is in the University of Idaho flock. Note wooling of face to point of nose. Many admirers of Shropshires consider them the best wool and mutton sheep of any of the breeds. They are hardy, good mothers, generally produce twins, and a good flock should have at least 150 per cent. in lambs. The lambs mature early and are in great demand by butchers. Shropshires should average nine to ten pounds of wool.

of superior commercial qualities, and what are they?

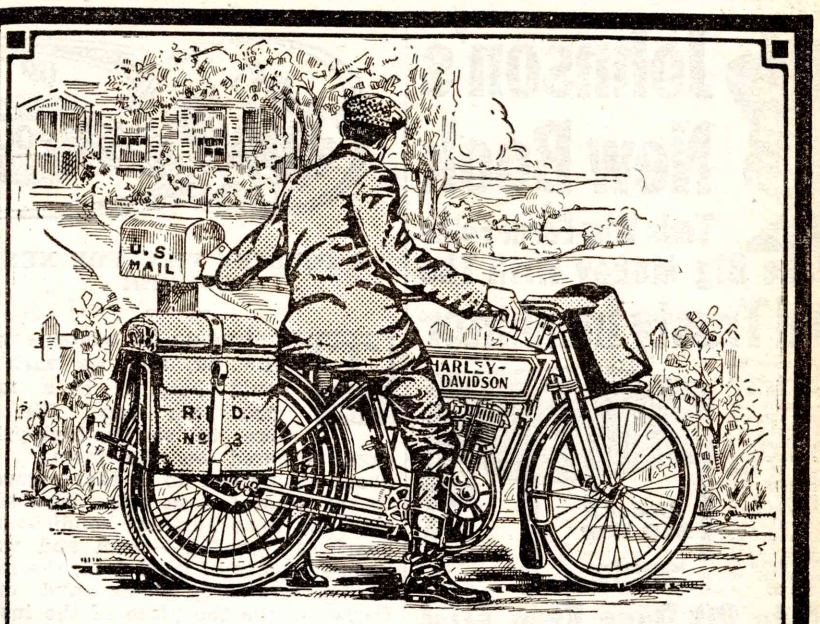
I am not asking these questions for the purpose of calling attention to the fact that serious doubts are being cast on the value of the fashionable Shropshire as a practical farmer's sheep nor to the alleged general complaint of the butchers that the prize winning Shropshire of the day is deficient in its loin and its leg mutton and that the proportion of fat to lean is too great to suit the public demand. My object is rather to warn the present day breeders of Southdown sheep of the great danger that they are likely to fall into unless the present tendency on the part of some Southdown judges of placing undue favor in the plentitude of wool on the face of the Southdown is discontinued.

It has been asserted by some of our most observant breeders of sheep that a large increase in the amount of wool on the face of a sheep almost certainly indicates a decrease of lean meat in the carcass of the sheep. This view is certainly supported by the decisions of the judges of the carcasses of sheep at the Smithfield and other shows, where the major portion of the prize money is awarded to the carcasses of sheep which in life had moderately clean faces.

It is a point of much importance and one which is worthy of discussion by some of our eminent flockmasters.

During the first four months of 1913 it is predicted that there will be a three million shortage in hogs in the ten leading markets. We do not know whether that is true or not, but the farmer that has some thrifty pigs and shotes may well afford to feed them.

If possible have sunshine and ventilation in the stalls whether for horses or cattle. It means better stock on less feed, fewer pests and greater freedom from disease.



A New Model of the Silent Gray Fellow

MORE pulling power at low speeds, more power on the hills, more reserve power for sand and mud. That was the demand our engineers set out to satisfy by building the

HARLEY-DAVIDSON "5-35"

(5 actual horse-power—35 cubic inches piston displacement). Dynamometer tests show that this motor develops 166 per cent. more power at 5 miles per hour than even the former 4 horse-power Harley-Davidson, which was the acknowledged leader in its class. 145 per cent. more power at 10 miles an hour, 80 per cent. more power at 20 miles an hour.

It will climb hills, pull through sand and over roads impassable to the average automobile. The "5-35" motor will pick up from a standing start to forty miles an hour in 300 feet. At low speeds this machine develops more power than some twin cylinder machines with higher horse power rating.

The Ful-Floteing Seat (an exclusive Harley-Davidson feature) places 14 inches of springs between the rider and the bumps. The springs absorb all jolts, jars and vibrations, making the Harley-Davidson ride as easy as the highest priced touring car.

The Free Wheel Control (another exclusive Harley-Davidson feature) is incorporated in each model this year. This device enables the rider to stop and start his machine by the mere shifting of a lever, thus doing away entirely with the tiresome pedaling and the objectionable running alongside to start.

Description of these and other features on request.

HARLEY-DAVIDSON MOTOR CO.
642 A Street MILWAUKEE, WIS.

SPECIAL Gold Plate Finish Watch

for man or boy this is a dandy. When people ask you for the time, pull this gold-finish watch out of your pocket and it will look like a $25.00 watch.

UP TO DATE IN THE POULTRY YARD

A POULTRY VIEW FOR NEXT SUMMER

THE struggle for winter eggs is now on, and we wish we could help it even more than we can. We do like to see the high-priced eggs gathered on the farms. But about all we can do in that regard is to say what has so often been said; give the hens summer conditions as nearly as possible—clean and warm houses, plenty of good feed, the grain in dry scratching sheds, and other feeds to take the place of the insects and grass obtained in summer, plenty of grit, water, etc. This is the course that invites winter eggs.

But the plans for next spring and summer should be in the mind now. On account of the high prices that have been paid for eggs for several seasons, even through the summer months, have induced many hitherto extensive poultry raisers, to raise but few chicks and thus save the hens for egg production. The use of incubators may accomplish this same purpose and yet afford a full supply of young chicks.

However, this very cutting out of the usual production of young chicks may result in an over-supply of eggs and an under-supply of young chickens for the market and pullets for next winter's laying. Therefore, even where incubators are not used, we believe it is well to set hens early and raise the usual number of young chicks. We are sure it will be profitable. The thing is, to do it in such a way as to suffer fewest losses. Keep the hens that are to lay the eggs healthy by having them always in clean and sanitary quarters, and kept on suitable feed, taken with reasonable exercise. Also have a thought of the runs for both hens and chicks next spring. These must be healthful, attractive, covered with grass that is not allowed to grow too high, and also with plenty of shelter coops where the hens and chicks may take prompt refuge from spring or summer rains and storms. From now on frequently sprinkle lime over the ground that is intended for these runs. That will save all danger from gapes or other chicken diseases.

Because poultry raising is an employment in which the farmer's wife and daughters can engage and leave him free to attend to other departments.

Because it will bring the best return in the shape of new laid eggs during the winter season, when the farmer has most time on his hands.

Because to start poultry raising on the farm requires little or no capital. Under any circumstances, with proper management, poultry can be made with little cost a valuable adjunct to the farm.

Dont's

Don't neglect to get particulars from your buyer as to the way he likes fowls finished and dressed.

Don't be bluffed by the terms "modern" and "scientific." They oft are used by swindlers slick in selling suckers a gold brick.

Don't build a corn crib with old style slats. That's no good to keep out mice and rats. Use wire screen to shut out prowlers mean.

Don't grunt; that's for Chester Whites. Don't growl; that's for dogs that bite. But you may cackle like a hen and still be quite a gentleman.

Don't live for money. The man who skins and skins for cash may not meet a financial crash. But, say, where did old Dives go? Come, speak up now, you folks that know.

WHY CHICKENS PAY

A WELL known Canadian professor at Ottowa, in reply to the question, "Why is poultry valuable to the farmer?" gave the following reasons:

Because he ought by this means to convert a great deal of the waste of his farm into money in the shape of eggs and chickens for market.

Because with intelligent management hens ought to be all year revenue producers, with the exception of perhaps two months during the molting period.

Because poultry will yield him a quicker return for his capital invested than any of the other departments of agriculture.

Because the manure from the poultry house will make a valuable compost for use in either vegetable garden or orchard. The birds themselves, if allowed to run in plum or apple orchard, will destroy all injurious insect life.

Because, while cereals and fruits can only be successfully grown in certain sections, poultry can be raised for table use or layers of eggs in all parts of the country.

Her Hungarian Lover

I WONDER why it is that the foreigners usually win the American girls when they set their heads on it?" Ben Harmon teased Jane Barrow. His heart was breaking; but she would be happier if she did not know, he thought.

"When the head is set? Why not when the heart is set?" she taunted.

"Because it's the head where money is concerned, not the heart," he tossed back laughingly, and dodged the flying sofa cushion. Jane was the playmate of his childhood; he said what he pleased to her.

"Why didn't you ask it right out, 'Why am I going to marry Ashantee Ballantye?" she went on.

"Because I can never say that name without sneezing." And, after a pause: "Why is it? Because he is a handsome Hungarian and plays a harp? Or is it because you want to travel? Is it because of the old castle (covered with mortgages) and the thought of the language you can never learn? Or what?" he interrogated.

"Perhaps it is because they know how to make love. You Americans," she laughed, "talk of your ranch, your mines and how you are managing your business, while the girl dreams of moonlight nights, boat rides, the stars, and—and—love."

Ben Harmon felt his heart quiver as from a knife thrust. He remembered, too, the moonlight nights, the stars, the boat rides; and how his heart had hungered for love, but he was the one who talked of mines, the ranch, and the business. "Fool that I was," he told himself.

"Perhaps they have more practice," he jested. His only hope was in the defensive; she must never know.

"Ben Harmon! How could you hint such a thing?" Jane sobbed. Ballantye was a perfect stranger to the community and suspicions hurt.

"I didn't mean it that way," Ben apologized. "I was—just—thinking that the boy who talked business might have been thinking of love, too." His voice trembled. She looked up through her tears and his face was gray with suffering. "And if you ever need me—if you ever in trouble—send for me, for I love you, too," he choked hoarsely, and was gone.

Two weeks the preparations for the wedding went on; but somehow Jane was losing her interest in everything. Ben Harmon had never been back. It seemed so strange and unusual without him. It was the first time in her life that more than two whole days had passed without seeing him. Somehow, she had expected it would always be that way. Besides she had begun to feel the depth of his sincerity. A broken, bass voice kept repeating, "I love you, too;" and her heart kept chanting it to the Hungarian's music.

A doubt was beginning to take shape in her mind, all unknown to her, for she was always, now, comparing Ballantye's light, flowing tales of love to that humble, broken bass; and she kept feeling that the force of one was like a silent volcano; the other like a shallow, rippling stream of water.

She was beginning to realize the doubt and was a bit miserable when a furious black-eyed Hungarian woman came flourishing her fists and gesticulating unintelligibly. But Jane was very soon made to understand that one Ashantee Ballantye belonged to this woman, and that some terrible thing would happen to Jane if she was ever seen with the husband again.

She carried off the whimpering Hungarian and the harp with an Oriental flourish.

The community was shocked. Everybody sent their pity or came to console. Jane was disgusted with the notice she had attracted to herself, and when she could stand their soothing voices no longer she slipped out of the house and ran down the mining path to the little stream. Here she lay face downward in the newly painted boat—Ben's boat and her's—and cried for very misery and joy—misery for the tattling people, joy for being free.

She heard two miners approaching.

"And the last time I saw them, he was following her to the station with his harp on his back as meek as a whipped cur," one of them was telling.

"The deceitful devil! I could kill him!" Ah! that was Ben Harmon's rich voice.

They came nearer. The first man went by; Ben was coming to the boat through the willows.

She would have raised up then, but was afraid that other man might see her.

She heard Ben murmuring to himself, a way he had when he was very much vexed. He gave the boat an angry jerk and had stepped on her dress before he saw her. It was twilight.

"Hello! I nearly stepped on you, Jane Barrow! You here!" he exclaimed.

No answer but the sound of supressed sobbing.

He lifted her up, set her gently on the seat and sat down beside her. The seat was very narrow; he put his arm about her and drew her head down on his big shoulder.

"I—I—wish I knew how to comfort you, you poor, miserable, little thing," he stammered.

"I—am—not—mis-er-'ble," came back between sobs.

"Then why are you crying?" He looked bewildered. He was studying to calm her.

"Because I am happy," she laughed and nestled closer. But the laugh trailed back into the sobs and Ben was uncertain.

"If only people wouldn't talk so!" she explained. "I have been miserable ever since you went away, two weeks ago, because it is you I loved all the time." And then she told him all about it.

He lifted up her stained face and studied her tear-washed, bright truthful eyes.

"And now, if I could only learn to make love," he chuckled, and kissed her.

Cadet Benefits

In regard to the pleasures we Cadets have had from our page, words cannot express the pleasure it has been to me. I have a large number of cards from the Cadets. We have lived in the Golden State almost a year, and I am writing on Christmas day. I hardly realized that Christmas was so near, the weather has been so pleasant. We are now living in Fresno, but expect to move out on the ranch about the first of the year. Fresno is a fine city of 36,655 population. The principal rural industry is fruit growing, grapes and peaches being the principal crops, but to that alfalfa must be added. There are a great many packing houses here in which raisins, peaches and figs are packed. We have a fine climate, and most people take their outings in July or August. Some go into the mountains and some to the coast. The Sierras and the Cascades may be seen on either side of the valley. The sierras are now covered with snow, and have been for some time. We irrigate from the mountain streams and canals, all fed by melting snow. Some have pumping plants for their orange groves near the foothills. The winter gardens look fine now, and we raise all kinds of vegetables. I will be 20 years of age April 10; don't forget me on my birthday. I wish more of the Cadets could be out here to enjoy our climate. Oranges can be picked almost any time of the year. I took an outing in the Sierras last summer. It is fine sport to fish for mountain trout and rainbow trout. We were close to the Giant Forest. The huge redwood trees are a sight worth seeing. I want to hear from all the girls and boys near my age, and will answer all.—Raymond Williams, 669 Raisina street, Fresno, Cal.

A Cadet Complaint

I am now 20 years of age, and have taken UP-TO-DATE FARMING for about 18 months. I appreciate the Cadet Department but I don't think any Cadet ought to ask us to send them souvenir cards unless they intend to answer them. I have sent hundreds of cards to Cadets who said they would answer every card they received, but I only get an average of one answer to every five cards I send out. I keep a list of all persons I send cards to, and I check every one I receive, seldom sending a second card to one that fails to answer. I would like to hear from all the Cadets with Valentine cards, and will positively answer every one of them.—Charles W. Streb, Streb Bldg., Pittsburg, Pa.

CROOKED SPINES—STRAIGHTENED

CURE YOURSELF OR YOUR CHILD AT HOME, WITHOUT PAIN OR INCONVENIENCE, OF ANY SPINAL DEFORMITY WITH THE WONDERFUL SHELDON APPLIANCE.

No matter how old you are, or how long you have suffered, or what kind of spinal deformity you have, there is a cure for you by means of the wonderful Sheldon Appliance. It is as firm as steel and yet elastic at the right places. It gives an even, perfect support to the weakened or deformed spine. It is as easy to take off or put on as a coat, causes no inconvenience, and does not chafe or irritate. No one can notice you are wearing it.

CURE YOURSELF AT HOME

The Sheldon Appliance is made to order to fit each individual perfectly. It weighs ounces, where other supports weigh pounds. The price is within the reach of all. Hundreds of doctors recommend it.

We Guarantee Satisfaction and Let You Use It 30 Days

If you or your child are suffering from any spinal trouble, hunchback, or crooked spine, write at once for new book with full information and references. We have strong testimonials from every State in the Union.

What is Now the Fashion

Up-to-Date Patterns

All Patterns 10 cents each, post paid

5939—CHILDREN'S DRESS—A clever little dress that requires little time to construct is given in this model. The frock closes at the back and can be finished with long or short sleeves. A pretty effect is given by making the revers and band cuffs of contrasting fabric.

The pattern, 5939, is cut in sizes 3, 5 and 7 years. Medium size will require 2⅜ yards of 36-inch contrasting material with ¼ of a yard of 27-inch contrasting goods.

5837—LADIES' EMPIRE DRESS—Here is one of the most stylish models of the season. The dress has the fashionable front closing. The waist is made with removable chemisette and the skirt is cut in five gores. The collar and revers add charm to the garment and the pointed turned up cuffs are a pretty feature.

The pattern, 5837, is cut in sizes 32 to 42 inches bust measure. Medium size requires 6⅛ yards of 36-inch material, ⅝ of a yard of 22-inch all-over, and ⅝ of a yard of 24-inch satin or contrasting goods.

5991—GIRLS' DRESS—Here is a dainty little frock for the small girl, and one quite easy to make. The garment closes at the right side of the front and has removable shield. The skirt is a three-piece one. There is a pretty sailor collar. The cuffs are edged with contrasting material and the dress is further trimmed with buttons.

The pattern, 5991, is cut in sizes 6 to 12 years. Medium size will require 3 3-4 yards of 27-inch material of 3 yards of 36-inch fabric.

5967—LADIES' DRESS—This dress can be used for morning or afternoon wear. It can be made with either the high or low neck. It closes at the left side of the front, and the skirt is a four-gored model.

The pattern, 5967, is cut in sizes 32 to 42 inches bust measure. Medium size will require 6¼ yards of 36-inch material, with ½ of a yard of 27-inch contrasting goods.

5995—LADIES' SHIRTWAIST—This is splendid type of a tailored shirtwaist and is just the thing for general wear with the coat suit. It is made with or without the boc plaits, can have either long or short sleeves and either a standing or rolling collar.

The pattern, 5995, is cut in sizes 32 to 42 inches bust measure. Medium size requires 3½ yards of 27-inch material.

6007—LADIES' DRESS. This dress is made with the stylish sailor collar and turn back cuffs. It closes at the front and is made with long or short sleeves. The skirt is a five-gored model.

Serge or cheviot can be used to make this dress.

The pattern, 6007, is cut in sizes 32 to 42 inches bust measure. Medium size requires 6⅛ yards of 36-inch material with ⅝ of a yard of 24-inch contrasting goods.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. All you have to do is to give number and the size you want and write your name and address plainly. Address Pattern Desk,

UP-TO-DATE FARMING, Indianapolis, Ind.

Happy People

The flowers are dead in the fields and hollows,
The hills are brown and the brooklets froze,
The leaves are scattered while the winds are blowing,
And outdoor life is in repose.
But in the home there are cheerful moments,
And love and gladness dwell in state,
For while the storms are fiercely roaring,
The folks within read UP-TO-DATE.

SHOWING THE CHILDREN OFF

PARENTS love their children, are generally proud of them, and too often delight in showing them off. In this the parents make mistakes. Young children are sensitive, and nothing is more embarrassing to a modest child than to make it feel that it is on exhibition—singing songs to entertain a special visitor, saying "speeches," or doing other things purely to show out. Introducing a child to a stranger don't make any remark that brings the child into a strong personal light. A well bred child is glad to meet strangers, especially if those strangers are its parents' friends, and it will take delight in showing them things it has, things that will reflect honor on its parents rather than itself—books that interest it, pictures that it admires, or even toys that it likes; but nothing is more distressing to it than to feel that it itself is the thing on exhibition. Give it that impression, and that child at once ceases to be itself, turns away in embarrassment, and is inclined to retire. Its little face shows clearly the conflict in its mind between the desire to comply with the wishes of its parent and its aversion to making a show of itself.

And even a worse evil may follow this practice. If it is persisted in until the child loses its instinctive modesty, there may grow up within it an egotism so repulsive in many people throughout their entire lives.

IT IS MOTHER

YOUNG people, what do you think of your mother? You love her, of course; but do you ever tell her so? As life passes we so often let it pass as a matter of course, today being like yesterday, and yesterday like the day that is to follow. But some time there may come a day that will be very different from any others.. Then a backward view of the days that are past will show many chances you had to make mother happy that you did not at the time avail yourselves of, and a sting will accompany the knowledge that the opportunity is forever gone.

The young man does not know how the mother-heart appreciates the loving smile of a grown son, a kind, pleasant and cheerful word, or even an occasional embrace accompanied by an affectionate kiss. A boy should never get too old to kiss his mother. These little attentions and kindly courtesies of life that smooth down so many of its asperities and make the journey less wearisome, cost nothing, but they are worth more to the mother than gold or gems. Boys, love your mother, and don't be ashamed to tell her so, or even to let the world know it. Anticipate her wants, prove to her that she has your confidence, be prompt to offer assistance, and express your affection freely as you did when a child, so that she may never have occasion to grieve for the little one that used to play around her knee, but that she may seem to have lost. And, girls, the same kindly advice is for you. also.

DOING OUR BEST

PEOPLE sometimes feel like they have failed, and almost justify themselves in giving up the struggle. These thoughts are apt to come after the New Year festivities are over. Do not be discouraged. There are opportunities yet and the beacon star which leads to success is to do our best. A writer in one of our exchanges puts the idea in beautiful verse:

If I have tried to do my best,
And fail for lack of strength or skill,
If I have brought unto the test
All that I have of worth and will,
And then go down unto defeat—
I need not fear God's judgment when
I kneel before His mercy seat;
For that is all he asks of men,

God does not say that we must win,
Nor are the souls of failure lost;
The weakest of us shall get in,
If, when our barks were tempest-tossed,
We tried to steer our course aright,
And gave our best to every task;
An honest effort in the fight
Is all that God himself will ask.

And so I say, if I have tried
To do my best, I need not fear
When that dark veil is torn aside,
And I behold Death's angel near;
If I have lived up to the right
As I could see it, all is well;
Although on earth I lost the fight,
I'll have a place in heaven to dwell.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

WE ARE now well started in on the New Year. The Cadets of Equity begin it as one of the greatest bodies of this kind in the world. Letters declaring its pleasures and personal benefits are coming in, and we are printing some of them for others to read. Our plans for UP-TO-DATE FARMING exceed those of any other year, and in this the Cadets have their greatest opportunity to help us. Every new subscriber and renewal is a link in the chain of our success. How many of these links will the Cadets add to that chain? We are satisfied the Cadets are good subscriber getters and club raisers. We are waiting for the proof, and we turn to the letters for this issue with high hope.

DEAR CADETS: Here comes a girl from the old Hawkeye state, who would like to join you and become a Cadet of Equity. I am a farmer's daughter of 18 years, and live on a farm of 160 acres, 6 miles from Osceola, the county seat of Clarke county. My father takes UP-TO-DATE FARMING, and thinks it the best farm paper he has ever taken at the price. I greatly enjoy farm life, and I would like to hear from some of the Cadet boys and girls, especially those of my age and who have my name. Now, boys, please don't run.—Lillie D. Lovell, Woodburn, Iowa.

DEAR CADETS: I, too, would like to join you and become a Cadet of Equity. My father takes UP-TO-DATE FARMING, and I love to read the Cadet letters, and I love the farm very much. I am 17 years old, and am going to school now. I would like to exchange letters and cards with the Cadet boys and girls.—Lillian Marshall, Williamsville, Va.

DEAR CADETS: Here comes a girl from the northeastern part of the Blue Grass state, where my father owns a farm of 200 acres. I am 16 years old, and have always lived on a farm. We raise corn, tobacco, oats and hay. Kentucky produces one-third of the tobacco grown in the United States. I would highly appreciate cards and letters from all the Cadets.—Mollie Colgan, Wallingford, Ky.

DEAR CADETS: Here I come from the Lone Star State. I live on the edge of the West Texas plains, have lived here all my life, and I don't think I could like any other place. Our principal crops are corn and cotton. The Farmers Society of Equity and the Farmers Union of Texas are almost the same. We have been taking UP-TO-DATE for nearly a year, and think it a fine farm paper. I am 17 years old, and would like to have a card or letter party any time—would like to hear from every one of the Cadets—Reba Atkins, Nocona, Tex.

DEAR CADETS: I am a farmer boy, 18 years old, and live on a 1,250-acre ranch by the Pacific ocean. Our house is very close to the beach. It is a very nice place, and thousands of people come here during the summer months from all parts of the world. There is a large bay here, and it is noted for its still water, bathing and fishing. We raise barley and beans on the ranch. Would like to exchange letters or cards with the Cadets.—Arthur Townley, Balboa Beach, Cal.

DEAR CADETS: Will you permit another Iowa girl to join you I am a farmer's daughter of 16 years. We take UP-TO-DATE FARMING and like it very much. I like to read the Cadet letters, and would be glad to exchange cards or letters with the writers.—Hulda Trapp, West Union, Iowa.

DEAR CADETS: I live on a farm of 320 acres, and I believe country life far superior to city life. My father has taken Up-to-Date for a great many years, and thinks it an ideal farm paper. I enjoy reading the letters from the Cadets, and learn some interesting things from them. I am in first year high school, taking English history, English, Latin, algebra and physical geography. I would like to exchange cards and letters, and would like a shower January 26, when I will be 16.—Lois Clawson, Clay City, Ill.

DEAR CADETS: I live on a farm of 325 acres, and farm and trap. I trap on a large ranch near here. We have several kinds of fur bearing animals. We have had four years of dry weather, and haven't raised anything. Our crops are cotton, corn, maize, cane, oats and wheat. A great many cattle are raised here, and some horses. I am 17 years old, and live near Pyron, a small West Texas town. Would be glad to hear from the Cadet girls and boys—will answer all.—Clyde Gilmore, Pyron, Tex.

DEAR CADETS: I have been a reader of UP-TO-DATE for nearly a year, and think it is a fine paper. I have enjoyed reading the Cadet page specially. I live on a farm of 80 acres, about 3 miles from the post office. I am the oldest boy in a family of 8, and have lived on the farm more than 10 years, and think it is more pleasant than city life. There are many lakes, with plenty of fish in them, and we live right near one. I am very fond of fishing and hunting. Lumbering has been the chief occupation during the winter, and there is quite a bit of timber yet. I would be pleased to exchange cards and letters with the Cadet boys and girls near my age, which is 20 years.—Victor R. Peterson, Tamarack, Minn.

DEAR CADETS: Though only 11 years old, I am a subscriber for UP-TO-DATE FARMING, and like it very much. We live on a farm of 160 acres, and have 30 cows, 13 calves, 21 pigs and about 100 chickens. I like farming very much, and our winters are not so very cold; there is no snow here. We have (December 16) a very nice garden planted with onions, radishes, spinach, turnips, lettuce and carrots, and we have a nice flower bed with roses, poppies and sweet peas. I would like to exchange letters and cards with the Cadet boys and girls, and will answer all I get.—Katherina Pelger, Imperial, Cal.

DEAR CADETS: I live in the country, though not on a farm. We raise White Orpington chickens and high class pointer bird dogs. I drive 3 miles to school, and am a sophomore in high school. I will soon be 15 years of age. I have been reading the Cadet letters, and enjoy them very much. I will be glad to receive cards and letters from all the Cadet girls and boys, and will answer all I receive.—Mary E. Leech, Connersville, Ind.

DEAR CADETS: I am a farmer's daughter, and will be 14 February 26. We take UP-TO-DATE FARMING, and all think it a very fine paper. We live on a large farm of about 1,200 acres. We raised large crops this year. Our nearest town is about 15 miles away. We have lots of horses, mules, hogs, cattle and chickens. I go to school about 2 miles from home. My oldest brother, who is 16, owns a very fine automobile, the best that is made. I would like to exchange cards and letters with any of the Cadets, and will answer all I receive.—Tillie Brown, Pearl, Neb.

DEAR CADETS: We take UP-TO-DATE FARMING, and think it is a dandy paper. I live in a town of about 900 inhabitants, am 17 years old, and will graduate from high school next spring. I would like to exchange letters or cards with any of the Cadet boys and girls, and will answer all.—Mrytle Dickinson, Benton, Wisconsin.

DEAR CADETS: I would like to join you and become a Cadet of Equity. I will be 18 years old March 18, and I think a card shower would be nice. I live in a beautiful country home with my parents and one brother. I would be pleased to hear from some of the Cadets.—Maude Crawshaw, Carbondale, Ill.

Dear Cadets: I live on a farm of 163 acres in Grant Parish; am 18 years old, and was raised on a farm and like it very much. I have all kinds of outdoor sports. I will answer all cards and letters.—H. H. Holston, Morris, La.

DEAR CADETS: Will you allow a Missouri boy of 20 to join your circle? I take UP-TO-DATE FARMING, and got so interested in it that I thought I would love to join your jolly old band. I haven't taken the paper but a short time, but I think it fine. I live on a farm of 40 acres, and I enjoy farm life much better than city life. Like many others, I am always anxious to receive my paper, for I think the Cadet page is just great. I would be more than glad to receive cards, letters and photos from all the Cadets.—Brad Stark, Hartshorn, Mo.

DEAR CADETS: My friend takes UP-TO-DATE FARMING, and I have been reading it for several months, and think it the best farm paper ever printed, and one that every farmer should read. I am nearly 15 and live with my father and mother on a farm of 300 acres, and have all kinds of stock. My brother and I would like to correspond with the Cadet boys and girls.—Lula and Fletcher McGee, Springfield, Ore.

DEAR CADETS: We take UP-TO-DATE FARMING and we think it is a grand paper. I live on a farm, and we raise alfalfa and fruit. I would like to exchange letters and cards with some of the Cadets. I will answer all I receive if it takes a month.—C. M. Dockray, Hagerman, N. M.

DEAR CADETS: I am a young man of 19 years, and live in the city of Athens, Ga. Our main product is cotton. Would like very much to exchange cards with any young lady who desires to do so.—Ben. B. Davis, Athens, Ga.

DEAR CADETS: I am a jolly farmer, 25 years old, but unmarried. I live on a 100-acre farm. We have a fine country here, cotton, corn and oats being our main crops, but we can raise almost anything we plant. I am a reader of UP-TO-DATE, and think it a fine paper. I sure enjoy the Cadet page, and decided I would become a Cadet. I will answer all letters and cards with pleasure.—H. C. Price, Wartham, Tex.

DEAR CADETS: Here comes another Texas boy trying to get in this race with you. I am a farmer myself, and think farm life the best of all. I have been taking UP-TO-DATE about a year, and have got it coming three years yet. I think it is the best paper I ever saw for the farmer, and would not be without it at all. I will be 30 years old January 23, 1913, and would like to receive cards or letters from all the Cadet girls and boys, and will answer all I receive.—Floyd Davis, Dodge, Tex.

Violin Free

This is a fine, handsome, clear toned, good sized Violin of highly polished, beautiful wood with ebony finished pegs, finger board and tail piece, one silver string, three gut strings, long bow of white horsehair, box of resin and *Fine Self-Instruction Book.*

Send us your name and address for 24 packages of *Bluine* to sell at 10 cents a package. When sold return our $2.40 and we will send you this beautiful Violin and outfit just exactly as represented.

BLUINE MFG. CO. 589 Mill Street Concord Junction, Mass.

Raw Fur Shipper

A postal will bring you a trustworthy price list. Issued from November to March. Avoid shipping to commission houses and extremely high quoters. Thirty years experience with best of references, personal assortment and cash for all shipments ought to be sufficient. All shipments held separate on request. A trial will convince you.

LEMUEL BLACK, Exporter Raw Furs, Hightstown, N. J.

Skunks and all Other Furs

We want them. If you have never written to us for a price list do so at once, and be kept posted throughout the season. We want furs from the Eastern states and Canada only.

CHARLES A. KAUNE 274 Bridge Street Montgomery New York

Trade Mark

TRAPPERS LOOK HERE, did you ever see a fairer proposition; ship me your furs, put your own valuation on them and if I can not pay that much or more, I will return furs and pay all express both ways, or you can ship to me and just say, "hold separate," and I will submit my best offer, and if not satisfactory will return, as above stated. Write today for price list and tags, which are now ready and free for the asking; a postal card will do. JONAS D. EMERY Concordia, Kas.

A Personal Message

To All Who Desire a Better Method of Price and Marketing

It is said: "Opportunity knocks but once at every man's door."

—o—

We do not agree with this entirely, but we believe it knocks harder one time than any other time.

—o—

We believe opportunity has knocked many times at farmers' doors and they were not opened because the inmates were sleeping so soundly that they did not hear the alarm.

—o—

But opportunity is knocking hard and loud today at every farmer's door. It is the opportunity to become free and independent business men. Even though we live on the farms, the same opportunity that knocked at so many doors of manufacturers and merchants and carriers, and was admitted and entertained and has abided with them ever since, is knocking now, this very day, at the doors of farmers.

—o—

It is the Golden Opportunity to organize the Farmers Society of Equity and give to agriculture the business system it has needed for a generation.

—o—

We are confronted by graver problems today than ever before, but opportunity is knocking louder than ever before, so if we will swing open the doors and admit it we can solve the problems through united effort, not by individual effort.

—o—

The writer made a trip to Kansas since our last issue. The occasion was the annual meeting of farmers at the State Agricultural College. The matter of marketing was more prominent in this meeting than I ever knew it to be in a similar meeting. Truly, as far as Kansas is concerned, the head educational institution at last appreciates the necessity of a balanced education for farmers.

—o—

And education is not all. The Kansas agricultural college officers say the Kansas farmers must organize in local bodies and get ready for a broad, comprehensive marketing scheme which the college expects to announce soon. There was no doubt about the necessity of the community unit of co-operation, just as we have taught, and resolutions were passed urging farmers all over Kansas to organize NOW and get in a condition to take the next step.

—o—

THIS IS THE KANSAS FARMERS' OPPORTUNITY. They must understand that it is no longer UP-TO-DATE FARMING crying, as one man in the wilderness to save ourselves. The Kansas State Agricultural College through its president, Mr. Watters, and through its other officers call to the farmers of Kansas to save themselves from their exploiters through organization and co-operation.

—o—

ORGANIZE. Write to us and we'll tell you how, or write to Prof. J. H. Miller, dean of College Extension, care State College, Manhattan, Kas. This call is to every farmer in every community in Kansas, but it is to ONE MAN IN PARTICULAR who will take the lead to bring his neighbors into the local organization. We want this man to fill out the blank below and send it at once.

Also, when on the trip to Kansas I stopped in St. Louis for conferences with some railroad officials. I found the "Frisco" railroad system has the matter of organizing local associations of producers at all its stations in conference now and it hopes to make an announcement soon. I found the "Southern" railway system had gone much farther.

—o—

For instance, the president of this system has appointed four market agents, one each in St. Louis, Atlanta, Cincinnati, and Washington. The duty of these agents, quoting from the president, is as follows:

To devote all their time to collecting and giving information as to markets, methods of packing, shipping etc., to producers who may seek their co-operation in the territory traversed by the lines of the Southern railway system.

—o—

In conversation with Mr. E. L. Robinson, the St. Louis agent, with his office in the Fullerton building, he said they would want to maintain the closest kind of relations with the Farmers Society of Equity and that they would aid our society in every way possible to bring the Southern states into an organized condition to prevent a recurrence of the disastrous marketing experience of 1912.

—o—

Any southern producer who cannot see the opportunity presented to him, through the co-operation of such a powerful ally is not only blind to his interests, but is a dead one. I will say further that it is not the thought of the railroad company to co-operate with the small individual producer, but one of the essentials is organization, so directing of marketing can be done for large quantities and shipments be made in carload lots.

—o—

So the call to all the people of the Southern states is to organize and federate and get into a condition to avail themselves of the good intentions of this company. And we predict that other railroad companies will volunteer to help the producers, along their lines, to market.

—o—

We have been writing to railroad officers for months that it was as legitimate railroad business to help farmers to market, as it was to run Gospel of Production trains to teach them how to produce. We naturally are glad that we now have a common view of the matter. We feel that farmers and their organization should welcome all of these efforts to teach the long-neglected side of agriculture—the marketing side. We know what an uphill job we had when we were all alone, as this paper and the Farmers Society of Equity were for years.

—o—

So we congratulate the people and the institutions and the producers of crops and ourselves on the turn of events. We are sure, with all the help to educate and the actual co-operation in the work of marketing that is volunteered now, that it will be only a short time when agriculture will have a marketing system of its own, as every other productive industry has.

—o—

But farmers must be very careful. This is the time to exercise wisdom. It is easy to go off on a side track to explore attractive looking regions. It requires steadfastness of purpose to go straight ahead. Therefore we caution farmers to know they are right. The organization that is being built now must be a sound one, or it will only be an aggravation and perhaps in ten or twenty years another one must be built. Its BUSINESS SYSTEM must be practical and such as will make agriculture as certain and definite for profits as the best systematized and regulated business in the country.

—o—

The point is this: Farmers produce things in all parts of the country that are wanted, part in the places where produced and parts in every other little nook or corner of the country. Then the problem is to know where all this farm produce, of every kind, is and how much it is, and to know where all the demand is and how much it is, and the system must be such as will send every bit of the supply by the shortest and cheapest route to every bit of the demand.

—o—

This is the organization and the system that agriculture needs. Is it possible to have such an organization and such a system in which all the agricultural colleges, all the railroad companies and every man, company and institution that honestly wants to help farmers solve their marketing problems can join, and with which they can all co-operate?

—o—

Yes!

—o—

It is said that the International Harvester Company paid $25,000,000 for a plan for a sound organization and a successful system of marketing its machines to protect it in its business and profits. We are not sure about the amount paid, but everybody knows that the old time competition is past and its business is definite and profitable since the organization was effected. Whatever the price paid for the plan it was worth it.

—o—

But farmers are not asked to pay for a plan. The plan is prepared for them, and all they need to do is to accept it and USE IT. Any community can get the plan that is suited to farm co-operation and marketing by filling out and sending the blank on this page.

—o—

One or more readers of this paper in each community is now asked to help by sending the blank below properly filled out. We seek the names of representative farmers who are dissatisfied with the present system of marketing and who want a change. Please indicate in the proper places the people you recommend for president and secretary (or business agent) and local organizer. The selection of officers must be left to the meeting to organize, but your recommendations will help us very much in our efforts to organize your community.

—o—

Brother farmers, prompt action counts at a time like this, in a cause like ours. With prompt and determined action by comparatively few people the Farmers Society of Equity will sweep the country, wipe out the old system and end all of its iniquities, establish the system of Equity and proclaim the greatest victory the industrial world ever saw.

The Farmers Society of Equity

Is a farmers' organization, incorporated, headquarters, Indianapolis, Ind. Its first and greatest object is *"To obtain Profitable Prices for all the Products of the Farm, Orchard and Garden.*

National Officers and Directors

Pres., J. A. Everitt, Indianapolis; V.-Pres, W. H. Mitchell, Hutchinson, Kas.; Treas., National City Bank, Indianapolis; Sec., M. K. Sleight, Indianapolis; National Organizer, James E. Baxter, Fort Plains, N. Y., or Indianapolis. Directors, C. W. Peckham, Haven, Kas.; S. W. Wilber, Worcester, N. Y.; Tom Bolt, Muskegon, Mich.; Robert Stevenson, Lebanon, Ind.; Guy Robertson, Gresham, Ore.; Jacob Bretz, Bretzville, Ind., S. W. Morris, Rochester, Minn., and the President and Vice-President.

The Membership

consists of farmers and is limited to farmers and co-workers with farmers. The wives of members and their minor sons and daughters may become *special members.* The terms of membership are fully set forth in the Constitution and By-Laws.

— — — — — — — — THIS IS THE BLANK — — — — — — — —

FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them would be glad for improvements in our system of marketing.

These people market mainly at the town or city of.....

(As the F. S. E. is a business organization local unions are organized only at the places where the marketing is done.)

This list was sent by .....P. O. ..... State.....

Dear Reader:— Listen to Me!

BELIEVE every word I say, if you will, it will be the most profitable five minutes of your life. I can put you in the soap business, where you can easily make $150.00 per month. Any bright man or woman can make more money working for me than in any other way. I have hundreds of agents making $2,000.00 per year. I have always been in the agency business myself and know the business from A to Z. I teach you how to make sales and make you successful. I have made over One Hundred Thousand Dollars selling Washing Machines and many of my old agents have made their pile and retired.

I now have a much better proposition to offer you—one that makes my agents more money, and I like the business better myself. The reason my agents have been so successful is the fact that I do not handle junk, tinware or cheap John goods of any kind that never lead to repeat orders. I give no premiums, but my agents get hard cash for their work and soon have money in the bank. It's repeat orders that make money in any business. Go into any home next Monday morning—you'll find them washing; go to their neighbors, they are washing too—in fact, it's the same thing all over the country. The demand for soap is unlimited and repeat orders never cease. Now, what does this all mean? It means someone is getting the enormous steady profit from your territory, which can be yours.

There is big money in the soap business. I give my agents the big end of the profit—a profit so large that I hesitate to state in this public manner what it is, but will be glad to advise you confidentially when you write me. Suffice it to say for the present that you will be satisfied. I give you a chance to make such a big profit that you'll be more than satisfied with your income and willing to stay with me year after year and be one of my loyal representatives. I personally teach every agent how to make money and make it fast. My plan has been a great success and I'll give it to you FREE. Now, I want to say to every man or woman who is anxious to make money and better their condition, write me. Don't lose a moment's time, but write me at once and address your letter to **W. W. TERRIFF,** *President of The Wolverine Soap Co.*, 147 Water St., **Portland, Michigan.**

Your Seed Grain CLEANED and GRADED FREE

To prove my "Chatham," I will ship it freight prepaid, no money down. Let it clean, grade and separate your Seed Grain for 30 days. Then keep it and pay me my astonishingly low price next November or send it back, at my expense.

ANNUAL MEETING OF THE Oklahoma State Union

will be held in Shawnee, Pottawattomie county, beginning on Tuesday, January 28, 1913. Every local and county union in the state should be represented by delegate. Those who have not yet selected delegates should call a special meeting at once for that purpose. The state union secretary should be notified at once of the selection of delegates, and furnished with their names and addresses. It is desired to make this the most effective business meeting for farmers ever held in this state. New officers of the state union for 1913 are to be elected.—J. A. Harman, State Union Secretary, Shawnee, Okla.

Farm Extension Advice as Seen by a New York Farmer

EDITOR, UP-TO-DATE FARMING:

I have read your comments on the International Harvester Company's announcement. The articles you are writing are wonders, and they are doing a world of good on the question of market reform. Farmers in the east as well as in the west feel that they owe you a debt of gratitude.

The I. H. C. say they "see the time coming when farmers will raise twice as many bushels of corn, wheat and oats to the acre, and like yields of all other farm crops." But the farmers of this country will never double their production till they themselves can see and know where and how they can market the increased crops at a profit. No manufacturer would double the output of his factory unless he knew he could sell the increase at a profit. If the farmers should form a service bureau and announce to the I. H. C. that if they, the manufacturers, desire to be prosperous, they must double the production of their factories, make two mowing machines where they make but one now, make two implements of every kind where they make but one now, would the I. H. C. take the advice, and hail these liberal farmers as their greatest benefactors?

On the contrary, they would say to the farmers: "We have studied how much machinery we can sell at our price, and it would be folly, suicide, for us to make more than that. After all, you would better go back to your farms, get the hayseed out of your hair, and study the financial end of your business as well as the production part only."

They might further say, if brought to tell the truth, that the reason why farming is such a financial struggle is that farmers have grown two bushels where only one was needed, and have sold the two bushels for little more than they should have had for one; that the reason farmers never make or control prices is that they produce more than is needed, more than the demand requires, and must, therefore, sell for any price that is offered by the middlemen or others; that farmers would better not double or even increase their crops until the present system of marketing crops is changed, and we have instead a plan of distribution that will find the demand and supply it, thus increasing consumption.

But the I. H. C. is not giving that kind of advice. It says: "Every bushel raised means just that much profit, and the profits of the farm promote commerce and industry." Again: "Were every acre of ground in America made to produce all that it is capable of producing the wealth of America would be more than doubled." But under the present system of marketing the farmer's wealth would not be doubled nor his income increased. Suppose we should say: "Were every manufacturing concern in America made to produce all that it is capable of producing, the wealth of America would be more than doubled," would the I. H. C. accept and act upon the advice? The question of double production of farm crops making double farm incomes, no matter whence the declaration comes, should be thoroughly discussed and carefully considered before it is accepted by farmers. In fact, farmers are doing some rational and intelligent thinking, and they will act on their own conclusions and judgment. The battlecry should be market reform rather than double production.—A. J. Woodin, Pawling, N. Y.

CARTOONS OR FARM SCENES

OUR readers are responding to the question as to which is best for the first page of UP-TO-DATE FARMING, a cartoon or a protographed farm scene:

Lucy Lee, Magazine, Ark.—The cartoons are my choice; they are very instructive. Most every picture brings out everything so plain that one can't help but see the meaning of it. They show what is going on all the time. How can any farmer look at one that recently appeared and not get an idea of how he is losing on his farm products?

Harland D. Box, Gravity, Pa.—Cartoons are very good as they serve to open the farmers' eyes to the fact that they are skinned of their profits, but that they can save themselves by getting their heads together as the mules did in a recent issue. Yet the farm scenes are pleasing to the whole family. Might sometimes use one and sometimes the other.

Mrs. Viola Neidigh, Sumner, Ill.—I prefer the cartoon on the front page of UP-TO-DATE, because it makes one have a deeper thought of selling the produce from the farm, and also of what the speculators are doing. It also gives one an idea of what is to be learned from reading the paper.

Mrs. E. M. Stowell, Grand Valley, Col.—We prefer the cartoons for the first page because they "hit the nail on the head." It is more interesting to the farmer than any scene, for he is compelled, involuntarily, to be interested in a paper whose first page shows it is for more profitable marketing.

Miss Mamie Evans, Danville, Va.—I prefer the cartoons because they explain so much to the farmers, and the pictures make them take more notice than they would otherwise do. Farmers need something to make them wake up and take notice how they are being swindled out of their profits.

Miss Hulda McHenry, Indiana, Pa.—I think the cartoons are best because they show more about the way farming ought to be done and who gets the profits. The farmer is the person who ought to have them, but he fails. If the farmers were organized it would not be so hard for them to set reasonable prices, but now they have to take what the dealers please to give them. I only hope I may see the day when they are organized. I love to read your paper.

F. J. Knemeyer, Windsor, Col.—I prefer cartoons to farm scenes because they are live topics of the day. The cartoons you have been running in recent issues have been exceedingly fine, and each one expresses a great deal. These cartoons, if rightly studied, bring more to the mind of the reader than a whole paper of printed articles.

Paul Yauch, Stockwell, Ind.—I prefer cartoons for the first page. The reason is that they help to explain and teach the way things are really going. Scene pictures would not do us so much good as the cartoons do.

John Hodell, East Liverpool, O.—I prefer to see good, live cartoons on the first page of UP-TO-DATE FARMING, such as have been running. I prefer them because they depict farming conditions in our country, and bring them more clearly to the mind than columns of reading matter. Every cartoon tells a story of great value to the farmer, and so fixes it in his mind that he can't forget it. However, I believe a photograph used occasionally would be appreciated, for no doubt there are readers who are not actively engaged in farming, to whom good farm scenes would appeal.

Herman Johnson, Bismarck, N. D.—I would prefer for the first page of UP-TO-DATE FARMING, photographs of farm scenes, farm homes and buildings, trees, pictures of cattle and horses, and whatever pertains to the farm. My reason for this is, that, as a farm paper, it would be more appropriate to have farm scenes than the cartoons.

Comparatively few farmers make the most out of their poultry. There should be a Poultry Department on every farm. And the good wife makes the best manager! One requisite is a good, reliable incubator. Write for a catalog of the Queen Incubator and it will help to start you right. Address P. M. Wickstrum, President, Box. 19, Lincoln, Neb., for your free copy.

Something decidedly new and valuable in incubators is the machine that needs only one filling of oil for the hatch. No danger of running out of oil and having the machine cold. Lots of other good reasons why you should have a Rayo Incubator. Write for free hatching information to Rayo Incubator Co., 792 S. 13th St., Omaha, Neb.

Send in Your Own Name Today

for this big brass-bound telescope; 3½ feet long when opened, 12 inches long when closed. If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects like they were close--write today. Enjoy miles away just it day and night. Needed on every farm. 5 to 10-mile sight range. I have thousands of reports from my delighted friends who have sent for a telescope. I want to advertise our business and not one cent of your money is required. Send your name only for my big free telescope offer. Do this today. Geo. D. Allerton, Desk 209 227 W. Wash St., Indianapolis, Ind.

TRUSS WEARERS

FREE attention: The PLAPAO-PADS are different from the truss, being medicine applicators made self-adhesive purposely to hold the parts securely in place. No straps, buckles or springs—cannot slip, so cannot chafe or compress against the pubic bone. Thousands have successfully treated themselves at home without hindrance from work and conquered the most obstinate cases. Soft as velvet—easy to apply—inexpensive. Awarded Gold Medal. Process of recovery is natural, so no further use for truss. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TO-DAY.

TRIAL OF PLAPAO

Address, PLAPAO LABORATORIES, Block 59, St. Louis, Mo.

Every Farmer Can have a copy of this New Book Free

What is This Book?

It was written in the latter months of 1912. It was written at a time when there was more farm produce in the country than there ever was before in the history of agriculture in America. Also at a time when the products of the farm were relatively cheaper (at the farm) than ever before.

It was written with the view of exposing the folly of unbalanced farming, the weakness of the present-day system of distributing the products of the farm, the exploiters of both the producers and consumers of farm crops and to supply an ever-present need for a work setting forth the full plan to solve farmers' marketing problems.

And the problems treated in the work are not solely farm problems, but they are problems that concern every individual and every industry in the United States. They are nation-wide problems, therefore the book has an interest for all the people.

This Book Ought to be Read by Every Farmer

Its theme is, "Money, and Not Altogether Large Crops, is the Measure of Successful Farming." It is one of the most valuable books ever written, but its value depends entirely on its circulation. Secure a copy for yourself and two copies for neighbors. Kindly help us to run an "endless chain" that will eventually reach every farm home.

This is Our Offer

On receipt of your subscription or renewal to UP-TO-DATE FARMING, accompanied by the subscription price, 50 cents, and the coupon below, we will send you a copy of "The Crop-Rich Money-Poor Farmer" and a copy to each of two of your friends whose addresses you furnish us. A year's subscription and three copies for 50 cents.

The Traveler

Under this head appears accounts of what our "Traveler" sees, hears and otherwise discovers. He can not, unfortunately, visit every section and locality, and those whom he can not see he most earnestly desires to hear from occasionally. This applies to every reader of this paper who is interested in the plans of the Farmers Society of Equity. Write to "The Traveler." Write today and address your correspondence to

"THE TRAVELER'S DESK"
CARE THE FARMERS SOCIETY OF EQUITY
INDIANAPOLIS, IND.

THE IDAHO SITUATION

WE HAVE four men in Idaho who will soon make that state the greatest Equity stronghold in America despite the valiant efforts of Harmon and Helphrey, in Oklahoma, Shure and Foster in Alabama, Cutting and Lyman in Oregon, Stauffer and Tobleske in Florida, Chamberlain and Forringer in Pennsylvania, all of whom are laying plans to do great things, and who have indeed done well. But Idaho, where they grow nearly everything but cotton, corn and tropical fruits, is making astounding strides.

District Organizer R. A. Southworth, a man who is approaching the shore line of three-score-and-ten, is first in point of results. Every week he sends to headquarters a list of new locals. They are having hard weather out there, too—14 degrees below zero, yet the farmers flock to the meetings and line up shoulder to shoulder. It is inspiring. Oh, you farmers could have everything your own way if you only would! And it looks now as though you will. Mr. Southworth is putting local organizers at work in each locality he visits. Here are some extracts from one of his reports:

I am practically blind, and need a pilot, but I never fail to get a local. If I ever do, it will be because not enough attend to form one.

Home last night after a 20-mile ride with the mercury 14 degrees below. On Monday I organized at lower Rudy, in Fremont county. Good attendance, much interest, and good promise of growth and work. On Wednesday I was at Shelton, in Bonneville county. The meeting was held in the church. Close attention, and many questions asked. On asking those present who favored joining the F. S. E. to stand, all old enough to join arose. Officers were elected. Those joining were unanimous in agreeing that all in that precinct must become brothers in Equity. Thursday I was at Poplar, in the same county. Cold weather did not keep them away. The talk brought the house and Poplar local was born into the Equity brotherhood. Friday night in a blinding snow storm fourteen men appeared at the L. D. S. church, when I expected Brother Jorgensen and myself would be the only ones there. "Not a guilty man escaped." Saturday at 2 p. m. at Ucon a few were out in spite of the intense cold. Nearly all names were appended to the charter application. These people are all earnest workers, and believe this work is fit to be done in their churches. Brother Jorgensen, a member of the Rudy local went with me to each place, and I laughingly told the audience that he thought so much of Equity he insisted on joining each local in the county. He was of great assistance to me in my work and is still making dates.

Many a worthy man who has good crops of grain, hay and potatoes must move out, because they cannot connect these crops with sufficient cash to keep them. Those who are out of debt can pull through, but the others can not pay interest on their indebtedness.

Men, what are you going to do about a situation like this? You may not be in as bad a hole as these Idaho brethren, but that is no credit to you. Moreover, you know not when those who control the making of the prices on your products can give you the same bitter pill and force you to take it. That is no credit to you, either.

Possibly you get something for what you have to sell, but the speculators get more than you do, which is still less to your credit, especially when you could so easily get what belongs to you. These Idaho brethren could ship to distant markets, but as soon as their crops get under control of the speculative system, they can say goodbye to profit. We are going to do our best for our members out there, but what about the poor fellows we can't reach?

I tell you, boys, this condition of affairs is all wrong. There's rottenness and rascality in it. And the ones who are responsible have no idea of changing it, not a bit in the world. There's only one way to do it. The regular readers of this paper know what that way is. Organize, men, organize. Come into one great brotherhood. Get together. Build your own marketing system. Organize a local at every shipping station in this land of ours. Combine, and get your rights. It can easily be done. The Equity plan is simple, practical, and will deliver the goods. Don't dally and delay, and let the robber system keep on robbing. Afraid of spending $2? Why bless you, the "System" takes at least twenty cents of every dollar's worth of stuff you grow and market. The "System" you now use, owned by the other fellow costs you hundreds of dollars a year. Can't afford the $2? How in the name of common sense, then, can you afford to pay the "System" ten times as much or more?

My space is filled. I wanted to tell you about Paul and Morris and Carpenter, and the work in other districts, but I used the space in trying to drive home a lesson. But I will say that unless all signs fail, Oregon, Washington, Idaho and Montana will soon have a district organization that will be something to crow about; and nothing but plain stubbornness and blind indifference can prevent any other section of this country from doing the same thing.

—THE TRAVELER.

RING AND BRACELET GIVEN
FOR FEW HOURS WORK
Sell 6 boxes of Smith's Rosebud Salve at 25c per box, a great remedy for burns, cuts, sores, piles, eczema, catarrh, colds, croup, etc. When sold return the $1.50 and we will promptly forward the adjustable bracelet, bright gold finish, and the gold filled wedding ring or choice from our premium list. Send No Money. We trust you. ROSEBUD PERFUME CO. Box 226, Woodsboro, Md.

CANNING FACTORIES

Horse Book FREE

Here is a book that should be in the hands of every horse owner! Admittedly the greatest book on the subject ever written and practically *worth its weight in gold* to horse owners and livestock breeders. 520 large pages profusely illustrated. Part 1 deals in plain language with the theory and practice of Veterinary Science —Diseases of Horses, Cattle, Sheep, Poultry, Swine and Dogs—with tested and proved remedies. Part 2 contains Prof. Gleason's famous System of Horse Breaking, Taming and Training. Gleason's marvelous skill in training and treating horses is known throughout the entire world and he is considered the world's greatest authority in this field.

Our Great Offer! By a special arrangement direct with the publishers we are able for a limited time to offer "Gleason's Horse Book" *absolutely Free*—postage prepaid—to all who send only 50c to pay for a 3-year—new or renewal—subscription to our big farm magazine. Send your name and 50c at once.
Valley Farmer, Dept. H B-19, Topeka, Kan.

Each a Lucky Car

By R. E. Olds, Designer

In every make an occasional car proves almost trouble-proof. No breakdowns, no repairs.

The man who gets it tells his friends he got a lucky car.

But every buyer of Reo the Fifth gets a lucky car. This is how I insure it.

How I Do It

A lucky car means simply a car built with proper care and caution. I have spent 26 years in learning all that is necessary.

I have all of my steel made to formula. Then every lot is analyzed twice to prove its accord with the formula.

Then the finished parts are tested. In every part I require over-capacity, not less than 50 per cent.

The gears are tested in a crushing machine, to prove that each tooth will stand 75,000 pounds.

Springs are tested in another machine for 100,000 vibrations

Added Cost

I use big tires—34x4—to save you tire expense and trouble. This year, by adding 30 per cent to my tire cost, I have added 65 per cent to the average tire mileage.

I use in this car 190 drop forgings, to avoid all hidden flaws. Steel castings would cost half as much.

I use 15 roller bearings—11 of them Timken, 4 Hyatt High Duty. The usual ball bearings cost one-fifth as much, but ball bearings often break.

I use a $75 magneto to save ignition troubles.

I doubly heat my carburetor—with hot air and hot water—to deal with low-grade gasoline.

I use a centrifugal pump, instead of a syphon, to insure positive circulation.

I use 14-inch brake drums for safety. Also seven-leaf springs, two inches wide.

1,000 Tests

The various parts of this car, during the making, get a thousand tests and inspections.

Each engine, for instance, is tested 48 hours—20 hours on blocks, 28 hours in the chassis.

Fitted parts are ground over and over, until we get utter exactness.

Each body is finished with 17 coats. It is deeply upholstered with genuine leather, filled with the best curled hair.

The electric dash lights are set flush with the dashboard. Thus the car's appearance shows the care we use.

Center Control

No other car has such easy control as you find in this Reo the Fifth.

All the gear shifting is done by moving a handle only three inches in each of four directions.

Both brakes are operated by foot pedals. So the car has no levers, either side or center, to clog the way in front.

You get in this car the wanted left side drive. The driver sits close to the cars he passes. Yet you shift the gears with your right hand, just as with the old right hand drive.

Costs Me $200 Per Car

Reo the Fifth, without these precautions, could be easily built for $200 less. For the first few months you might not know the difference. But in years to come this skimping might cost you several times $200.

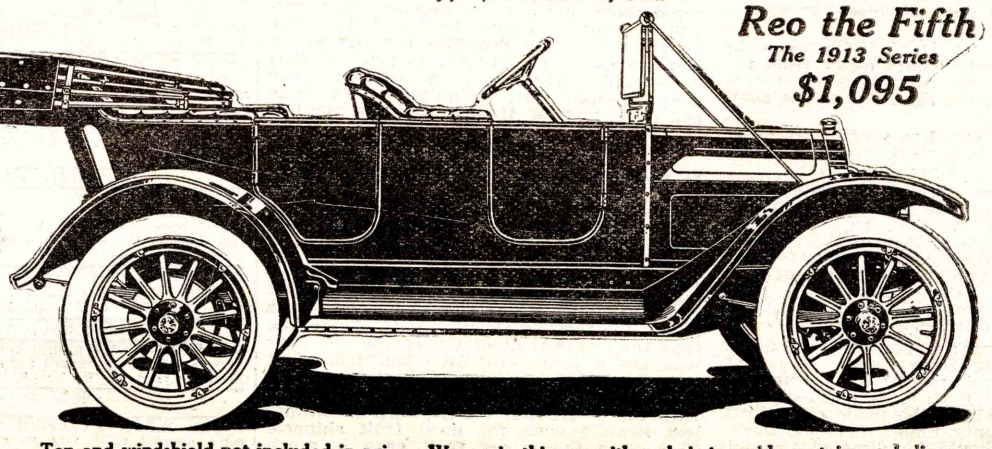
I know this well, for I have built cars for 26 years — over 60,000 of them. I know the cause of troubles.

I save this $200 per car by building only one model, by building all my own parts, by wonderful factory efficiency. And I put that saving into these extremes, to save you after-cost.

If you think that it pays to have a car like this, ask us to send you the details.

Our thousand dealers now are showing the 1913 model of Reo the Fifth. Write for our catalog and we will tell you where to see the car.

R. M. OWEN & CO. General Sales Agents for **REO MOTOR CAR CO., Lansing, Mich.**
Canadian Factory, St. Catharines, Ont.



Reo the Fifth
The 1913 Series
$1,095

30-35 Horsepower
Wheel Base—112 Inches
Tires—34 x 4 Inches
Center Control
Roller Bearings
Demountable Rims
Three electric lights
Speed—45 Miles per Hour
Made with 2 and 5 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170).

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION: *Can you give any information for the benefit of this local about the Independent Harvester Company, of Plano, Ill? This company is represented to us as being strictly a farmers' company and manufacturing and furnishing the farmers agricultural machinery equal to any.—Fred Reynolds, Stevensville, Mont.*

ANSWER: We understand the Independent Harvester Company is making good agricultural machinery and we recommend you to communicate with the company direct, or through their representative. It is a stock company and the stock is sold to farmers. We believe a condition is that any person who seeks the advantage of dealing with the company must be a stockholder. We believe that your local union can qualify for all of the members by subscribing for some stock as a local union. We are not much in favor of farmers taking stock in distant corporations, but in this case, if it can be seen that the saving is sufficeient, a moderate amount of stock might prove a good investment. How much can be saved in purchasing is a matter for you to investigate for yourself.

Q. *Our main crop is apples and peaches. At present we are wholly at the mercy of organized commission men. I have so far sold 1,700 boxes of extra and fancy Johnathans for 75 cents a box, f. o. b. Hotchkiss. It cost me 36 cents a box to pick and pack the fruit. This locality can ship 300 cars of apples, while our county produces between 3,000 and 4,000 cars.*

a. Can the F. S. E. under its present marketing system help us to market our fruit?

b. Could it help us as a county unit more, or would a local union organization be equally valuable?

c. Could the F. S. E. in its present organized condition handle the business of the California Fruit Growers Exchange?

d. Does the Grange, the Farmers Union, and other organizations co-operate with you?—Edmund Thorpe, Hotchkiss, Colo.

A. a. Yes.

b. A county union handling the products of your county as a single unit, will give multiplied benefits over a single local union or over a number of local unions, each working independent. For instance, in a county such as yours, the magnitude of your offerings will attract the best buyers in the country. Also, there will be economy in handling such large units. Also, as a county unit you will be justified in employing the best business agent that can be found and pay him as good a salary as high grade men get elsewhere. This would not be the case if there were a number of local unions, say ten or more, in your county, each with a business agent. Under the present complicated and involved system of marketing, it is only the high grade resourceful business man that can secure maximum results.

c. It could. That is, the Farmers Society of Equity plan adopted and followed out by the California Fruit Growers Exchange, and that federated with the Florida Fruit Growers Exchange, which ought to be a single proposition, would make the marketing of their class of fruit very definite and to the immense advantage of the producers.

d. As organizations, they do not, but a number of Granges and local unions of other organizations have affiliated with the Farmers Society of Equity, to market with our members.

Q. *We are frequently asked the following questionss*

a. Can local unions be organized at points other than shipping points or stations?

b. If a county union is organized, must all marketing be done through the county union?

c. If subordinate local unions can be organized at remote points away from the shipping point, must they have their produce handled through the local at the shipping point?

d. In case a member prefers to make his own shipments individually, can he be expelled from a local for doing so?

A. a. Local unions can be organized at remote points from the marketing town or shipping point, or station, but such local unions must be subordinate to the business organization or central local union at the marketing place, and the marketing of such members must be done through the chief local union. Such subordinate local unions will be issued a charter.

b. Local unions are permitted to adopt by-laws governing themselves. Therefore, they can decide this matter for themselves, but we will say that it is decidedly advantageous and should be made obligatory, that when a county union is in existence, the marketing should be directed through such county union according to the plan of the Farmers Society of Equity.

c. This is answered in "a".

d. Yes, if the local union makes such a law, and it is broken by a member, he can be expelled from the local union. Also, there may be a penalty provided in the by-laws for cases of this kind and the party can be held for damages.

Q. *The broomcorn growers in Oklahoma, Kansas and Illinois need an organization very much. They have been exploited unmercifully by the buyers and speculators for years. Please inform me as follows:*

a. What provision does the Farmers Society of Equity make for organizing special crops like broom corn?

b. Would there by any advantage in having a broomcorn growers' union, or department of the Farmers Society of Equity, over independent organizations?—F. M. Goodwin, Logan, Okla.

A. a. The plan of the Farmers Society of Equity provides for department unions. These to be organized when the membership in the Society reaches a point to justify it for various crops or classes of crops. The idea is that then in the national convention where prices are decided, the growers of such departmental crops will have their own say as to what the prices shall be, except that after the department decides prices for the crops included in their own department, all such prices will be reviewed by the whole body of producers in the national convention, with the idea that all of the crops may be priced proportionately; that is, that one crop will be as attractive to grow from a financial standpoint as any other crop. Only in this way can over-production of some particular crop be prevented. To illustrate this point further; will say that if the broomcorn growers, either as a Department of the Farmers Society of Equity, or an independent organization, would be permitted to price broomcorn irrespective of values placed on other crops, and if they would make the prices higher than would be made on other crops, and could maintain such higher prices than could be maintained on other crops, it is plain to see that farmers would discontinue some other crops and engage in growing broomcorn. When this would occur, it would soon become impossible for the growers to be in control of the production and also in control of the price and such independent organization of broomcorn growers, or the department of broomcorn growers in the Farmers Society of Equity, would collapse. The Farmers Society of Equity would be pleased to have good local people in the broom corn growing sections to apply for commissions to organize, or if the growers in any section of country will earnestly petition National Headquarters of the Farmers Society of Equity for an organizer, one will be sent. In view of the fact that broomcorn is grown in well-defined districts, it is entirely possible to put them in an organized condition before the 1913 crop needs to go on the market. But this is something that the national union of the Farmers Society of Equity cannot force on the growers if they are reluctant. There must be a spontaneous and general demand for relief. It does appear to us that that time has come. It is something to know that when any class of farmers have been exploited to the limit, and that they will beat no more, that they can now turn to a sound organization, and a sound plan, and solve their problems whenever they want to.

b. This question was answered in "a".

Q. *What is the attitude of* UP-TO-DATE FARMING *toward the single tax method of raising revenue?—Wm. Loest, King City, Mo.*

We are dead against it. We expected to publish our views on this subject before this time, but pressure of other matters always appeared to interfere with us writing them. We will publish them as soon as possible. In the meantime I believe you need not be apprehensive of Missouri adopting such a policy. If however, you think there is danger, please let us know the status of the matter in your state.

Q. *I want to get into the Farmers Society of Equity but I don't want to go in blind-folded. So let me know where to ship my cotton and how much it will cost me for marketing through the Society. Will it be sold on commission, or has the Society its own cotton agents to sell for its members?—W. I. Johnson, Jenks, Okla.*

The Farmers Society of Equity has arranged with responsible handlers of cotton in Galveston, New Orleans, Mobile and some other markets. All cotton is sold on commission and the commissions that prevail in those markets, apply. Cotton can be shipped to the Society's representatives and stored for an advance in price, if that is desired. The minimum charges have been arranged for, including money at 6 per cent. interest if advances are wanted.

It Doesn't Pay to Fool the Consumers

Last season the orange crop in California was seriously injured by a hard freeze. The oranges were nearly ripe on the trees. The frost took nearly all of the juice out of them, without actually destroying the oranges. Many growers marketed this fruit, and it was bought by consumers much to their disgust. Notwithstanding that the citrus fruit of California last year was not a large crop, the bad fruit that was marketed, so disgusted the consumers that they even left the good fruit alone, with the result that the growers oftentimes lost heavily even for good fruit shipped. This year the citrus fruit crop is much larger than it was last year. If the growers and shippers will take the advice contained above, and follow it out honestly and conscientiously, they can expect the consumption of oranges, lemons and grape fruit, at moderate prices, to be very heavy Some such precaution at the start may save the growers from even heavier losses than suffered last year.

Evolution of Farming Pleases

DEAR EDITOR:

I like the articles on "The Evolution of Farming" best, because we get the Minnesota Agricultural Bulletins and get all the instructions we need on producing. I am a country school teacher. Several articles from your magazine have been read in the agricultural class. We enjoy them very much, and they will be of much benefit to my pupils.—Miss Mary McNeely, Northfield, Minn.

J. A. EVERITT, Pres. F. S. E.:

I am doing all I can in my spare time to induce farmers to join our Society. While this section is one of the most beautiful and productive in the United States, the majority of farmers are not out of debt; therefore they think they must sell their crops as soon as possible to meet their obligations. However, I think it is possible to show them that there is a better business way that will lead to more independence.

Contrasting the liquor evil and the middle system of exploitation of the necessaries of life, I believe that the latter causes more poverty and misery than the saloons.—Chas. Baer, St. Joseph Co., Mich.

One Idea of Good Farming

"Sambo, is your master a good farmer?"

"Oh, yes, massa; fuss rate farmer. He make two crops in one year."

"How is that, Sambo?"

"Why, he sell al his hay in de fall and make money once; den in de spring he sell de hides of de cattle dat die for want of de hay and make money twice."

$10,000,000 A Year Wasted On Trusses

Wrong to Buy Anything for Rupture Without Getting Sixty Days Trial

A conservative estimate shows that nearly ten million dollars a year—in this country alone—is practically wasted on worthless rupture appliances—all because people trust to a mere try-on instead of making a thorough test.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of **good** enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the cure and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

FOR SEWING LEATHER

"PICK" BEST CORN CURE FREE—Agents wanted; write Doctor Jethro Davis, Raritan, Ill.

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

About Wilson's Crop Report

DEAR EDITOR:

The crop reports that Secretary Wilson is sending out are very injurious to the farmers. They have caused prices to drop below the cost of production on several of our crops. Farmers should protest against this to the full extent of their ability. They can not be of any benefit to the farmers, but they are of peculiar advantage to the speculators and gamblers who use them when the crops are maturing and in the first marketing to keep the prices down until the middlemen have loaded up their warehouses. Secretary Wilson may have the right to thus aid and abet our exploiters, but wherever he got the right it should be taken away from his department. I hope that you will mention this matter in your paper, and I hope that the farmers for their self-defense and protection, will send their protest to Washington. —Sol. F. Gadberry, Jasonville, Ind.

—::—

DEAR EDITOR:

My wish is that more space in our paper be given to the reports of co-operation in marketing, even though it is necessary to sacrifice some of the space given to the articles on production. My reason for this is that nearly all our farmers are readers of other farm journals and as farm papers are published in all of the states they are in closer touch with the local conditions and can handle them to better advantage than a paper of general circulation like Up-to-Date Farming. So give us more co-operation in marketing, for we can raise plenty of stuff and what we need is to be able to market it to get the proper price. Up-to-Date Farming is the only paper to my knowledge that is giving attention to this important part of agriculture.—INO HICKS, Moore, Okla.

—::—

DEAR EDITOR:

The articles on co-operation in marketing are the most valuable to me and I would like to see more space in Up-to-Date Farming given to them. My reason for this is self-evident when we consider that all other farm papers make it a point to tell the farmers how to produce a large crop, when this is not the real need. The average farmer knows how to produce a good crop, but very few of them know how to market it so as to get the most for it. That is why I think we should have more good articles on marketing, and that is why I like Up-to-Date Farming better than other papers.—Clarence N. Alvey, Otterbein, Ind.

—::—

DEAR EDITOR:

I think that if you had to sacrifice some articles on production to make room to print the articles on "The Evolution in Marketing" in Up-to-Date Farming, that it was the proper thing to do. The topic is one which will interest all farmers. The system of marketing should be improved and the farmers should receive higher prices for their products. Instead of letting speculators and middlemen get hold of the crops, farmers should be taught how to control them and be given a system and plan for doing it. I hope people will not neglect to read on this subject and all farmers should subscribe for Up-to-Date Farming.—F. E. Urlensky, Nianto, Conn.

—::—

DEAR EDITOR:

In my opinion it there is any interest that needs protection at this time, it is of the farmers in marketing their crops. This part of the farmers operation has been, and is entirely neglected as far as giving practical and beneficial results is concerned. Yet it is the most important issue of the two great parts of agriculture, Producing and Marketing. Much has been done toward teaching them the value of correct marketing system. I am one to believe that the workman is worthy of his hire and every person should be paid fair wages, especially for his effort to preserve humanity.

At present very often there is nothing in it for the farmers. He simply grows the crops and then sees it pass from his possession without full value in return. So it is simply producing a valuable commodity and then giving it away or throwing it away, while other people skim the cream from it. Every farmer must be taught how to market and then they must all get into an organization that will enable them to market properly.

I am very glad to see that Up-to-Date Farming is taking an active interest in this side of agriculture. The intense interest shown at this time in the subject of marketing is very encouraging and the efforts your paper is making should be approved by every farmer in the United States.—J. J. Jones, Tuskegee Inst., Ala.

—::—

DEAR EDITOR:

I want to see more space given to the evolution of marketing in our paper, Up-to-Date Farming. It is quite essential to get all the farmers to market their produce co-operatively as only in this way will they receive the most benefit from it. Co-operative marketing by the system that Up-to-Date Farming recommends will do away with glutted markets. All other classes of people look after the marketing very carefully, therefore, why can't the farmers attend to the marketing side of their business. I would like to see more space given to such articles as appeared under the heading, "Evolution in Marketing."

I send best wishes for the success of our noble paper and the cause that it advocates.—G. A. Liddle, Argyle, N. Y.

—::—

DEAR EDITOR:

I want to see more space given in our paper to the subject of marketing crops, and the way to do it to preserve to us the fruits of our toil. Many farmers around here actually lose what they have produced, and many of them cannot see any way out of the difficulty. All such should be steady readers of Up-to-Date Farming.—Willis Fogle, State Line, Miss.

—::—

DEAR EDITOR:

In the articles under the head, "Evolution in Marketing," you have struck the right key. Give us more of the same line. Other publications teach the theory, and some of us know something of the practice of good production. What we can learn is better marketing and systematic marketing is clear gain.—W. H. Eastman, East Sumner, Me.

—::—

DEAR EDITOR:

Your articles on the "Evolution in Marketing" are very interesting and instructive. I should enjoy something of the kind frequently. I would regret to have the articles on production sacrificed, therefore, if necessary the subjects might be alternated in different issues.—Erin Putnam, Talpa, Tex.

—::—

DEAR EDITOR:

Up-to-Date Farming as it is being published at the present time meets with my entire approval. You are giving, I think, just enough space to the reports on co-operation in marketing, and to the other important subjects on production of farm crops, to make Up-to-Date Farming the most helpful paper I have ever seen, and to arouse interest in farm work. The articles on marketing add greatly to the general intelligence of farming people. The moderate price at which Up-to-Date Farming is furnished puts it within the reach of all and it should go to every farm home in the country.—Henry Douglas, Maben, Miss.

—::—

DEAR EDITOR:

I would prefer to see more space given to co-operation in marketing in our paper. It seems to me that there is an abundance of crops grown now and what we need is to know how to sell them so as to have a reasonable profit left for our investment and labor. I think Up-to-Date Farming is getting better all the time. I enjoy the serial stories and Home on the Farm. Also I enjoy reading the poultry articles, but what we need most is to learn how to get more of that money that the middleman is taking for handling our crops, and then the people on the farms can begin to enjoy more of the comforts that are now enjoyed by those people who take our crops after they are produced and pass them on to the consumer.—Walter A. Orrs, St. Peters, Pa.

—::—

DEAR EDITOR:

After giving the matter careful consideration, I have come to the conclusion that it would be a great deal more help to all of farmers if Up-to-Date Farming would give its space to marketing instead of to the increased production of crops. We are all fairly well up on the making of crops, but we are sadly behind on the marketing side of our business.—Henry P. Patton, Sardis, Miss.

—::—

DEAR EDITOR:

I would much prefer more of space in Up-to-Date Farming to be given to reports of co-operation in marketing. I like the articles under the heading "Evolution in Marketing" very much.—G. A. Mitchell, Cedar Rapids, Iowa.

—::—

DEAR EDITOR: I am highly pleased with Up-to-Date Farming as it is presented now. I enjoy reading the articles on co-operation in marketing very much. I believe you cannot devote too much space to such articles, as they cover the subject that is most in farmers minds at the present time.—Mrs. Agnes Mitchell, Hoisington, Kas.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Mr. Edison's Pet and Hobby

He realizes the wonderful value of his phonograph as a cementer of home ties and as a maker of happy homes. And for this reason he worked for years striving to produce the most perfect phonograph. At last he has produced this new model, and his friends have induced him to take the first vacation he has had in over a quarter of a century. Just think of it; over twenty-five years of unremitting work on many inventions—then his pet and hobby perfected—then a vacation.

Wonderful NEW Edison Shipped FREE

Write today for our new Edison catalog that tells you all about the wonderful new model Edison with Mr. Edison's new Model R Reproducer and the new parlor grand equipment. With this catalog we also send full explanation of our free shipment offer.

Mr. Edison Says

"I want to see a phonograph in every American home."

The Offer We will send you the new model Edison Phonograph and your choice of over a thousand records on an absolutely free loan. We want you to have all the waltzes, two-steps, vaudevilles, minstrels, grand operas, also the sacred music, etc., etc., by the world's greatest artists. Entertain your family and your friends. Give plays and concerts right in your own parlor. Hear the songs, solos, duets and quartettes, the pealing organs, the brass bands, the symphony orchestras, the choirs of Europe's great cathedrals, the piano and violin concerts, virtuoso—all these we want you to hear **free** as reproduced on the new Edison. Then, when you are through with the outfit you may send it back to us.

Read this remarkable **Free Shipment** offer on the first lot of the new style Edison Phonographs; these new Phonographs to be shipped **FREE** on this special offer **NOW.**

The Reason Why should we make such an ultra-liberal offer? Why should we go to all this expense and trouble just so **you** can have all these free concerts? Well, we'll tell you: we are tremendously proud of this magnificent new instrument. When **you** get it in your town we **know** everybody will say that nothing like it has ever been heard—so wonderful, so grand, so beautiful, such a king of entertainers—so we are pretty sure that at least some one, if not you, then somebody else, will want to buy one of these **new style** Edisons (**especially as they are being offered now at the most astounding rock-bottom price and on easy terms** as low as **$2.00 a month**). But even if nobody buys there is no obligation and we'll be just as glad **anyway** that we sent you the **New** Edison on our free trial; for that is our way of advertising quickly everywhere the wonderful superiority of the **New** Edison.

FREE: Our New Edison Catalog

Write today for our new Edison catalog and learn all about the wonderful New Edison. Learn how thousands of people are entertaining their friends by giving Edison concerts—learn how the boys and girls are kept at home and all the family made happy by the wonderful Edison. No obligations whatsoever in asking for this **magnificently illustrated** catalog, so write now.

GETTING NEAR THE TRUTH

PRESIDENT H. J. WATERS, of the Kansas State Agricultural College, says the high prices consumers have to pay for food products is due largely to the cost of getting the products to the users. He declares that a fifth of all living expenses goes to pay freight and express bills. This does not necessarily mean that freight bills are too high, but that the stuff is so unwisely distributed as to make an unnecessary milage of transportation.

The remedy President Waters suggests is greater co-operation between city and country to avoid so much shipping. He refers to the fact that last fall the College of Agriculture at Manhattan found a market for the big apple crop of Kansas, and saved the crop both to users and consumers.

President Waters is very near the truth in this important matter. As he himself said, on many important products the farmers receive no more than 43 cents on the dollar of what the users are required to pay. This condition must be changed before consumers can get the stuff at a reasonable advance over what the farmers receive. Increased production will not change it. All the figures show that an abundance is produced, and that first prices are low; but the markets and distribution are so completely controlled by greed that the price insistantly grows until the stuff reaches the table. If President Waters will study the Equity System he will find a remedy sure, simple, practical and easily applied.

Easily Stopped

Doctor—How do you feel this morning?
Patient—Pretty well, except that it hurts me to breathe. The only trouble now seems to be with my breath.
Doctor—Oh, I can soon give you something that will stop that.

Bread Getting Higher

Susan—I suppose as everything else is going up, bread will rise, too.
Betty—It ought to. I wouldn't care to bake bread if it didn't rise.

PULL THE STUMPS

If you have stumps on your farm, do you know that they occupy the richest land? That good virgin soil ought to make money for you. And if you only have a few stumps think of the annoyance they are in preparing the ground and harvesting—always in the way.

Besides clearing up your own land, stump pulling as a business is a money making business. Requires little capital, and can be done in your own locality. We suggest you write the Hercules Manufacturing Company, 760 Twenty-first street, Centerville, Ia., who will give you valuable information.

Indianapolis, Ind.

or write Superintendent of Immigration, Ottawa, Canada.

Organizers

THE Farmers Society of Equity wants an organizer in each community.

A local union must be organized at each market town and city or shipping station. We have an exceptionally good proposition for the right person. The right person is any man who stands well among his neighbors and wants a better marketing system established, as well as the ability to buy everything at wholesale prices.

Hundreds of organizers who succeed locally will be given a larger field. If you want to employ part, or all of your time profitably, write for our terms.

A post card or letter will bring full particulars by return mail. Don't delay. Every field should be occupied.

Farmers Society of Equity
Indianapolis, Ind.

A Subscription Representative Wanted in Your Locality

Every neighborhood affords a fertile field for securing subscriptions to Up-to-Date Farming. We want a representative in every locality and also traveling agents. Experience is not necessary, we will furnish full instructions and help you to make money securing subscribers for us.

Canvassers now selling in Rural districts will find it easy and very profitable to solicit subscriptions for Up-to-Date Farming, in connection with their other work.

Experienced subscription agents should write for our proposition. This paper does more for farmers than any other and is the easiest to secure subscriptions for.

If you want to make more money write today.

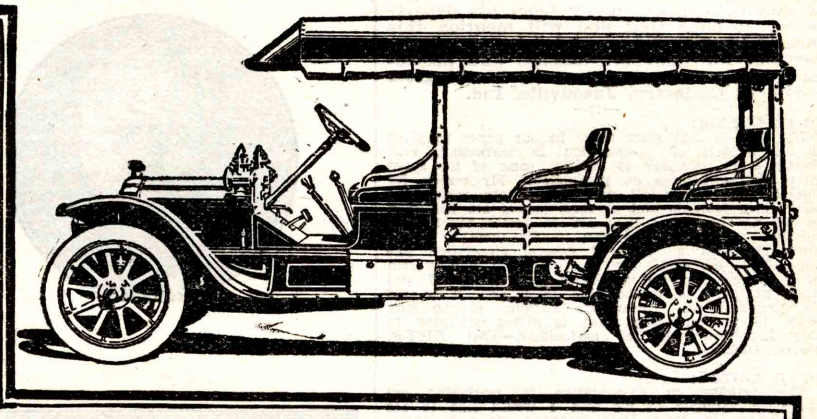
Two Ordinary Touring Cars, Two Wagons and Two Teams of Horses,

Approximate, but Do Not Give the Pleasure or Actual Service of—



The White Combination Car

The Most Remarkable Car Ever Made. It is a Touring Car and Motor Wagon of the First Grade—All in One.

Why We Built This Practical, Complete Car.

THE automobile business has now reached the point where sentiment has given way to reason. The earliest designs of cars followed the model of horsedrawn vehicles. Then came the present design, with engine in front, and seating in a carriage body 4, 5, or 7 people, according to size and price. But this type, now so common, has no provision for any extra passengers or even light baggage. On the other hand there are many times when you drive alone or with only one passenger, but the big empty tonneau you find useless for any practical purposes, because of the fixed, impractical carriage body. This condition of affairs with thousands of owners has made a place for the White Combination Car.

A Luxurious, High Grade Automobile, it is Still Practical and Economical.

If you own an automobile you appreciate this condition at once. If you do not, it will confront you in the near future. Good as it is, any ordinary Touring car is an expense—a luxury. You enjoy the exhilaration of its speed and the easy way it shortens distances. But you grumble at its uselessness for any sort of practical work, as you jog to town in your loaded wagon behind slow moving horses, and think of its powerful engine, so capable of *work*, lying idle at home. And there never *was* a touring car that could take, in one load, a merry party such as filled the big spring wagon—until the Nine Passenger White was made. This car does the work and play of all your wagons and touring car *combined*, and lasts longer than any.

Its Design, Power and Equipment.

The lines of this car are distinct. It is a departure from the touring car models, while in its grace and finish it does not resemble a motor truck. It has a wheel base of 120 inches, 34x4½ inch tires and a perfectly balanced chassis. This gives the greatest riding comfort and makes it as easy to operate as a light roadster. It is driven by the famous White, long stroke, 30 h. p. quiet engine, appreciated the world over for its economy of fuel, its dependable power and durability. Even when fully loaded this car will pass most cars on the level, and will easily make hills that other cars cannot climb at all. *There is ample room on the driving seat for two and each of the two seats in the wagonbox comfortably hold three. These are roomy and comfortable and are amply cushioned with the best finished leather.* When desired, one or both of these seats can easily be removed by one person in a couple of minutes, and the space utilized for baggage, freight, produce or anything you want in a compartment 6 ft. 10 in. long, 43 in. wide, 5 ft. high from floor to top, with side boards and tail piece 14 in. high. This serviceability does not affect its qualifications as a high grade automobile. Every part of the car—its power plant, chassis, springs, wheels, lamps, top and curtains, body and seat fittings—are the result of the highest type of workmanship and engineering ability, and the very best materials—as in all other White cars, which are second to none in the world.

This is the Car You Actually Need.

Whether you own an automobile or not, this is the car you need, the car you have unconsciously wished for—the car you would buy could you see it and have it demonstrated. Fill in coupon below *today*.

GRAND INVENTION!

NO MORE WASH DAY!

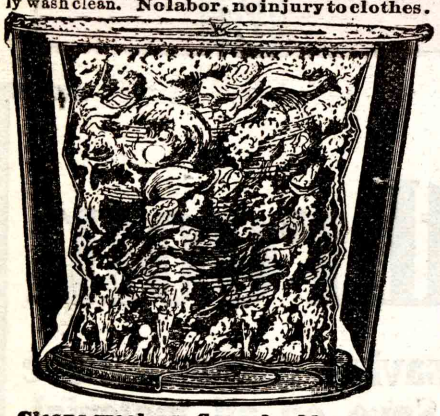
EASY METHOD Of Cleaning Clothes

Cleans Family Wash in 30 to 50 Minutes—Woman's Hardest Work Made Easy—No Motors! No Chemicals!

NOT A WASHING MACHINE

DOES THE WORK IN ONE OPERATION

SEE HOW SIMPLE—DIFFERENT, EASY. Put on any stove—add water, then soap, then clothes—**move knob occasionally.** In 5 to 8 minutes first batch washed—next batch same way, same water—in 30 to 50 minutes family wash clean. **No labor, no injury to clothes.**



Cleans woolens, flannels, blankets, or colored clothes, as well as white goods, finest laces, curtains, bed clothes. **Saves time, fuel, labor.**

EASY WAY in 30 to 50 minutes cleans washing which before took entire day. All metal, strong, durable, sanitary, light in weight. Easily used, cleaned, handled—always ready. Child or weakly woman can use it. Saves washday drudgery.

Users Praise the "Easy Way."

J. McGee, Tenn., writes:—"One young lady cleaned *day's washing* in *one hour* with Easy Way—another in *45 minutes.*" Mrs. T. Bullen, Canada, writes:—"I washed *bedding, heavy quilts, curtains, etc., without rubbing.*" Lauretta Mitchell, O., writes:—"Done a *big washing in 45 minutes—sold 3 already.*" A. D. Poppleton, N. Y.:—"Gives perfect satisfaction. Washed bed quilts, *greasy overalls* and fine clothes. Greatest thing on earth." F. E. Post, Pa., writes:—

TWO WEEKS WASHING IN 45 MINUTES. Clothes cleaned *without rubbing.*" J. H. Barrett, Ark., after ordering 38 Easy Ways says:—"You have the grandest invention I ever heard of." J. W. Myers, Ga., says:—"Find check for 12 Easy Ways. Greatest invention to womanhood, forever abolishing miserable wash day. *Sells itself.*"

AGENTS GETTING RICH

R. O. Cowan, N. Y. placed 13 in 6 hours—(*profit $39.00.*) Mrs. J. Brown, sold 10 in 3 days—(profit $30.00.) K. J. Blevins, O., writes: **"Made 7 calls, sold 5 one day"**—(profit $15.00.) R. H. Latimore, Pa., writes: "Sold 4 this morning. *Never yet turned down.*" A. G. Witt, Pa., "Received Easy Way yesterday; sold 4 today—not out for orders." Mrs. Gerrish, Mont., ordered sample, then 1 dozen, then 100—(*profit over $300.00.*) **Just made one shipment 1000 Easy Ways** to Russian agent. N. Boucher, Mass., orders 75 more, says: "Everybody wants one, *best business I ever had.*" A. S. Verrett, La., sold 8 in one day—(profit $24.00.)

FREE SAMPLE To Agents

We want managers, agents, men or women, home or traveling, all or part time, to show, take orders and appoint agents. **Easy Way new article,** not worked to death. Best seller out. Every family wants one. People glad to see it demonstrated; buy without being asked, and throw away costly washing machines to use it. **Only 2 sales a day means $36.00 a week profit.**

Price only $6.00 ready for use. Sent anywhere. Not sold in stores. *Order one for your own use.*

Send for Free Sample offer, special agents' proposition, etc. **Costs nothing to investigate.** Send name and address anyway for full description. Write today. **Harrison Mfg. Co.,** 2259 Harrison Building, **Cincinnati, O.**

MINNESOTA has a home for you. Good land at low prices. Literature giving information about soil, climate, price of land, etc., sent free on application to H. J. Maxfield, Commissioner of Immigration. Room 204 State Capital, St. Paul, Minn.

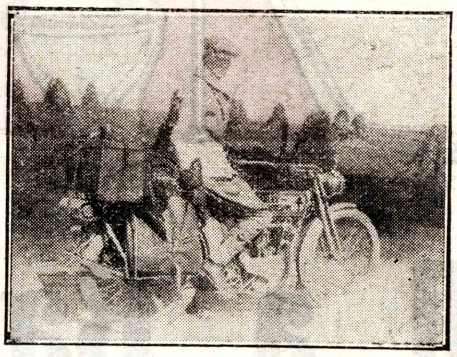
MAIL POSTAL NOW

MISSIONARIES ON MOTORCYCLES

THE Wisconsin Anti-Tuberculosis Association has created a new utility for the motorcycle in instituting its new method of sending lecturers throughout the Badger state on motorcycles.

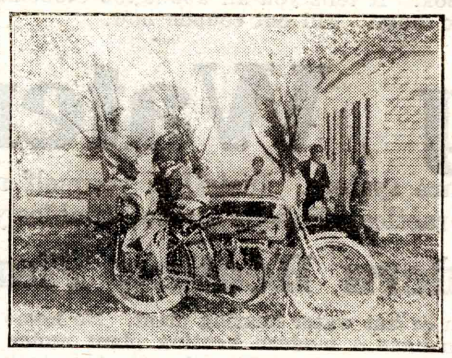
Each lecturer's complete equipment includes wearing apparel, sleeping tent, cooking utensils and eatables,



for he camps by the road-side and in the woods at night, and his stereoptican machine with its full set of chart slides, picturing the entire subject, all are strapped behind on his motorcycle.

He stops wherever he can gather an audience and after cautioning his listeners of the danger of tuberculosis and showing how to avoid and eliminate that enemy of mankind, he dashes off again to the next stop.

Any morning will find him preaching to a collection of farmers at the creamery, postoffice, or railroad station. At noon he is speaking to some factory employees, while they are at lunch. Afternoon recesses are often spent by the school children in listening to his valuable words and at night



the public square of a small town or some city is crowded with another audience.

And so these missionaries cover miles each day on their journey of good deeds and the trusty motorcycle plays an important part in this new and wonderful work. All kinds of roads and weather are encountered and the daily grind is indeed a hard one, but as pictured here, Mr. J. Werle and his Harley-Davidson, nothing seems to hinder these missionaries and their modern mounts.

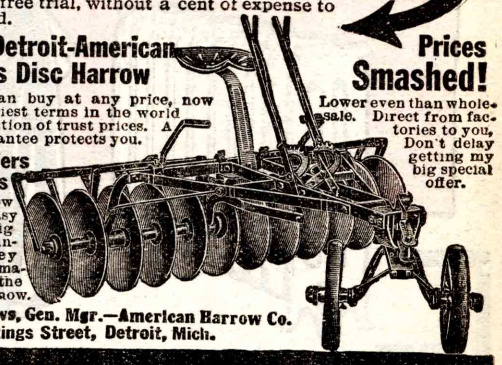
This Big Book FREE

Prices Smashed!

Lower even than wholesale. Direct from factories to you, Don't delay getting my big special offer.



Fred C. Andrews, Gen. Mgr.—American Harrow Co. 1429 Hastings Street, Detroit, Mich.

Fruit Growing Pays

There is big profit and pleasure in fruit growing. Even a few trees are profitable. Apples are worth twice as much as Oranges! For years we have advised our readers to plant orchards, and many are now getting their reward in big profits. Every home-owner should plant a few fruit trees.

GREEN'S FRUIT GROWER tells you how and where to plant, how to prune and spray, and how to make your fruit trees most productive. Mr. Green has piloted many orchardists.

One of our subscribers writes us that he got $596.91 net from five acres of strawberries.

Another one got $240.64 net from two acres of raspberries.

Another one got $490.66 net from two and a half acres of cherries.

This is better than growing wheat at $1.00 per bushel, thirty bushels to the acre.

Charles A. Green, the man who, over thirty years ago, discovered that fruit growing was the best and most profitable way to occupy land, has written an intensely interesting and highly instructive book, "How I Made the Old Farm Pay." It is worth many dollars to any fruit grower or farmer. It is a story of Mr. Green's actual work and its results. YOU may follow its methods and teachings and make your farm much more profitable.

The January, 1913 "Brim Full" Number.

A SPECIAL OFFER

Send 50 cents now and get GREEN'S FRUIT GROWER for twelve months and Green's booklet, **"Thirty Years with Fruits and Flowers."**

Or send us $1.00 to-day and we will send you GREEN'S FRUIT GROWER every month for thirty-six months and Mr. Green's famous book, **"How I Made the Farm Pay."**

To Show You What Others Are Doing We Quote the Expressions of a Few Who Have Made Money in the Plating Business

Mr. Reed, Ohio, made $88.16 THE FIRST 3 DAYS. Mr. Cox, Illinois, writes: "GET ALL I CAN DO;" plate 30 sets a day. Elegant business: Customers happy. "Mr. Woodward earns $170.00 a month." M. L. Smith, Pennsylvania, says, "GOT $301.27 plating in 2 weeks" (used small outfit). Geo. P. Crawford writes: "Made $7 a day. "J. S. Mills, a farmer, writes: "EASILY MADE $5 A DAY PLATING." Thos. Baker, school teacher, 21 years, writes: "I made $9.80 profit one day, $9.35 another." Albert McWethy, N. Y., "EARNED EVENINGS OVER $20, with no soliciting." H. H. Ward, Tenn., "EARNED $5.00 A DAY spare hours from my printing business." Chas. Branther: "I made IN ONE DAY, $17.85 PROFIT." Sam Brown, Me.: "Plating ODD HOURS MADE $37 profit in a week." E. B. Woodbury, old soldier: "Plated 1800 pieces table ware, AVERAGING $6 PER DAY PROFIT." E. L. Gracier, teacher, Philippine Islands: "I make $3 daily, besides teaching." R. T. Bartlett: "I made $2 per hour spare time." D. F. Fuller: "$5.25 first day." W. H. Davis, writes: "I get all the plating I can do." B. G. Vaughn, S. C.: "I conscientiously recommend the Royal Plater—do splendid work—average $5 per day." J. H. Carrier, N. Y.: "I made $6 IN 3 HOURS spare time." J. Anderson, N. D.: "You can get plating to do at every house." H. H. Bender, Mich.: "There is a great demand for replating." R. R. Howard, Mo.: "HAVE MORE WORK THAN I CAN DO." H. H. Ward, Tenn.: "Gray & Co., are thoroughly reliable and all who patronize them will receive fair treatment." Geo. E. Wilson, N. Y.: "Am now making nice living in the evenings. I make some weeks $20."

H. E. Woodward, of Pa., writes: "I have all the work I can do. I have two solicitors. It is very easy to learn to do plating. **I have done from $8 to $10 worth of work per day.** I can do more as I gain in practice. I thank you for the gentlemanly way in which you have treated me since I commenced to deal with you."

SHOP OUTFIT FOR GOLD, SILVER OR NICKEL PLATING

What is the Use of Your Slaving Longer for Some One Else?

Why not start a business for yourself, reap all the profits and get a standing in your locality? If you are in some one else's employ, remember he will continue to pay you a salary only so long as he can make profit of your labor.

In this era every bright man is looking to own a business, to employ help, and to make money.

It is just as easy to make money for yourself as it is to coin money for some grasping employer, who pays you a small salary each week.

If you are making less than $30 weekly it will poy you to read this announcement, for it will not appear again in this paper.

If you read it and take advantage of the opportunity offered, you will never regret it. To own a business yourself is certainly your ambition.

We start you in a profitable business. Teach you **absolutely free** how to conduct it.

It is no trouble to make $5 to $15 a day at home or traveling, take orders, using selling and appointing agents for PROF. GRAYS' Latest Improved, Guaranteed Plating Machines and scientificETAOIN HRDLU HR Outfits. It is a practical, complete, scientific outfit for doing the finest plating on WATCHES, JEWELRY, KNIVES, FORKS, SPOONS, CASTORS, TABLEWARE OF ALL KINDS, BICYCLES, SEWING MACHINES, SWORDS, REVOLVERS, HARNESS AND BUGGY TRIMMINGS, metal specialties; in fact all kinds of metal goods, HEAVY THICK PLATE EVERY TIME. GUARANTEED TO WEAR FOR YEARS. No experience necessary.

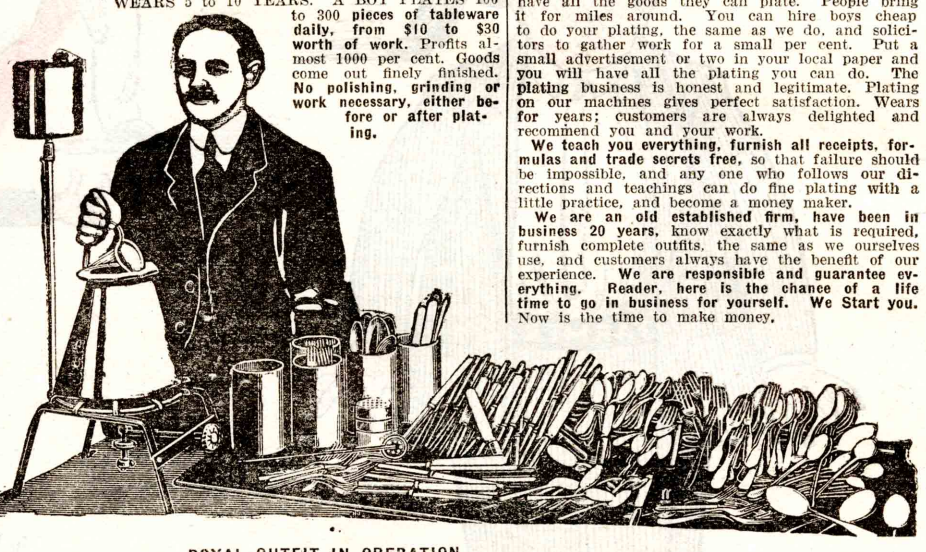
There is really a wonderful demand for replating. You can do business at nearly every house, store, office or factory. Almost every family has from $2 to $10 worth of tableware to be plated, besides watches, jewelry, bicycles, etc.

Every boarding house, hotel, restaurant, college or public institution has from $5 to $75 worth of work to be plated. Plate some articles for your friends and neighbors by Prof. Gray's Process and it quickly proves to them its genuineness and merit, and that your plating is much thicker, will wear better and longer than a large percentage of the new goods. Your trade is then established, and within a short time you will have all the goods you can plate.

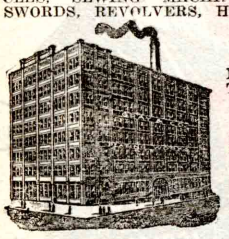
THE ROYAL OUTFIT

Prof. Gray's Famous Discovery

THE NEW DIPPING PROCESS is the latest, quickest, easiest method known. Tableware plated by dipping, taken out instantly, with a fine, brilliant, beautiful surface. All ready to deliver to customers. THICK PLATE EVERY TIME, WEARS 5 to 10 YEARS. A BOY PLATES 100 to 300 **pieces of tableware daily, from $10 to $30 worth of work.** Profits almost 1000 per cent. Goods come out finely finished. **No polishing, grinding or work necessary, either before or after plating.**



ROYAL OUTFIT IN OPERATION



We Send Sample Plating FREE together with our new plan and proposition, also valuable information how plating is done. Write for **FREE** sample anyway.

Gray & Co., Plating Works, 1528 Gray Bldg., Cincinnati, O.

The above firm is thoroughly reliable and do just as they agree. The outfits are just as represented, and do fine plating, and after investigation we consider this one of the best paying businesses we have yet heard of.—Publisher.

You Can Do Plating So Cheap

The best part of the plating business is that it increases fast and is permanent, and every person can afford to have their goods plated.

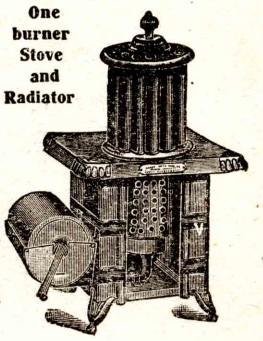
You will not need to canvass. Agents write they have all the goods they can plate. People bring it for miles around. You can hire boys cheap to do your plating, the same as we do, and solicitors to gather work for a small per cent. Put a small advertisement or two in your local paper and you will have all the plating you can do. The plating business is honest and legitimate. Plating on our machines gives perfect satisfaction. Wears for years; customers are always delighted and recommend you and your work.

We teach you everything, furnish all receipts, formulas and trade secrets free, so that failure should be impossible, and any one who follows our directions and teachings can do fine plating with a little practice, and become a money maker.

We are an old established firm, have been in business 20 years, know exactly what is required, furnish complete outfits, the same as we ourselves use, and customers always have the benefit of our experience. **We are responsible and guarantee everything. Reader, here is the chance of a life time to go in business for yourself. We Start you.** Now is the time to make money.

Portable Stove

Combined Heating and Cooking



One burner Stove and Radiator

The Portable Stove will boil, bake, fry, roast—cook anything. Ideal for quick meals, washing, ironing, hot water, canning fruit, camping. **Winter or summer stove.** Oil automatically turned into gas furnishes a steady, intense heat, passed into radiator and distributed throughout the room; or condensed under cooking vessels the heat is absorbed by articles being cooked. Heat under control. **Not Dangerous Like Gasolene.** No valves no wicks—nothing to clog, close up or get out of order. Heats rooms—slow fire or fast fire. No flues or chimneys. Light—pick it up, set it anywhere. **Many Thousands** of the Portable Oil Gas Stoves sent to families in all parts of the world. Men and women enthusiastic over its comfort, convenience and economy.

WHAT USERS SAY: "It is so convenient and economical." Rev. P. V. Hawkins, Ohio. "It is clean, convenient, no trouble, burns steadily; perfect baking." Henry Schilling, Ill. **"For Baking it has no equal,"** V. E. Bostwick, O. "Bakes pies cakes, bread; never saw nicer baking done," Mrs. O. Thompson., O. "Never cooked meals so quick and easy," James Newark, Mich. "Baked, cooked, washed, ironed—can do anything my range does." Mrs. M. E. King, Ky. "Cooked for a family of 6 for 5 days with 3 quarts of oil; **they are great time and fuel savers,"** H. M. Irey, Ia. "Heated a room when the temperature was 10 degrees below zero with one radiator." Wm. Baering, Ind. "With the radiator it soon warms up our dining room," J. F. Lisson, Calif. "We are using it to heat our office," McPherson Co., R. I. **"Only used a half a gallon of oil last week** for cooking, baking and ironing," E. N. Helwig, Ont.

CAN YOU DO WITHOUT
The Portable Oil Gas Stove

Save time, trouble, anxiety, annoyance, expense, drudgery, fuel bills. Get rid of kindling, coal, wood, dirt, ashes—all the nuisance. **ALWAYS READY FOR USE.** Practical invention. Simple, durable. Lasts for years.

PRICE IS LOW $3.25 and up; any number of burners. Give it a trial. Not sold in stores. Send no money. Write today **for full description.**

Any number of burners wanted

AGENTS MAKE MONEY
Quick. Easy. Sure.

Show Stove MAKING GAS—people stop, look, excited—want it—buy. B. L. Huested, Mich., "Was out one day, sold 11 stoves." W. E. Baird, S. New Invention SELF-HEATING IRON
The "Standard" Makes and Contains Its Own Heat

Works while it is heating, heats while it is working. Saves miles of walking.

SAVES ITS COST EVERY MONTH

Economical, perfectly safe, convenient. The **"Standard"** is stove, fuel, heat—all in one. **Fire is Inside.** Carry it about, go where you please. Don't stay in hot kitchen; iron any place, any room, on porch, or under shade tree. Go right along, one thing after another. All kinds of clothes.

IRONED BETTER IN HALF THE TIME

No waiting, No stopping to change irons. Right heat. Easily regulated. No time wasted. Iron on table all the time, one hand on the iron, the other to turn and fold the clothes. The **"Standard"** is neat, durable and compact; all parts within radius of iron and handle. No tanks nor fittings standing out at sides or ends to hinder or be in the way. No wires or hose attached to bother. **Right size, right shape, right weight.** Cheapest fuel, one or two cents does ordinary family ironing.

"Standard"

WHAT USERS SAY

Alex Stalker of N. Y., writes: "The Self Heating Iron received sometime ago and will say right here **it is the most useful time and money-saving device that was ever made.** My wife has just finished a large ironing in two hours that usually took her half a day with the old stove heating irons, and the house is cool. **It is certainly just the only iron made.** We want the agency." W. P. Farnum: "After receiving your iron and giving it a thorough trial it **will be a perfect success. My wife is enthusiastic** over the work it does and the economy in its use." Mrs. J. E. King, Ill.; "Received iron yesterday in good shape. **Well pleased with it.** I want the agency.' I. N. Newby, Ill.; **"Find it to be all you claim for it."** Mrs. Josephine Route, N. Y. "Received the iron O. K. and did my ironing with it yesterday. **I like it very much."** A. E. Covert, N. Y.; "Have lighted it several times already and find **I can do ironing so much quicker and cleaner than in the old way.** Think it is the **best thing I have ever had in my house."** Miss Roxie Sheets, of N. C.; " The two irons received and am delighted. **Have turned off our regular ironer and will do the ironing ourselves now.** Sold the extra iron to the first lady I showed it to." Mrs. Watson C. McNall, N. Y.: " **I am more than pleased with it** and its work. **It is not a bit clumsy. It is a delight to use it."** Mrs. Cora Wright, Ill.: "I received the iron Saturday and **like it fine."** Mrs. C. M. Winstead, Ky.: "I received my iron about three weeks ago. **Like it better than anything I ever saw in the way of irons."**

So they go—hundreds and thousands of delighted customers—the work of ironing cut in half—the expense of fuel almost eliminated—a Godsend to every home. **The poor** can afford it—**the rich** can buy nothing better. Every iron tested before shipping—fully guaranteed—ready for use when received. Price low—$4.50. Sent anywhere.

AGENTS MAKE MONEY. Men or women. Quick, easy, sure. **All year business.** Experience not necessary. Sells on merit—sells itself. They buy on sight. Every home a prospect. **Every woman needs it.** Price low—all can afford it. **HOW THEY DO SELL!** Every 2 or 3 a day gives $27 to $40 a week profit; 6 sales a day is fair for an agent; some will sell a dozen in one day. Show 10 families—sell 8. Not sold in stores. Send no money. Write postal today for description, agents' selling plan. How to get **FREE SAMPLE.**

A GENERAL AWAKENING

The Marketing Side of Farming at Last Being Recognized by Many Prominent People and Institutions

OUR persistent teaching for so many long and hard years is bearing fruit. Others are awakening to the need of reform in business farming, and great influences, powers that are capable of shaking the world, are taking up the question of marketing and distribution. These powers, as yet, are somewhat desultory in their plans and methods, but they are taking long strides in the right direction, and by and by, when they crystalize on a sure plan, the problem will be solved and solved quickly. The world cannot yet realize the benefits that will come with that solution.

And it is coming. Listen to this from a leading farm paper published in Philadelphia: "American farmers produce more than American consumers require." Those who are looking forward to what they call a "battle for food," ought to sit up and take notice. And note this from the same paper: "We are glad to see farmers waking up to the fact that they have been the worst used victims of the moneyed interests of the country." Of expressions like that fearlessly uttered by papers published in eastern cities, another class should take notice, a class that is determined through falsely attractive loans to get control of the farms as well as the business of the country.

Listen also to this from a high official of one of the greatest railroad systems of the world: "It cost last year in the United States seven billion dollars to distribute six billion dollars worth of products from the farm to the consumer." And that distinguished railroad man shows conclusively that this tremendous and unreasonable cost of distribution is not chargeable to the railroads, but to the present marketing and distributing system.

We could fill our paper with such quotations coming from the most distinguished sources almost all over the country, and they ought to inspire the farmers themselves to wake up sure enough and do their part in this wonderful work. But quotations are not all we have along these lines. We have several times referred to great business houses of Chicago that are appropriating vast sums in aid of better farming. As yet these have seen only the producing side, but like other progressive people they will see the other side and realize that to accomplish their good purpose for agriculture they must join the crusade for better marketing and distribution. It is so of the International Harvester Company. As we are assured after an interview with some of the authorities of this great concern, they, too, will bring the marketing proposition in their line of efforts.

The agricultural colleges are also falling into line, notably the great State Agricultural College of Kansas. It was our privilege recently to meet with the assembled farmers at this great educational institution, and to confer with the leading authorities that have made it great. At that meeting the following emphatic preambles and resolutions were adopted:

Whereas, it is evident that our present system of distribution of farm products and the distribution of the farmers' needs has been found wholly inadequate to meet the greatest needs of farm people and has developed an overbalanced commercial life with too great a difference between the price to the producer and the consumer, and

Whereas, Many organizations have been perfected in the past for the purpose of meeting the problems due to these adverse conditions, and

Whereas, There are many already existing organizations for the same purpose, such as the Grange, the Farmers Union, the Society of Equity, et al., and

Whereas, It seems that each has an important work to do and since it does not seem advisable at this time to abandon any of these worthy organizations or to unify them into one organization, and

Whereas, The Kansas State Agricultural College has been developing plans for the establishment of a Co-Operative Bureau for the purpose of meeting the needs and conditions above enumerated;

Be It Resolved, That recognizing as we do the conditions and the needs above enumerated and that all the people of the state have an interest in and a voice in controlling the said agricultural college, that it be the sense of this meeting that the agricultural college be asked to develope as soon as possible a complete Co-Operative Bureau for the purpose of aiding in the distribution of the products of the farm and in the securing in an equitable way all the needs of the agricultural people of the state, and that it shall become a bureau for the dissemination of such information as will protect the markets of the farm and shall serve as a medium between the producer and consumer; understanding that this Co-Operative Bureau shall co-operate with any and all existing organizations, and with any other organizations to be formed later that will tend to protect and advance the agricultural conditions, and to co-operate as may be deemed wise with similar organizations in other states.

Be It Resolved Further, That all organizations now existing having the same purpose in view shall be urged to co-operate and to assist the said Co-Operative Bureau of the agricultural college and that farmers living in communities where such organizations do not now exist be urged to form local clubs or organizations for the purpose of working through this Co-Operative Bureau.

The Answer

DEAR EDITOR:
Well, your question is a "sticker,"
But I'll try and answer you.
And I also will endeavor,
In answering to be true.

Were it possible to do so,
"Up-to-Date" should be enlarged.
But of course if it were larger,
More money must then be charged.

Now ALL matter is of value,
Which appears in "Up-to-Date,"
And all its departments suit us,
Yes, they suit us all first rate.

But the people are enlightened,
As to growing all crops well.
What they really need to know now,
Is just HOW and WHEN to sell.

There's a lesson they must all learn,
Even though the time is late,
"It is better late than never,"
They must now co-operate.

So it really seems to me now,
That this number is just right.
Enlightenment in marketing!
And for this we now must fight.

So let us all stand together.
Each doing our duty well.
And so by co-operation,
We will know just HOW to sell.
—Lincoln Rappleye.

The college authorities approve those resolutions, and will carry them out. So it will be in other parts of the country.

Even the Department of Agriculture is waking up to the importance of this question. A press notice recently issued by the Department, gives the following information:

Systems of marketing farm products and the demand for them at trade centers are the subjects of a special report to Congress by the Secretary of Agriculture, recently published. The report was made by special direction of Congress in order that information might be at hand concerning the establishment of a division of markets in the Department of Agriculture. The secretary specifies various items of service that could be performed by such an office, with recommendations that they be adopted, if it is created. The report covers 391 pages and is crowded with information with regard to the subjects treated.

This is certainly a great departure from the usual course of the Department of Agriculture, and we note that it was made in compliance with a Congressional requirement. Congress will listen to the people, and the independence shown in the election last fall, as well as the earnest blows that have been driven home by UP-TO-DATE FARMING and other popular influences, could not fail of having due effect. The secretary of agriculture goes into detail as to marketing conditions and defective and costly distribution, and proposes the establishment within the department of a Division of Marketing. The mere proposal of such a thing is a broad step for the Department of Agriculture to take, and the establishment of such a division or bureau, such as we have many times suggested, might do much toward the solving of this great problem of the century. But enactments of Congress and other things done by the government are so often not what they seem, that it is but reasonable for the people to be cautious. There are interests, and powerful interests, too, that would rather the old system of marketing and distribution should continue, and it is the practice of such interests as these, when they find the people are determined to overthrow their selfish schemes, to apparently fall in line with the popular demand and go to Congress with a deceptive proposition to satisfy the people, but that perpetuates in some form their own nefarious purposes. In this class we may clearly place the land mortgage-bond scheme and the Lever agricultural extension bill, as well as many of the measures recently adopted with such a flourish and blowing of trumpets. We must not be deceived.

But the greatest step and most promising advance in these directions is made by the railroads. The great Frisco system is very emphatic. It has abolished the office of Industrial Commissioner and created that of Director of Development. To further its purpose of development, it proposes to locate picked agricultural specialists at different points throughout the Frisco's territory, "whose sole duty it will be to co-operate direct with the farmers." This system has not yet included farm marketing in its scheme of promotion, but after a personal interview with Mr. Frank Anderson, the Director of Development, we are sure it will do so. Besides, Mr. Yoakum, chairman of the Frisco System, has made an earnest study of the market side of farming, and has come to the conclusion, and boldly expresses it, that the greatest drawback to agriculture and the heaviest load upon consumers is in the ruinous and inexcusable marketing methods that prevail throughout the country.

The Great Southern railroads, however, step to the front in this matter with a boldness and emphasis that

(Continued on Page Five)

Glimpse of National Patronage

IT CAN scarcely be denied that in this country the political parties live upon the public patronage. The theory of the parties is that they have as their object and purpose the carrying out of certain great national policies different from each other, or the accomplishment of important things antagonized by others, and that the voters of the country rally to the party standards as they may favor or oppose these things. But these are ideal rather than real political parties. The voters form the parties largely on tradition and prejudice. Early in life they learned to regard this party or that one the best. In their souls there grew up great admiration for what they believed to be, or what in reality may have been, great party triumphs and accomplishments that were for the good of the country and its people. Thus they learned to venerate party names, and just as certainly have intense prejudices against all other party names. In this we do not think we are speaking uncomplimentary of the American people. It is a natural outgrowth of popular sovereignity, and if the party leaders were always pure and patriotic the very conditions spoken of would give permanency to our national policies and almost certainly insure good government.

But it is an undeniable fact that many leaders are selfish men, more devoted to their own interests than the country's, more selfish than patriotic. These men are in politics for what they hope to get out of it rather than for any good they may do the public. We shall not name them because we do not know them all, and that is a problem for the intelligent citicens themselves to solve. But this class of political leaders cluster around what is facetiously called "the pie counter." They are hunting for profitable jobs, and when they find them their efforts are directed to making them more profitable. This may be done by rendering as little service as possible and getting the greatest possible amount of pay. Or it may be done by serving special interests that pay well for the service entirely outside of official duties and contrary to the public good. "By their fruits ye shall know them."

We are glad to note that the possibilities of these evils are being reduced. The "pie counter" is still loaded with attractive "pies," but many of them have been placed out of reach of the political "grabber." Not counting military appointments, in which we include enlisted men and officers of the army and navy, there are 411,322 officers and employes of the United States government. Of these, 262,608 are under civil service regulations, and cannot be removed by a new President except for cause. A change of party, therefore, does not affect that number of official appointees. Of the remainder, 137,895 are in the classified service, and that removes them also from the affect of party change. Hence, out of the total number of 411,322, only 10,839 are subject to be turned out of office merely to give the place to a worker in the successful party. Of these appointments, 9,846 must be confirmed by the Senate before they can take their places; hence if the Senate is not in accord with the Executive, it ought to serve as a check on party political appointments and insure the appointment of able applicants only and that will render good public service.

The appointments which thus require Senate confirmation are divided among the different departments as follows: Department of State, 441; Treasury, 736; War (not counting the army), 6; Justice, 383; Postoffice, 7,953; Navy (excluding officers), 11; Interior, 272; Agriculture, 36; Commerce and Labor (excluding census officials), 28; Civil Service Commission, 4; Government Printing Office, 1; Interstate Commerce Commission, 7; Library of Congress, 1. Places which may be filled by the President independent of the Senate, are: State, 84; Justice, 896; Interior, 44; Commerce, 8; Civil Service Commission, 1. Thus, it appears, the "pie counter" has lost a great many of its attractions, a fact which ought to lead to less of selfishness and corruption in politics, and to better government.

Much of the Fault is in Distribution

IT DOES seem like the public, the people, both producers and consumers, can not much longer be victimized by the notoriously bad system of distribution that has so long prevailed in this country. So many great concerns are taking the matter up, in various ways and from various viewpoints it must be confessed, but all with a purpose of benefiting farmers and all the rest through better marketing as well as better farming, that results must come and come quickly. The doubtful element is the farmers themselves. After all, results necessarily depend much upon them. They should promptly organize so as to be in a position to benefit by every opportunity offered.

The Iowa Homestead says what we all know to be true, that Mr. B. F. Yoacum, chairman of the great Frisco railroad system, "Has made a study for years of the low prices that farmers receive for their products, while consumers pay very high prices." The Homestead quotes from World's Work the following article by Mr. Yoakum, and we reprint it to emphasize our teaching along these lines, as well as to encourage our readers and to stimulate farmers to definite action:

It cost (last year in the United States) $7,000,000,000 to distribute $6,000,000,000 worth of products from the farm to the producer.

New York's total bill for one year for eggs, coffee, rice, cabbage, onions, milk, potatoes, meat and poultry, was $464,147,000. Out of that the farmer received $274,289,000, or 59 per cent.; the railroads received $25,045,000, or about 5 1-2 per cent.; and the cost of selling and profits on the products was $164,813,000, or 35 1-2 per cent.

The following important items of daily food, what the farmers received for them, and what the consumer finally paid for them.

	Farmer Received	People Paid
Eggs	$17,238,000	$28,730,000
Cabbages	1,825,000	9,125,000
Milk	22,912,000	48,880,000
Potatoes	8,437,000	60,000,000

From my own investigation, made some time ago, I was persuaded that the system of distributing food in New York City was little short of a disgrace to the city. In August, there was published the digest of a report to be made by an independent committee acting under authority of the state. This preliminary report contained general figures that seem to bear out the impressions I gained from my own researches. The annual total food supply is estimated to cost $350,000,000 at the city terminals; that is, with all freight charges paid. The consumer is reckoned to pay $500,000,000. It is flatly stated that the difference is made up mostly of cost of handling, and not of profits. In fact, it is stated that the average small dealer, the corner grocer one hears so much about, does not make more than a bare living for himself and his family. It is roughly estimated that the simple inauguration of a fairly scientific method of marketing would save at least $60,000,000 a year in New York City, or about one-fifth of the total amount that the producer receives for his products.

Here, then, is one definite figure, which throws at least some light upon the question where that $7,000,000,000 goes. New York, in its marketing methods, is no worse than any other large city. I think it would mean that about 12 per cent. of the total amount the consumer pays is paid to make up for pure waste in marketing methods. That would be approximately $1,560,000,000 out of the $13,000,000,000—would be more than $1,500,000,000 thrown away in 1911.

My own figures on transportation cost show that the railroad freight earnings of the whole country on agricultural products are less than 4 per cent. of the total paid by the consumer, or approximately $495,000,000 on last year's production.

A Tobacco Quiz

Washington, Dec. 21.—The Congressional commission appointed during the last session of Congress to investigate the purchase of American-grown tobacco by foreign governments held a meeting recently. The commission was appointed in accordance with the demands of the farmers' unions for the purpose of making an effort to ascertain whether there is a combination among the foreign governments to hold down the price of American tobacco. The charge has been made that the European governments make competition impossible. The commission consists of Senator Martin of Virginia, chairman; Senators Lodge of Massachusetts and Brandegee of Connecticut, and Representatives Flood of Virginia, Stedman of North Carolina, and McKinley of Illinois.

Up and Down

THE United States district of labor, according to newspaper dispatches, has been investigating the cost of foodstuffs in thirty-nine American cities, and report that between August, 1911, and August, 1912, in Boston sirloin steak advanced 24 per cent.; in Buffalo, 19 per cent.; in Atlanta, 8 per cent.; in Chicago, 19 per cent., and in Birmingham, 15 per cent.

During the last ten years the following increase in prices is noted: Sugar, 6 per cent.; butter, 34 per cent.; milk, 35 per cent.; flour, 35 per cent.; potatoes, 46 per cent.; eggs, 47 per cent.; lard, 57 per cent.; hens, 59 per cent.; sirloin steak, 62 per cent.; ham, 63 per cent.; corn meal 64 per cent.; round steak, 86 per cent.; smoked bacon, 100 per cent., and pork chops, 105 per cent. It will be observed that some of these prices charged the consumers have doubled, and many of them have increased one-half and more.

Now, turning to the reports of the Secretary of Agriculture, we find that the prices paid the farmers for these very commodities have declined; not during every year of the ten, but specially during the last year, and always following years of big crops. We once more wish to emphasize that it is not what the farmers produce nor the prices paid the farmers that makes the prices consumers are required to pay. There is a power between that fixes both. Supply and demand, production and consumption, have nothing to do with it, and it does seem like there is an inefficiency of government somewhere that permits these things, so clearly and unmistakably shown. Many less causes have produced revolutions or hostile uprisings of the people in the older nations of history, and we urge that more attention be paid to these things in the United States. They vitally affect citizenship, and it is well for the authorities to take cognizance of them. The great efforts for the production of more stuff as a remedy, are as futile as the traditional shooting at the moon.

Mr. Dooley and the Big Ditch

"Good mahrnin', Hinnessey!"

"Good mahrnin," Mister Dooley. I wish ye a plisint an a rayspictable mahrnin'."

"Thanks, Hinnessey, I can shtand all th' free things that yez can hand over to me, though I must confiss that I'm feelin' mootch better than I did whin I wus buyin' Christmus prisints on tick so's to have enough tobaccy to roon me."

"It's a wonder, Mister Dooley, that ye don't go into politicks an' make an honist livin'."

"Politicks, did ye say, Hinnessey? Politicks? Why, mon, I'm th' feyther iv wahrd politicks, an' now see what we've got roonin' around th' shtreets iv Shecago as me offshpring—autymobeal bandits poppin' up at iv'ry cahrner an' yellin', 'Yer money er yer riputashun.' Wan iv these days wan iv thim bandits will be holdin' up somebody an' gittin' away with a dozin ginuine frish eggs. It's wrong, Hinnessey, I tell ye it's all wrong. Thim bandits should be out on th' fahrm producin' or sittin' with their honist laigs under an honist laborin' mon's tayble consumin'. By playin' th' bandit what are they doin', Hinnessey?"

"What, Mister Dooley?"

"Widenin' th' gap between th' producer an' th' consumer, an' it won't stand any widenin'. It's a raygular Niagry Gorge right now. Ye can't see acrost it. If th' producer an' th' consumer should meet wan anither on Shtate shtreet er Wall shtreet they wouldn't ricignize wan anither. They'd think th' ither fellow wus a cannybull an' they'd fly f'r aich ither's throats with their shillalies. Th' producer an' the consumer are as fur away fr'm aich ither as Dan fr'm Beershebay, er Takomy fr'm Hobokin. If they'd ivir boomp noses they'd be as mad as harnits, but they're not in th' boompin' bizness, Hinnessey, an' they nivir will boomp as long as they don't put on their spy glasses an' the producer crawl up on top iv his hay stack an' th' consumer crawl up on top iv his apartmint house an' thin shtart in lookin' f'r wan anither."

Editorial Paragraphs

Farmers and Banking—The editor of Farm and Fireside, referring to the farm banking scheme now before the people, says it is all very well for farmers to be told to co-operate in banking, but, as a matter of fact, we don't know how. It is all very well, too, to tell of the success the small farmers of Europe have made—but that doesn't help us any. We don't know how any more than we did before. You may tell us how an Eskimo turns in his canoe without spilling out, but we don't know how to do that, either. Managing co-operative banking may not be inherently difficult, and managing a kayak in a storm may be easy, but we think there is a knack to it which we should like to have mastered by someone on the spot and taught to us before we dash madly into either stunt.

Gold Not All Coined.—Early in January a million dollars in gold bars was shipped from this country to Europe. If we have more gold here than we need why are banks all the time issuing paper money? And who is shipping these gold bars, chunks of uncoined gold, out of the country? The banking concerns, of course. The people don't know very much about our monetary system, do they?

Surplus Money.—Not long ago the dispatches told us money was "pouring into New York in such enormous volume that the clerks in the large banks were working past their usual hours to handle the golden deluge." Currency was coming in from all directions, especially from the middle west and south. It had been out there to buy low-priced farm products, and now we suppose it is being gathered in to be loaned out on farm mortgages if that farm bond scheme goes into effect.

Citrus Crop Injured.—It is said that the severe freeze during the first week in January destroyed four-fifths of the orange and lemon crop of California, involving a loss to the growers of nearly thirty million dollars. This means fewer oranges and lemons, and, presumably, higher prices.

Wall Street in Control.—Leslie M. Shaw, a former secretary of the treasury, says: "If the Aldrich plan for currency reform is adopted, Wall street will be placed in absolute control of the country for a period of fifty years." Those who control the money of the country control the country, and we suppose that it what Mr. Shaw meant. The new administration has a fine opportunity to show its hand.

Help Them Both—An able writer on current events and conditions, speaking of marketing, says: The farmer is not paying too much, but the consumer is paying too much. I don't believe either the farmer or the final consumer is to blame. The trouble lies in our fearfully wasteful system of getting the two together. That's it exactly. Give us cheaper marketing and better distribution.

Here It Is Again—The Weekly Market Growers Journal says there is an over-production of lettuce in all parts of the country, but consumers are paying the usual retail prices. Lettuce sells in Florida at one cent a head and in the eastern cities at ten cents a head. The same old story. How would it do to give the growers three cents a head and sell to the consumers at five cents a head. Two cents a head ought to market it.

Up and Down.—Note in another article how prices of foodstuffs, we mean the prices charged the eaters, have increased during the last ten years, and also that the prices paid the farmers have gone up or down, depending upon large or short crops—much lower now than during other years. Farmers, do you read these things and realize what they mean to you? When prices are so high in the cities there will not, there cannot, be so much used, and that reduces the demand and the price for what you produce. These conditions ought to be knocked out in your interest as well as that of the consumers. Please read and study these things, and then do your share of knocking.

The Reading Farmer—Yes, the reading farmer is the one that understands these situations. It is not enough that Mr. A. reads, or Mr. B., or Mr. C. The reading should go clear down the alphabet. Every farmer should read, then when you meet you have something to talk about, and you learn how to act together. Wouldn't it be great if every farmer in the whole neighborhood, in the county and state, read these things in UP-TO-DATE? It is all right to read other papers, but others papers don't tell you these things of such vital interest. Help us to get your neighbors to read. The paper don't cost much, and it teaches facts that everybody ought to know, but that the other papers don't tell.

You and I—Something must be done. It is unjust to all that a few should control the money of the country that ought to be circulating for the benefit of all. It is unfair that farmers should be paid meager prices for their crops while the users of those crops who are not producers are compelled to pay prices so high that they can not afford to buy what they otherwise would. That cuts down the farmers' income and makes the others go hungry. It's not right. It must be changed. You can't do it; I can't do it. But YOU AND I can. All the you's and I's of the country. That's it Working together. Whenever you meet a neighbor let it be "You and I will do it," and then DO IT.

A Year's Reading.—We wish we could afford to give everybody a year's reading of UP-TO-DATE FARMING, not because we think we are so smart or that we have an ax to grind, but because we know we understand the worst situation that ever developed in this country, and we want to teach it to the whole people, for we know what the people demand unitedly will be granted. If we had a personal ax to grind, or a personal ambition to gratify, we would be inclined rather to pander to the powers that be instead of teaching the people the things those powers do not want the people to know. Now, a year's reading of UP-TO-DATE. We have made our terms as low as possible, and offer many attractive inducements. Help us to secure for every farmer in your neighborhood a year's reading of those startling facts.

Contest Over Express Rates

The Interstate Commerce Commission has issued an order requiring the express companies to show cause why the lower express rates fixed by the commission last spring should not go into effect on February 1, 1913. It was originally the intention of the commission to put the rates into effect October 15, but the time has been extended to February 1.

It is expected that the express companies will make a vigorous fight on the new schedules, probably contending that the Interstate Commerce Commission has exceeded its authority in making the rates. An important question is involved. If the courts hold that it is legal for the commission to prescribe express rates, undoubtedly it would be legal for the commission to prescribe freight rates for railroad and steamship lines.

A General Awakening

(Concluded from Page Three)

must not only win, but that must induce others to follow. We quote from a newspaper article what these lines propose to do and how they propose to do it. Their work is already under way:

President Finley of the Southwestern Railway Company, in announcing further railway co-operation for development of agriculture and horticulture, said: "Our Companies have arranged to appoint, January 1, four market agents to devote all of their time to collecting and giving information as to markets, methods of packing and shipping, etc., to producers who may seek their co-operation in the territory traversed by the lines of the Southern Railway, Alabama Great Southern, Blue Ridge, Cincinnati, New Orleans and Texas Pacific, Danville and Western, Georgia Southern and Florida, Mobile, Northern Alabama, Southern in Mississippi, Tallulah Falls, and Virginia and Southwestern. The four market agents, who will report to the traffic department of the companies, will be appointed as follows: J. M. Seahorn, with headquarters in Cincinnati, New Orleans and Texas Pacific general freight offices, Cincinnati; *E. L. Robison,* with headquarters in Mobile and Ohio general freight offices, Fullerton Building, St. Louis; M. M. Emmert, with headquarters in Southern Building, 1300 Pennsylvania avenue, Washington, D. C."

It now remains for the farmers to meet these great efforts on the common level of united action. If some one were to throw an apple to another who was really in need of the apple and was hungering for it, that person would be very foolish if he made no effort to catch it. Farmers must know that they have a part to play in the accomplishment of these great purposes, and so have the users of farm products. These two classes must get together and understand each other. In the first place, there must be a supply to meet every demand, and each must know where the other is. In fact, it is just as much the duty of the demand to find the supply as it is the duty of the supply to find the demand. This is the way to the solution of the problem, and it is this the railroads and others propose to help each class to do. In this is the necessity for organization. Farmers scattered as they are over a township, a county, or a district, are ill-prepared to act in unison, or to extend a helping hand to the hands so generously extended to them. If organized, each hand could clasp the other in mutual confidence, benefit and aid, and the actors in the drama would themselves be amazed at the result. Therefore, every neighborhood along these lines of railroad should promptly organize, so as to bring themselves in touch with the roads not only to benefit by the efforts put forth, but also to aid in them, the prime essential being first to have an effective plan that all can unite upon and that cannot fail

Smile Awhile

Help Themselves

Minister—Are your children being brought up to help themselves?

Mrs. Biff—I should say they are. I can't keep a cake or a glass of jam a half a day.

Using the Thermometer

Doctor—Are you careful to watch the thermometer as I told you?

Nurse—Indeed I am, sir; and whenever it gets above 70, I hang it out of doors till it cools down.

Love Sickness

"Your wife seems wonderfully attached to you, Thomas," kindly observed the mistress to her gardener.

"Yes, ma'am; ain't it sickenin'," was the reply.

Sure Sign

Minister—Is your poor father any better, my dear?

Little Girl—Yes, sir, he's so much better mother has quit prayin' for him and gone to scoldin' him again."

The Tramp Idea

Lady, to Weary Willie—They tell me they no longer allow the use of public towels.

Weary Willie—Good. Now let them do away with soap and water.

Why He was There

Mistress—Why, Sam, is it possible you are in jail? What are you here for?

Sam—For stealin' 'taters, ma'am.

Mistress—Well, I am surprised.

Sam—So was I, ma'am, or they wouldn't a got me.

It Was Soft

"Now, Tommy, you've been fighting again. Don't you know 'A soft answer turneth away wrath?'"

"Yes, mama; I hit him with mud, and he turned away and run like thunder."

The Next Best Thing

Little George had been very naughty, and his mother told him he must go into the closet and pray to be forgiven and made a better boy. He went and solemnly prayer:

"Dear God, forgive me for being bad, and make me a better boy; but if that is too hard to do, please make mama easier satisfied."

The Goods They Sell

Neighbor, to little boy in next yard.—Hello, Frank, have you got a new suit?

"No, sir, it is papa's old one."

"Did your mana cut it down and make it over?"

"No, sir, she just had it washed."

She Knew His Ability

"Clara, I'd rather you would not go sailing with that young man from Springfield. I'm afraid he don't know a thing about a boat."

"Yes he does, mama; he showed me a recommendation from the people he used to work for, and they say he is a splendid salesman."

The Danger of It

"Papa, is it true that cows have more than one stomach?"

"Yes, my son."

"Dear me! Suppose they'd get too much pie in all of 'em at once! Wouldn't they roll and tumble?"

A Bore's Make-up

She—It is the amount of talking a man does that makes him a bore?

He—No; it's the amount he doesn't say while he talks.

Crop Prospects *and* Market Reports

Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

THE grain markets hold fairly well the strength shown in all lines since the opening of the year. In wheat, European war talk, dry weather and the statistical position all served to hold prices fairly firm this year.

Later information as to the effects of the freeze in California orange groves is a trifle more encouraging though it is conceded that considerable damage has been done in some sections. A reduced rate on orange shipments has been asked of the railroads to facilitate marketing. It is felt, in addition, that southern California's agricultural and other interests are so diversified that the effect will not be so great as it might have proved in earlier years. Copious rains have put California soil, as a whole, in fine condition, and this is expected to be favorable to hay, grain and vegetables. In the north Pacific and intermountain region the snowfall has been benefited. There is a notable scarcity of snow in the surplus crop growing sections of the west, and thence eastward to the coast. Texas crops have been benefited by rains, and the east is well provided with moisture, but the west needs more than it has so far obtained.

Wheat, including flour exports from the United States and Canada, for the week ending January 16, as reported by telegraph to Bradstreet's, aggregate 6,128,460 bushels, against 5,661,944 bushels last week and 2,941,579 bushels this week last year. For the twenty-nine weeks ending January 16, exports are 138,440,730 bushels, against 93,464,104 bushels in the corresponding period last year. Corn exports for the week are 1,600,726 bushels, against 656,190 bushels last week and 1,462,388 bushels in 1912. For the twenty-nine weeks ending January 16, corn exports are 6,340,331 bushels, against 17,290,512 bushels last year.

The average of prices received by producers of the United States for staple crops increased .5 per cent. from December 1 to January 1, which compares with an increase of .6 per cent. in the same period a year ago and an average increase of 1.5 per cent. during December of the past five years. On January 1 prices of staple crops averaged about 17.2 per cent. lower than on like date of 1912, 6.5 per cent. lower than in 1911, 17.3 per cent lower than 1910, 5.9 per cent. lower than in 1909, and 7.7 per cent lower than in 1908 on like date. The average prices received by producers of the United States for articles named on dates indicated according to reports made by correspondents of the Bureau of Statistics of the United States Department of Agriculture, were as follows:

	Jan. 1 1913	Jan. 1 1912	Jan. 1 1911
Flaxseed, bush	$1.062	$1.871	$2.211
Potatoes, bush	.506	.845	.541
Hay, ton	11.860	14.850	12.240
Cotton, lb.	.122	.084	.144
Butter, lb.	.284	.281	.278
Chickens, lb.	.107	.098	.105
Eggs, doz.	.268	.295	.304

	Dec. 15 1912	Dec. 15 1911	Dec 15 1910
Veal calves, 100 lbs.	$6.88	$5.98	$6.38
Sheep, 100 lbs.	4.21	3.71	4.54
Lamb, 100 lbs.	5.70	4.93	5.60
Cabbage, 100 lbs.	1.15	1.83	1.49
Apples, bush	.73	.86	1.00
Beans, bush	2.30	2.42	2.20
Onions, bush	.84	1.13	.99
Clover seed, bush	9.00	10.62	7.94
Timothy seed, bush.	1.79	6.72	4.11
Alfalfa seed, bush	7.86	....	....
Wool, unwashed, lb.	.186	.155	.178
Hops, lb.	.178	.425	.146
Peanuts, lb.	.046	.044	....

The world's visible supply of wheat is rising gradually, as shown by the following figures, beginning December 14, 1912, and ending January 11, 1913, the latest figures available:

December 14, 198,910,000; December 21, 201,620,000; December 28, 200,435,000; January 4, 200,213,000; January 11, 203,465,000.

Canadian crop returns for 1912 show that upon a total area under field crops of 32,474,000 acres, a harvest was reaped the value of which, calculated at average local market prices, aggregated $509,437,000. Following are the areas, production and values of four leading crops:

	Area, acres	Production	Values
All wheat	9,758,400	199,236 0	$123,522,000
Fall wheat	781,000	16,396,000	13,735,000
Spring wheat	8,977,400	182,840 000	109,787,000
Oats	9,216,000	361,783,000	116,996,000
Barley	1,415,200	44,014,000	20,405,000
Flaxseed	1,677,800	21,681,000	19,626,000

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on January 11, 1913, with comparisons, are shown in the following table: (The sign —before figures means decrease, X indicates increase.)

	Jan. 11, 1912 Bushels	Change from 2 wks. before Bushels	Change same period last year. Bu.	Change from a year before Bushels	Change from 2 yrs. before Bushels
WHEAT	73,838,000	X 3,151,000	—2,387,000	X 19,314,000	X 27,441,000
CORN	9,107,000	X 2,212,000	X 2,080,000	— 3,142,000	X 5,825,000
OATS	13,002,000	X 284,000	—7,978,000	—10,908,000	X 7,769,000
BARLEY	6,557,000	X 522,000	X 2,620,000	X 3,920,000	X 2,019,000

The visible supply of wheat in Canada on the same date was 48,805,000 bushels. This is 1,576,000 bushels more than two weeks before and 2,825,000 bushels more than a year before. The visible supply of oats was 3,353,000 bushels on the same date, which is 210,000 more than two weeks before and 3,192,000 bushels more than a year ago.

CLOSING PRICES OF CASH GRAIN

Cash grain closed in the leading markets on January 11, two weeks before and a year before, as follows:

WHEAT, No. 2 RED

	Jan. 11	2 wks. before	A Yr. before
Chicago	1.12 @1.15	1.10 @1.10⅛	.98
St. Louis	1.09 @1.14	1.09½@1.10	1.00
Kansas City	.87½@ .96½	1.03 @1.06½	1.00
Cincinnati	1.12 @1.14	1.12 @1.14	1.02
New York	1.09 @1.10	1.07 @1.08	1.01

Minneapolis—Spring wheat, No. 1 hard, 88½; No. 1 northern, 87½@88. Two weeks before, 84¾ and 82¾@84¼, respectively. A year before, $1.06 and $1.05⅝.

CORN NO. 2 WHITE

Chicago	49½@50	46½@47	64
St. Louis	49	49	67½
Kansas City	49½@50	47 @48	69½
Cincinnati	54 @55	51½	69
New York	56½	54½	71¾

OATS NO. 2 WHITE

Chicago	34 @35½	34 @34½	51
St. Louis	33½@34	35 @35½	52
Kansas City	34¾@35½	34 @35	52½
Cincinnati	37 @37½	66 @36½	52½
New York	38½@39	39½	56

FUTURE GRAIN PRICES

Chicago grain futures closed on January 21 and two weeks before as follows:

WHEAT—May, 93⅞c; July, 90½c; September, 89½c. Two weeks before, 91⅜c, 89¼c and 88¼c, respectively.

CORN—May, 52c; July 52⅞c; September, 53½c. Two weeks before, 48⅞c; July 7890$ MFDYW MF Two weeks before, 48⅞c, 49⅞c and 50¾c.

OATS—May, 34½c; July, 34¼c; September, 34⅜c. Two weeks before, 33c, 33½c, and 32⅞c, respectively.

ADVICE—We predict higher prices for wheat, corn and oats. We advise against selling any of these crops unless it is winter wheat, which may be sold. We recommend correspondence with millers listed in the Directory of the Farmers Society of Equity, as mill in the Central and Eastern states are paying premiums for good winter wheat. The Directory is furnished to all members of the Farmers Society of Equity.

COTTON

New York, January 21.—Middling upland, 12.90c; middling gulf, 13.15c per pound.

The price of cotton is 40c per hundred weight lower than two weeks before. It is $3.55 a hundred weikht higher than a year before.

ADVICE—We do not advise storing cotton now to wait for the minimum price of 15 cents, but we advise holding if it can be held on the farm without expense. In marketing be careful to get all that the market affords. Dealers listed in the Farmers Society of Equity Directory will secure the top price without the intervention of unnecessary handlers.

LIVE STOCK

Indianapolis Stock Market, January 21, 1913

CATTLE—Range of day's paying prices for steers ..... $6.25@6.75
Range of day's quotations for steers .... 6.00@8.50
Good to choice steers, 1,300 lbs., and upwards ..... 7.75@8.50
Good to medium steers, 900 to 1,100 lbs. 6.50@7.25
HOGS—Range of day's paying prices ..... 5.50@7.80
Range of day's quotations ..... 6.00@7.85
Best heavies, 210 lbs., and up ..... 7.75@7.80
Common to choice lights, 130 lbs., to 230 lbs. ..... 7.75@7.85

The price of steers is from 25c to 50c a hundredweight lower than two weeks before. The price of hogs has fallen from 30 to 50 cents per hundredweight.

CHICAGO PRODUCE MARKET

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last Week	Last Year
Monday	46	42	48
Tuesday	40	43	64
Wednesday	28	*	96
Thursday	34	93	126
Friday	43	50	40
Saturday	57	63	113
Total, 6 days	248	291	492

*Holiday.

Market was quiet and steady. Demand moderate, but there was not much stock offered and prices remained without material change.

Sales reported on Monday, Jan. 20, were: Wisconsin, round whites, in bulk—2 cars at 45c, 2 cars at 46c, 3 cars at 47c, 2 cars at 48c, 2 cars at 49c, 4 cars at 50c.

Mixed: 1 car at 45c, 2 cars at 47c, 2 cars at 48c, 3 cars at 50c.

Per bu., bulk or sacked, Wisconsin, Burbanks, Kings or Rurals, ordinary to fancy.....44@50c
Fancy Russets, possibly a shade over.
Minnesota, round, white, bulk or sacked ....44@50c
Russetts, in sacks .....47@52c

ADVICE—More liberal receipts took the edge off the market, as always, and prices dropped slightly. A heavy shipment always sends prices toward the bottom. Buyers never fail to take full advantage of a full market. Let your potatoes go gradually. There can be no doubt but that there are large supplies yet in the hands of the producers, to be marketed. If these are held back, and then "dumped" in the early spring, prices will go still lower. Careful marketing will hold the price steady. We advise our members to market now in limited quantities at a time. Feed the market steadily. Avoid congestion.

NEW POTATOES—Demand is moderate for Bermudas, and is better for No. 1 than No. 2. Supply equal to the demand.
Per barrel, No. 1 ..... $7.00
No. 2 ..... 6.00
The price of new potatoes is slightly lower than two weeks before.

SWEET POTATOES—Business in sweets is slow. Market abundantly supplied. Demand is not normally brisk. Only prime quality finds ready sale at figures quoted below.
Barrels, Illinois, good to choice ..... $3.00@3.50
No. 2 ..... 1.50@2.00
Hampers, Jerseys ..... 1.35@1.40
Delaware ..... 1.00@1.25
Illinois, choice ..... 1.00@ .
Some fancy brands shade over.
The price of sweet potatoes is 50c a barrel lower than two weeks before.

ADVICE—We advise selling sweet potatoes gradually, being sure to get all that the final market will pay. Do not make liberal shipments on a falling market.

BEANS—A slight advance noted, following moderate receipts. Moderate business doing in choice hand-picked pea beans, and stock of really fine quality is in steady demand at slightly higher prices. Offerings are ample for immediate requirements.
Pea Beans—
Hand-picked, choice ..... $2.45@2.50
Prime ..... 2.35@2.40
Stock faulty ..... 2.00@2.25
Mediums nominally about same as pea beans.
Red Kidneys, choice ..... $2.25@2.35
White Kidneys ..... 2.85@3.00
Brown Swedish, long, nominal ..... 1.75@2.00
Limas, per 100 lbs. ..... 6.60@6.75

The price of pea beans is 10c a bushel higher than two weeks before. The price of Red Kidneys and White Kidneys is unchanged. Brown Swedish and Limas are higher.

ADVICE—Whenever possible, ship your beans direct to city markets; follow quotations closely and be sure to get all that your beans are worth. Some beans command much better prices than others on the market. Growers will do well to put in some of their spare time in the winter to putting their beans in first class condition. Hand-picked are always at a premium over prime beans.

HAY—Receipts, 1,134 tons. Choice Timothy and Prairie hay steady. Demand fair and offerings small. Low and medium grades dull. Supply large and demand light.
Choice Timothy Hay ..... $15.00@16.00
No. 1 Timothy ..... 13.00@14.00
No. 2 Timothy ..... 11.50@13.00
No. 3 Timothy ..... 9.00@11.00
Kansas and Oklahoma Prairie, choice .. 13.50@14.50
Hay is practically at the same figure quoted in the previous issue.
A year ago the price of timothy hay was $23@24.

ADVICE—Hay should be held back and the glutted markets relieved.

STRAW—Oat straw at $6.50@7.50. Wheat straw $6.50@7.50.
Straw is unchanged from two weeks before.
BROOMCORN—No change yet. The market remains quiet.
Per ton, Illinois, no nice quality offered $50.00@100.00
Oklamoha ..... 50.00@ 75.00

There is much low grade broom corn in the market this year, and low prices are being paid for it. However, the prices above quoted do not reveal the price that choice broom corn will command if the top of the market is realized. Sales of choice Illinois broom corn were made recently at $200 a ton.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week. Cases	Last week. Cases	Last Year. Cases
Monday	2,760	2,801	762
Tuesday	5,851	4,776	2,127
Wednesday	5,671	...†	878
Thursday	4,798	3,352	980
Friday	5,461	6,218	1,174
Saturday	4,709	6,985	1,417
Total	29,250	21,132	7,338

Receipts, April 1, 1912, to January 11, 1913, 2,841,775 cases.

Receipts, April 1, 1911, to January 20, 1912, 2,465,881 cases.

Receipts, April 1, 1910, to January 21, 1910, 2,840,436 cases.

Eggs ruled firmer, with slight advance in prices. Demand principally for fresh laid stock. Mixed lots sell at a wide and variable range. Most lots received are not 35 per cent. fresh, though coming from country shippers. Quality counts.

Miscellaneous lots—By this is meant eggs as they arrive from the country—cover a wide range. The top figures only obtainable for eggs which run better than Firsts—possibly over 60 per cent. of new laid 18@23c depending on quality.

Ordinary Firsts quotable at 18@21c.

"Firsts" quotably 23@24c per dozen.

Dirties—Fresh quotably 17c a dozen.

Checks—Fresh quotably 14c a dozen.

Refrigerator eggs met with a moderate demand. April Firsts quotably 18c.

ADVICE—Much higher prices can be obtained in some of the markets for fresh eggs. For instance, in Indianapolis, they range around 25@33c a dozen. Of course, we recommend marketing once or twice a week while fresh.

APPLES

There is slightly stronger tone in the apple market, but prices are not changed in the wholesale transactions. Retail prices have advanced slightly. The looked for improvement in the apple situation has not yet come. Western box apples that sell for $1.75 a box to the retail grocers in Indianapolis, are sold at from $2.50 to $2.75 by the box to the consumers. In smaller quantities they retail at 35 cents a dozen, or 3 for 10 cents. At these latter figures a box sells for from $6 to $8 a box.

Trade Reports

(From Bradstreets)

Canada—Extreme cold weather in the northwest hampers trade. Money is firm, with an undertone indicating lower rates to come. Real estate firm in tone but dull in action. Farmers generally holding grain for better prices.

New York City—Wholesale grocers report business satisfactory, but not lively. Wheat flour has been more active. Butter prices have dropped 3 cents per pound since January 1, without increasing demand. Cheese prices are steady. Receipts of eggs larger than usual, and price lower by 2 cents on the dozen. Hides and skins return to high level.

Boston—Wool buying is light since the first of the year. Leaf tobacco merchants report increased demand for leaf.

Providence—Wool quiet, with stocks low and prices firm. Tobacco trade qciet. There is still much inquiry for Connecticut binders.

Buffalo—The live stock market is active, with prices firm.

Chicago—Eggs, potatoes, poultry, cattle, hogs and lambs are lower. Sheep are higher. Receipts of cattle and sheep increased; hogs decreased. Money is easy.

Cincinnati—Business quiet, owing to floods and rainy season.

Louisville—High water throws hundreds out of employment. Retail trade quiet in all lines.

Kansas City—Trade shows improvement. Collections good, money in demand.

St. Louis—Retail trade is normal. Groceries in demand. Provisions improving with prices stronger. The supply of and demand for vegetables is increasing. High prices curtail demand for poultry. Heavy supplies of butter and eggs for poultry. Heavy supplies of butter and eggs cause a weak market. Cattle and hogs easier. Lambs lower.

Minneapolis—Dealers in farm machinery are booking large orders for spring delivery. Manufacturers starting up with sufficient orders ahead for the present. Flour millers are still running to full capacity, with orders ahead to last for many weeks.

Omaha—Jobbers report a good trade. Hardware and groceries in good demand. More snow is needed for moisture.

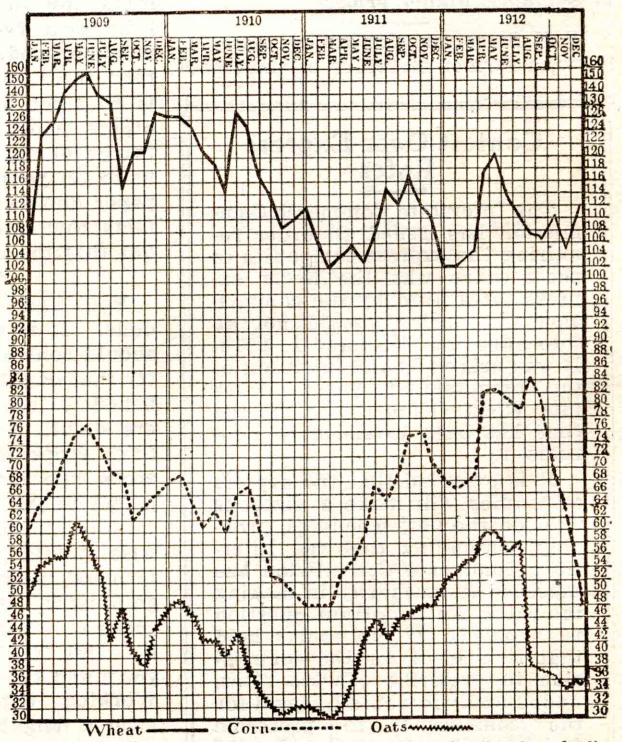
Baltimore—Trade shows unusual activity. Maryland leaf tobacco is quiet. Steady and more active demand for canned goods. Banks well supplied with funds.

New Orleans—Fair weather conditions enable planters to go forward with planting. A larger cotton acreage is predicted.

Dallas (Texas)—Rains throughout this section have beens of great benefit to the small grain crop.

Portland (Oregon)—Grain trade is in small volume, caused by lack of offerings. Demand for wheat strong at advanced prices, but farmers are still bullish. Oats and barley are quiet. Hops in good demand, trade small, growers not inclined to sell at present prices. Hogs sufficient in supply to meet the demand.

Tacoma (Washington)—Wholesale dealers report better business than at this time last year.



This chart shows the highest monthly cash price for the three leading grains at Chicago, for a period. 1909 to December, 1912, inclusive. The figures on right and left margins are prices in cents. The lowest prices for December were as follows: Wheat, 98c; corn, 46c and oats, 33½c. This chart will be continued.

In and About the Fields

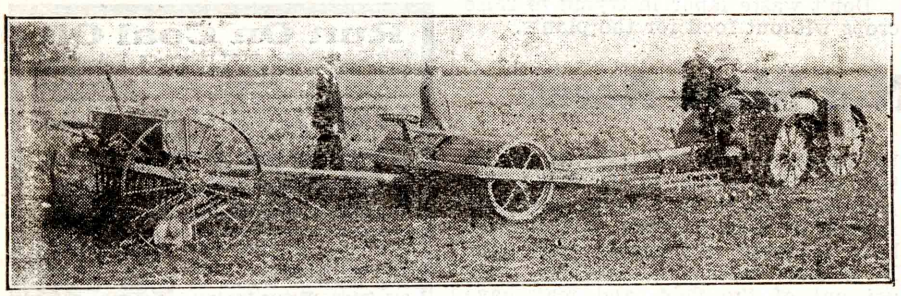
Production and Marketing

THE FARMER AS HE IS

THE farmer is no longer a "hayseed," and the paper which shows him off as a ridiculous personage with uncouth actions and clothed as a tramp is a "back number." Farming is now recognized as one of the business enterprises of the world, and the farmer as being entitled to a position by the side of progressive people. Of course these are reading farmers, and they are the ones that have brought farmers to the front. There are still some tillers of the soil who remain in the old ruts. They do not read, are inclined to take things as they come, are bringing up their families surrounded by conditions years out of date, and are really a hindrance of the progressive ideas now so dominant among reading people. We are sorry for non-progressive people no matter of what class, and we certainly regret that any farmers hold back in an advancing period like this. We know no remedy except to induce them to become reading farmers. This must depend largely upon their neighbors who know them personally and meet them in the ordinary affairs of life. We believe if they had it they would become readers of UP-TO-DATE FARMING. We make the ideas of the new system so plain and so emphatically tell of the wrongs farmers have so long borne, that they could not but become interested. We have still another hope in such families. The young people growing up in such homes around them. They will gladly read if they have a chance, and when they get interested in what they read they will interest their parents. This is the surest way out, and it is the easiest way to overcome the obstacles that block agricultural progress.

But it was not our purpose to solicit subscriptions in this article, but rather to congratulate farmers who read. In almost every section of the country now the reading farmers outnumber those who do not read, and they are reading the things that most vitally concern them. It is no wonder that there is a spirit of progress in the rural districts, and it is no wonder that the other folks are taking notice. Reading farmers know things they never dreamed of before. And they will know more. The half has not been told, and we propose to tell it no matter who may be offended.

Our hope centers in the reading farmers, and our supreme desire is to get all to read that all may know and act upon the truth.



THE IRON HORSE IS COMING INTO MORE GENERAL USE EVERY DAY

SOW CLOVER

WE ALWAYS feel safe in advising farmers to sow clover; and in clover we include all leguminous crops. We make special mention of clover because its area of growth is more general. Many who are very successful growers of clover sow the seed in February or early in March, where winter wheat was sown last fall. We have found some difficulty in having the seed so sown to get covered. Light freezing and thawing is largely depended upon for that purpose, though some give the wheat a light harrowing after the clover seed has been sown, and claim that the wheat itself is benefited thereby. For that to be the result it occurs to us the ground should be in very fine condition.

We have had good success in sowing clover with oats. In that case the ground should be a little more carefully prepared than is usually done for oats alone.

The only question about sowing clover is the cost of the seed. Clover seed is high, it is true, but the chances for gain are so great that some risk is justifiable. Clover hay has become a profitable commercial commodity besides being one of the best feeds to use on the farm. Then the high price of the seed and the ready demand for it makes the saving of the seed a money-making proposition. To all this add the benefit to the land. This in reality is the most attractive part of it. Land that produces clover can not become exhausted, and it is almost impossible to keep up the fertility of soil without producing clover or some leguminous crop.

Fables for Farmers

Once upon a time there was a man who had money (remember this is only a fable). Never having had money before, and not knowing how to use it, he sought the advice of a wise friend.

"Oh, friend," he said, pointing to bushel baskets full of silver and paper money, "what shall I do with all this?"

"Bank it," his friend advised him, "and it will grow into much more money for you; let it grow interest for you." Thereupon the friend's advice was quickly followed (remember, this is only a fable; advice is generally disregarded).

But soon he began to draw out little sums of this money and didn't put any more back in the bank upon which the interest was to grow. And then one day his check was refused—he didn't have any more money left.

That's all there is to this fable except the moral.

And the moral reads, "If you draw upon your bank account and don't put anything back upon which the interest can grow and from which you are to get your sustenance, you are in the same plight when you take the sustenance out of your soil and don't replace it by proper fertilization."—Henry G. Bell, Agronomist, Middle West Soil Improvement Committee.

(And we will just add, that it is necessary to have money in the bank with which to improve the soil.—Ed.)

A full grown rat will consume a dollar's worth of grain and vegetables in the course of a year and oftentimes destroy or ruin in the same period property of many times the amount mentioned. It is because of this fact that the rat campaig nis a vital and important one and that every one who can should have a hand in it.

Did Not Want to Excel Her Parents

Mother, to Minister—Yes, we are going to have Lucy highly educated.

Lucy, breaking into the conversation—No, mother, I don't want to be highly educated. I want to be just like you and papa.

PUZZLE

Name the ten Advertisers Represented below

Just a little of your time may win for you the first prize in this interesting contest

EXPLANATION

We reproduce above portions of ten advertisements in this issue. For example: The first one is from the advertisement of Domestic Sewing Machine Co., The others you are to find.

CONDITIONS

In addition to the solution of this puzzle it is a condition that each contestant, in order to have his answer considered, shall write a special letter, telling us which advertisement he (or she) likes best in February 1st number, and why. In case of a tie, prizes will be awarded to the ones writing the best letters. Answers to this contest must be written entirely separate from orders or letters on other subjects, otherwise they will not be considered.

Contest open to every reader living outside of Indianapolis and Marion County, Ind.

All answers to be considered must be received before February 1.

We can not answer letters regarding this contest; the conditions given must be complied with.

PRIZES

First prize, to correct answer and neatest and best letter $3.00

Second prize 2.00

Third prize 1.00

A present will be given to each of the next 10 sending correct answers and neatest and best letters.

ANSWERS TO JANUARY IST PUZZLE

Crofts and Reed Company
Manson Campbell Company
Hercules Manufacturing Company
American Separator Compony
D. M. Ferry and Company
Up-to-Date Manufacturing Company
Hunter Watch Company
The Munybak Company
Belle City Incubator Company
The American Seeding Machine Company

PRIZE WINNERS

1st Prize, $3—Alice Larrabee, Sleepy Eye, Minn.
2nd Prize, $2—Chauncey Velten, Gilliam, Mo.
3rd Prize, $1—John H. Blythe, Jr., Cloverport, Ky.
Honorable Mention, Beautiful Set of Post Cards—Ray S. Kellog, Ohio; Earl Kessler, Ohio; Chas. W. Reed, Ohio; Bessie Evans, Va.; Laura Whetzel, Va.; Mrs. Jessie Myers, Pa.; Chas. Johannsen, Fla.; Reuben T. Price, Ky.; Grace Barber, Ohio; John W. Houser, Mo.

Address PUZZLE EDITOR, UP-TO-DATE FARMING, INDIANAPOLIS, IND.

Winners of February 1 Puzzle announced March 1. Watch for another Puzzling Puzzle Feb. 15

SAVE THE DEALERS' PROFIT

They may tell you that they can sell you a gasoline engine for as low prices as we can—**but you know better.** We are manufacturers and sell at wholesale **direct to you.** Get our factory, **money-saving** prices on the best engine built—the standard engine of America for 43 years. Every Witte Engine is run under a full load for six whole days in our factory, insuring absolute perfection in every detail.

THE WITTE ENGINE has been made and sold by one firm 43 years at only one small profit. It has **every improvement up-to-date;** will run on every grade of fuel and will save you money on gasoline. Come to the Witte factory if you can, and see your engine made and tested—you will be surprised at our factory, our product, our **5-Year Guarantee,** and our **Money-Saving Offer.** If you can't come, **Write at once for Free Trial Proposition and Catalog.** Made in 64 styles and sizes. In writing state size and style wanted. Address

1935 Oakland Ave., **WITTE IRON WORKS CO.** KANSAS CITY, MO.

Phelps' FREE BUGGY BOOK

Write today *sure* for Phelps' new book on Split Hickory Vehicles. Shows largest selection in America—over 140—full and complete line of harness styles. 167,000 regular customers already. Phelps ships *direct* to you from his mammoth factories—no dealers' profits. You ought to have this fine book whether you buy now or later. It is buggy authority. Then too—

PHELPS Guarantees to Save You $25 to $40
Gives You a 30 Days' Free Road Test

Don't buy a buggy without Phelps book and low prices. Auto Seat Buggies, Runabouts, Surreys, Carts, Carriages, Spring Wagons, etc.—all of the famous *genuine* Split Hickory construction. Write immediately and get free book by return mail. Phelps pays the postage, too.

Address H. C. PHELPS, President

H. C. PHELPS The Ohio Carriage Mfg. Co., Station 99 Columbus, O. 2 Years Guarantee

Elkhart Vehicles and Harness

have a world-wide reputation for high quality and our prices have made them famous.

FORTY YEARS'

experience selling to the consumer means success.

We ship for examination, **guaranteeing** safe delivery, satisfaction and to save you money.

Catalog shows all styles of pleasure vehicles and harness, pony vehicles and harness, spring wagons, delivery wagons and harness.

May we send you large catalog?

We also make the "Pratt" Automobiles.

Use KEROSENE Engine Free!

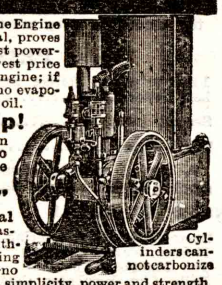
Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.

Gasoline Going Up!

Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline.

Amazing "DETROIT"

—only engine running on coal oil successfully; uses alcohol, gasoline and benzine, too. Starts without cranking. Only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low Introductory price. Write! (138)



Cylinders cannot carbonize

Detroit Engine Works, 396 Bellevue Ave., Detroit, Mich.

Milne's Stump and Tree Puller

clears a two-acre circle with one sitting—pulls stumps, green trees and hedges quick and easy. **You can pull trees faster than you can cut them down,** leaving the land clear for cultivation.

All Steel Combination Stump Puller

Unbreakable—handy—rapid—powerful. The only machine on the market that can be set either stump-anchored or self-anchored. Double, Triple and Quadruple Attachments. Also Rotary Power Attachment for sawing, grinding, etc. Write for free catalogue.

MILNE MFG. CO., 835 Ninth St., Monmouth, Ill.

ROBIN JONES ROCK PHOSPHATE

is the fine ground raw phosphate rock (floats). A natural fertilizer for all soils deficient in phosphorous. Recommended by prominent agricultural authorities, and used by progressive farmers. We sell direct from our mines to the consumer. Write for our booklet N-2, and cost of our rock phosphate delivered at your railroad station.

Robin Jones Phosphate Co.
Nashville, Tenn.

Bales 1/3 More

J. A. Tudor, Edwardsport, Ind., says:
"The longer I run **Alligator Box Presses** the better I like them. They are *lightest running*, most durable, and have larger feed hole. Have tried others, but the **Alligator** bales one-third more."

Spencer Press is guaranteed to do all catalog claims or no sale. Rubs off green bark less than Perpetual. Write today for *free* catalog, which gives plain figures why Spencer Press is most profitable. *Ten days free trial.*

Feeding the Crops

NOTHING can grow unless it has something to build its substance of. This is as true of plants as it is of animals.

The farmer that sows or plants the seed depending entirely upon the soil for growth and perfection in maturity sometimes meets with disappointment. Nature was kind and in most soils originally provided the elements of plant food, but these supplies are not inexhaustible, and crop after crop will absorb the supply and it will tell the farmer so by annually diminishing yields. The wise farmer understands this emphatic language, and makes arrangements to replenish the exhausted supply.

Generally speaking, the elements most needed are nitrogen, phosphorus and potash. The soil where the plant roots are expected to get their supply must also have humus, decayed organic matter, as the agency for serving the food, and there must be moisture, for the plants cannot masticate their food and must, therefore, take it in the form of a delicate soup. But it must not be too liquid—the ground must not be too wet.

In most soils the element most likely to be needed is nitrogen, and the natural supply of nitrogen is in the air. What the impaired or exhausted soil needs, therefore, is aeration, by which we mean a condition that will allow the air to enter and, in a measure, circulate through it. This suggests deep plowing, deep pulverization, and if the plowing be done in the fall or winter so that the broken ground may have the benefit of "weathering," freezing and thawing, etc., the aeration will be more perfect, and the weathering will make the phosphorous and potash already in the soil more available for plant food. There is one thing to note in the deep plowing if it be much deeper than the ground has usually been broken. The best soil is at the surface, and if this be turned under deeply and left there the seed will be planted in the poorer under soil, and the result will be unsatisfactory at least for the first year.

Next to commend itself as a means of getting nitrogen from the air, and more efficient than the other, is to grow leguminous crops—the clovers, alfalfa, field or cow peas, the vetches, and other similar crops. If these be turned under the benefits are vastly multiplied as the upper growths decay and form humus. Thus may apparently exhausted fields be made in a short time more productive than new ground.

Barnyard manure comes in as a great helper in this process. Distribute it very evenly, and if just before the ground is plowed it is all the better. But don't wait for that. Haul it out and scatter it on the ground. Some farmers used to haul out the manure as it accumulattdd in the winter and unload it in piles to be spread later. Don't do that. Spread it as it is unloaded, and spread it evenly. The whole field will get the benefit of it then. It may leach, but the leaching will sink into all parts of the ground.

Don't waste labor in trying to raise crops without food for the plants.

More Corn But Not More Acres

FARMERS are too much inclined to over-crop themselves. We noticed many instances of it last year. Really good farmers made a few additions to their working facilities and decided they could materially increase their acreage. The result was almost invariably bad tillage, low yields and loss. We do not blame people for wanting to do all they can, but it is a mistake to plan beyond one's capacity.

We believe in making the land do its best—in intensive farming, if you prefer to call it that. This does not run to the idea of doubling crops as is advocated by so many. We know that too much of anything may be produced; but it is entirely within the province of progressive and prudent farming to make the acres yield more and then cultivate fewer acres. It is more profitable to raise a twenty-acre crop on fifteen acres than to raise it on twenty acres. If that is done the full crop may be produced and five acres saved for something else, or for pasture. If the usual crop is forty acres, or sixty, or one hundred, the same rule will apply except that more land will be saved.

We believe this is easy to do with the corn crop. Give the fewer acres a better chance. Manure more, fertilize, work better before planting, plant the best seed obtainable and take pains with the planting so that a stalk will grow every place where one should, then cultivate to perfection. We are not advocating a saving of work so much as a saving of land. Give the fifteen acres as much work before and after the planting as you would give the twenty, or the thirty as much as you would give the forty, and then get as much corn as you would get from the larger acreage, or more.

Good seed and a good stand is the thing to be particularly careful about. Every missing stalk is a waste of land and culture—the loss of an ear of corn that was earned by the season's toil. Multiply that missing stalk by hundreds, and it is easy to get an idea of what is lost in the field. Replanting used to be a never neglected feature of corn growing, but farmers have generally got beyond that now. In getting beyond it, however, they got out of the field, and may have fewer loads of corn to husk in the fall. In this sense we are willing to join the crowd that would have us produce more, but we would do it on fewer acres.

We suggest that every reader of UP-TO-DATE FARMING, whether man or woman, who has a little spare time or who would like to engage in a profitable business among their neighbors in their own locality, write to Mr. W. W. Terriff, President Wolverine Soap Co., 147 Water street, Portland, Mich.

Mr. Teriff makes a straight-forward proposition to any of our readers to engage in a profitable business and will personally teach them how to make money. We know that Mr. Teriff has made a great success in the business, which means he must certainly have pleased his customers and agents in the past. He is entirely reliable and UP-TO-DATE FARMING recommends him.

About that Way

Employer—Well, my young man, what do you know? Can you write a good business letter, and are you quick and correct at figures?

College Graduate—Well, we didn't pay much attention to those little things, but I'm hard to beat at getting tricks on the other fellows.

A Costly Poem

She—This hat cost $20. Isn't it a poem?

He—Why, my dear, $20 would buy a whole library of the most beautiful poems?

Action Needed

Instead of more commissions to investigate, we need action in marketing. Try this system—Producer, railroad, consumers' own receiving station.

Now Selling at FACTORY Prices

FREIGHT PREPAID

This is a special 30-day sale of 10,000 sheets of Edwards Steel Shingles. Our direct-from-factory prices are suprisingly low. And we now pay all the freight. Here is a great bargain—an opportunity to buy the most **durable, fireproof** roof for much LESS than the commonplace kind.

Edwards STEEL Shingles

outwear FOUR ordinary shingle roofs, are ten times easier to put on, and yet, THEY ACTUALLY COST LESS THAN WOODEN SHINGLES. They cost LESS, mind you.

Do not judge Edwards Steel Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely prevents rust from ever getting a foothold, as 100,000 delighted owners of Edwards Roofs have found out. It's the famous Edwards Tightcote Process applied to genuine Open Hearth Steel.

STEEL Shingles Easily Put On

You don't have to nail these steel shingles, like wood shingles, ONE AT A TIME. **Put on as high as 100 at once,** for they come in big sheets ready to nail on sheathing or old roof. Much easier than putting on wood shingles. No extra materials to buy, no painting to do, no tools to borrow. Your hired man can do the job.

No Danger of Fire

No, Sir, you don't ever hear of any building burning up if it is roofed with Edwards STEEL Shingles. It's the man who roofs with **wooden** shingles or **composition** paper who loses by fire his **house or barn.**

Why risk life and valuable property when you can make your buildings practically fireproof simply by roofing with Edwards STEEL Shingles?

Every Edwards roof is guaranteed against lightning by a $10,000 bond.

WRITE! Send postal at once for our latest Roofing Book No. 291 and Special Factory Prices. Give size of roof, if you can. (94)

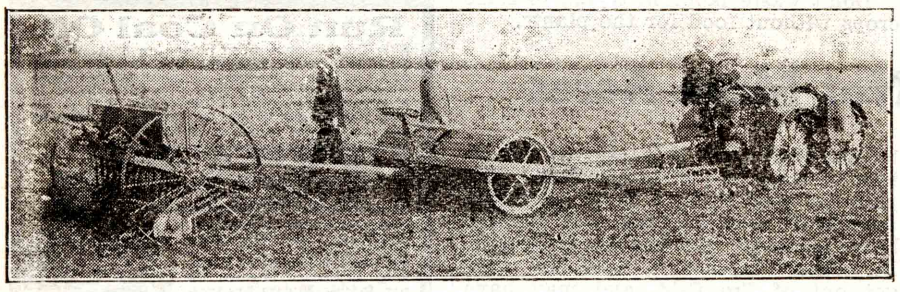
In and About the Fields

Production and Marketing

THE FARMER AS HE IS

THE farmer is no longer a "hayseed," and the paper which shows him off as a ridiculous personage with uncouth actions and clothed as a tramp is a "back number." Farming is now recognized as one of the business enterprises of the world, and the farmer as being entitled to a position by the side of progressive people. Of course these are reading farmers, and they are the ones that have brought farmers to the front. There are still some tillers of the soil who remain in the old ruts. They do not read, are inclined to take things as they come, are bringing up their families surrounded by conditions years out of date, and are really a hindrance of the progressive ideas now so dominant among reading people. We are sorry for non-progressive people no matter of what class, and we certainly regret that any farmers hold back in an advancing period like this. We know no remedy except to induce them to become reading farmers. This must depend largely upon their neighbors who know them personally and meet them in the ordinary affairs of life. We believe if they had it they would become readers of UP-TO-DATE FARMING. We make the ideas of the new system so plain and



THE IRON HORSE IS COMING INTO MORE GENERAL USE EVERY DAY

so emphatically tell of the wrongs farmers have so long borne, that they could not but become interested. We have still another hope in such families. The young people growing up in such homes around them. They will gladly read if they have a chance, and when they get interested in what they read they will interest their parents. This is the surest way out, and it is the easiest way to overcome the obstacles that block agricultural progress.

But it was not our purpose to solicit subscriptions in this article, but rather to congratulate farmers who read. In almost every section of the country now the reading farmers outnumber those who do not read, and they are reading the things that most vitally concern them. It is no wonder that there is a spirit of progress in the rural districts, and it is no wonder that the other folks are taking notice. Reading farmers know things they never dreamed of before. And they will know more. The half has not been told, and we propose to tell it no matter who may be offended.

Our hope centers in the reading farmers, and our supreme desire is to get all to read that all may know and act upon the truth.

SOW CLOVER

WE ALWAYS feel safe in advising farmers to sow clover; and in clover we include all leguminous crops. We make special mention of clover because its area of growth is more general. Many who are very successful growers of clover sow the seed in February or early in March, where winter wheat was sown last fall. We have found some difficulty in having the seed so sown to get covered. Light freezing and thawing is largely depended upon for that purpose, though some give the wheat a light harrowing after the clover seed has been sown, and claim that the wheat itself is benefited thereby. For that to be the result it occurs to us the ground should be in very fine condition.

We have had good success in sowing clover with oats. In that case the ground should be a little more carefully prepared than is usually done for oats alone.

The only question about sowing clover is the cost of the seed. Clover seed is high, it is true, but the chances for gain are so great that some risk is justifiable. Clover hay has become a profitable commercial commodity besides being one of the best feeds to use on the farm. Then the high price of the seed and the ready demand for it makes the saving of the seed a money-making proposition. To all this add the benefit to the land. This in reality is the most attractive part of it. Land that produces clover can not become exhausted, and it is almost impossible to keep up the fertility of soil without producing clover or some leguminous crop.

Fables for Farmers

Once upon a time there was a man who had money (remember this is only a fable). Never having had money before, and not knowing how to use it, he sought the advice of a wise friend.

"Oh, friend," he said, pointing to bushel baskets full of silver and paper money, "what shall I do with all this?"

"Bank it," his friend advised him, "and it will grow into much more money for you; let it grow interest for you." Thereupon the friend's advice was quickly followed (remember, this is only a fable; advice is generally disregarded).

But soon he began to draw out little sums of this money and didn't put any more back in the bank upon which the interest was to grow. And then one day his check was refused—he didn't have any more money left.

That's all there is to this fable except the moral.

And the moral reads, "If you draw upon your bank account and don't put anything back upon which the interest can grow and from which you are to get your sustenance, you are in the same plight when you take the sustenance out of your soil and don't replace it by proper fertilization."—Henry G. Bell, Agronomist, Middle West Soil Improvement Committee.

(And we will just add, that it is necessary to have money in the bank with which to improve the soil.—Ed.)

A full grown rat will consume a dollar's worth of grain and vegetables in the course of a year and oftentimes destroy or ruin in the same period property of many times the amount mentioned. It is because of this fact that the rat campaig nis a vital and important one and that every one who can should have a hand in it.

Did Not Want to Excel Her Parents

Mother, to Minister—Yes, we are going to have Lucy highly educated.

Lucy, breaking into the conversation—No, mother, I don't want to be highly educated. I want to be just like you and papa.

PUZZLE

Name the ten Advertisers Represented below

Just a little of your time may win for you the first prize in this interesting contest

EXPLANATION

We reproduce above portions of ten advertisements in this issue. For example: The first one is from the advertisement of Domestic Sewing Machine Co., The others you are to find.

CONDITIONS

In addition to the solution of this puzzle it is a condition that each contestant, in order to have his answer considered, shall write a special letter, telling us which advertisement he (or she) likes best in February 1st number, and why. In case of a tie, prizes will be awarded to the ones writing the best letters. Answers to this contest must be written entirely separate from orders or letters on other subjects, otherwise they will not be considered.

Contest open to every reader living outside of Indianapolis and Marion County, Ind.

All answers to be considered must be received before February 1.

We can not answer letters regarding this contest; the conditions given must be complied with.

PRIZES

First prize, to correct answer and neatest and best letter $3.00

Second prize 2.00

Third prize 1.00

A present will be given to each of the next 10 sending correct answers and neatest and best letters.

THE LEGUMES AND INOCULATION

By William Galloway

IT IS said that in Germany, where inoculation of legumes was first practiced scientifically, no intelligent farmer thinks of planting alfalfa, the clovers, vetch, soy beans, lupins, serradella, field or garden peas or beans, without applying a pure culture of the nitrogen-gathering bacteria to his seeds just before sowing them.

Nobbe and Hiltner, two famous bacteriologists of Germany, first discovered a way to prepare these legume bacteria for the market. They put their product up in a culture-medium, or food, which preserves them for many months—much the same way that yeast manufacturers put up yeast. This product was patented in all the civilized countries of the world, and a trade name, "Nitragin," was at the same time registered in all these countries.

"Nitragin" is well known among agricultural scientists the world over. It has been on the European markets for many years, and on the American markets for about four years.

It is next to impossible to start alfalfa, soy beans, lupins, serradella, and some other legumes, on soil where they have not previously grown, without artificial inoculation. And those who have carefully tested all methods appear to prefer the pure culture to the soil transfer process. The latter carries with it the danger of transmitting plant diseases and noxious weed seeds.

If, as many German farmers appear to believe, the legume bacteria deteriote from year to year in the soil, there seems to be a good business reason for inoculating legume seed at every planting.. It is said that with the supply of lime kept up in the soil, fresh inoculation each seeding time increases the growth of the plants and adds protein to an extent that pays a profit on the cost of the pure culture of bacteria.

I am informed that the practice of pure culture inoculation has grown in this country until it is almost universal. A movement is now on foot to induce the farmers in Iowa to plant a million acres of alfalfa, within the next few years. Illinois, Missouri, and several other states are also preparing for a similar acreage. This will be much easier to accomplish now, with a practical, guaranteed pure culture of alfalfa bacteria so readily obtainable.

Pure cultures are also prepared for each of the thirty or more legumes grown in this country.

World's Greatest Horse Trainer Tells His Secrets in New Book

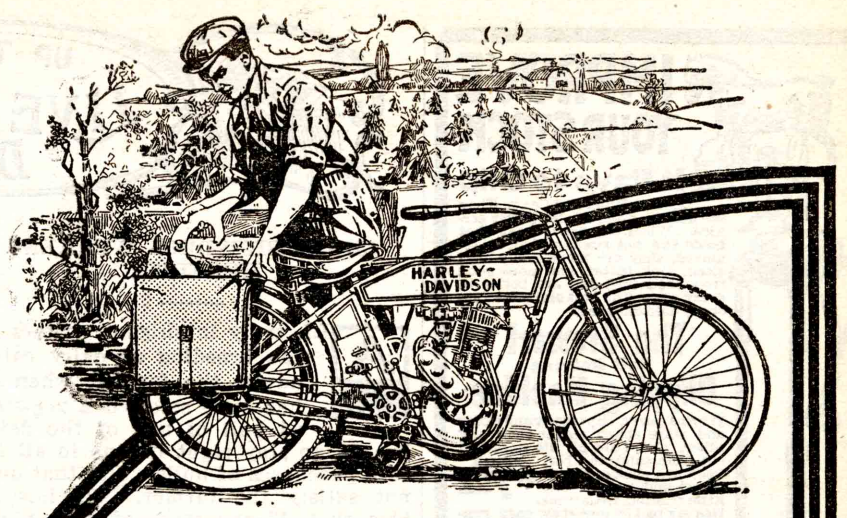
Owners of horses will find disclosed secrets of rare value in training horses and breaking colts if they send for a copy of the advanced edition of Prof. Jesse Beery's 1913 prospectus, now off the press. Prof. Beery is recognized by professional trainers as the world's greatest master of horses.

Prof. Beery has had a marvelous career. When a boy his love of horses and amazing insight into their natures led him to the stables. His astonishing control over unruly horses attracted attention, and vicious horses were brought from long distances to be subdued and trained by the "boy wonder."

The methods which made Prof. Beery successful in taking vicious, unmanagable and dangerous horses and turning them over in a few days gentle and broken of bad habits have now been written by this master of horses in simple, clear form. Any man can understand them and apply them in breaking and training his own horses, or those of others.

Thousands of men who have lost money, time and property through not being able to manage animals which develop bad habits, have adopted the Beery system, and with its methods have in a few days accomplished what was before impossible to them. Horses with bad habits can be bought at low cost, and after training by this method are sold at high prices. Hundreds make a business of breaking and training horses by the Beery system.

If you have a balky, tricky, vicious, dangerous horse that you want to quickly cure of its faults, write for the Beery prospectus on horse-training and colt-breaking. It will give you valuable knowledge about horses. It may save you a lot of money. Prof. Jesse Beery, Dept. 386, Pleasant Hill, Ohio.—Adv.



To Town and Back for a Cent

ALTHOUGH the Harley-Davidson will travel about ten miles for a cent that is one of its smaller advantages.

It will place the country for miles around at your and your children's command. It is the best "keep the boy on the farm" factor ever produced. It never tires, costs nothing when idle, and is always ready in case of emergency. It is also a great horse saver.

The sturdy construction of the

HARLEY-DAVIDSON

together with its reliability, economy and the fact that it is the only motorcycle made with the Ful-Floteing Seat (a device that does away with all jar and vibration due to rough roads) and its other exclusive features make it the ideal machine for country use.

Adopted for carrying United States Mail by 3700 carriers. Adopted for use in nine different government departments.

Call on the nearest Harley-Davidson dealer for demonstration or send for literature.

Farmers Sons Wanted with knowledge of farm stock and fair education to work in an office; $80 a month with advancement, steady employment, must be honest and reliable. Branch offices of the association are being established in each state. Apply at once, giving full particulars. The Veterinary Science Association, Dept. 22, London, Canada.

UP TO DATE LIVE STOCK AND DAIRYING

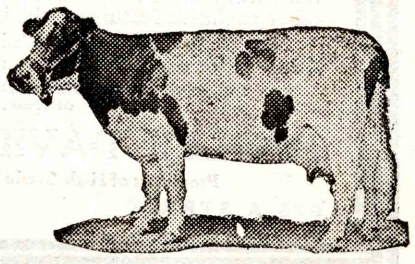
CROSS BREEDING WEAKENS HEREDITY

ALL truly intelligent writers on the breeding of dairy cattle advise the farmer, when he has once selected a registered bull of any of the dairy breeds, to stay right in line in all future purchases of bulls. But that does not satisfy the farmer. He has an idea that, if one cross of pure blood with his mongrel cows makes a marked improvement, why will not further crossing knit into one animal all the valuable traits possessed in each breed? For instance, he crosses his mongrel cows with a pure bred Jersey bull. He notes a great increase of richness in the milk of the resulting heifers over that of the dam. Then he wants more quantity, and he breeds that heifer to a Holstein bull and gets a heifer. Then he wants the golden color in the milk of the Guernsey, and he breeds this last heifer to a pure bred Guernsey bull.

There are a host of farmers who think that is the right way of breeding. They are looking only on the surface the problem. Internally they have set up in all the crosses since the first one a war of the breeds, a conflict of prepotencies, thus weakening the heredity in a straight line. Constant outcrossing, as is well known among breeders, will finally destroy the line of descent, and all we get is a hodge-podge of traits and tendencies, with almost universally a decline in the milk producing power.

One cross, say, with a Holstein bull and a mongrel cow brings a heifer with 50 per cent. of each. If that heifer is bred to a pure bred Holstein the progeny is 75 per cent Holstein. Breed that progeny to a Holstein straight in line and we have a calf 87½ per cent. Holstein. We have been steadily "eliminating the hybrid." But it should be remembered that the producing capacity of each generation will depend greatly on the dairy prepotency of the sire in each case. Bred in this way, there is a constant increase of Holstein heredity in the resulting heifers of each generation, all of which will be enhanced and enriched if special care is taken to select only first class bulls for every generation.

The principles that govern are as old as life itself, but they are very dimly seen by too large a proportion of the farmers who produce the cattle of the country.



The Holsteins continue to roll up great milk and butter records. No sooner is the record broken by one animal than another comes forward with a still larger yield. The latest is Aralia De Kol, illustrated here, the first cow in the world to produce 28,000 pounds of milk in a year. Her record is 28,090 pounds of milk that made 1,142.32 pounds of butter. One year after calving she produced 501.4 pounds of milk in seven days. She is owned by A. W. Morris & Sons, Woodland, Cal.

France keeps fifteen times as many sheep as the United States, and this fact has without doubt much to do with the thrift and wealth of the French people.

HOLDING BACK MILK

It is not unusual for a cow to hold back her milk, but it is not natural for her to do so. The refusal of a cow to "give down" is usually due to rough treatment. It may require good treatment for a considerable time to change the "holding up" habit. We have never seen a cow to refuse to respond to good treatment, whether she had the habit of holding up her milk or the kicking habit.

SHELTER YOUNG STOCK

If young animals are not sheltered against severe weather the extra feed is all used up in an attempt on nature's part to keep the animals warm, and no profit results. The scrub animal and the treatment which made him a scrub have no place on the high priced land of today. Shelter is just as important as feed, and both are necessary in abundance.

The Shepherd

Sheep farming has been practiced since the earliest times and is one of the most profitable branches of the live stock industry.

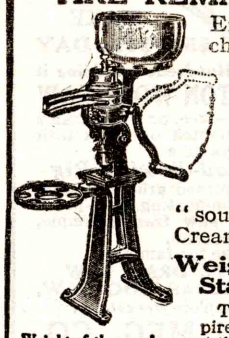
Two parts oats and one of bran make a well balanced ration for pregnant ewes.

Oilmeal is greatly relished by lambs and helps greatly in obtaining a fine finish for the market.

Sheep at six years of age generally lose their teeth; hence they should be fattened and sold before this period.

Sheep generally sell to the best advantage when the bunch is as uniform as possible.

EMPIRE
Cream Separators
ARE REMARKABLE



Weight of the crank turns the Empire

Engineers and mechanics judge machines by the "feel" and the "sound." We do a world-wide business with people who depend on the "feel" and "sound" of Empire Cream Separators.

Weight of Crank Starts Empire

The crank of the Empire is short and light, yet the mere weight of the crank starts the machine.

Almost Silent in Action

The Empire runs so quietly it would not wake the average baby asleep in the same room. This practically noiseless running is a great achievement. Empire Cream Separators are remarkable for easy, quiet running. The reason is the wonderful perfection of design and construction. For over a generation Empires have been preferred by those who judge by the "feel" and "sound."

Free Trial or Exchange

You may have a free trial of an Empire. You may exchange your present separator for an Empire.

Ask for Catalog 107. You get as quick and courteous attention from us, and from our local dealers, as you get fast, clean skimming from the Empire.

W. F. YOUNG, P. D. F., 102 Temple St., Springfield, Mass.

DE LAVAL
CREAM SEPARATORS

Those who *know* buy the DE LAVAL

Creamerymen—Because they are experts in the handling of cream and know by long experience that the De Laval skims cleanest and wears longest. That is why 98 per cent. of the world's creameries use the De Laval exclusively.

Experienced Dairymen—The De Laval is the universal favorite among big dairymen. They know that no other separator will give them such satisfactory service.

Old De Laval Users—Whenever a man who has used an old model De Laval decides to purchase a later style machine he invariably buys another De Laval.

Men Who Investigate—If anyone takes the time to investigate the merits of the various cream separators, either by finding out from other users what kind of service their machines have given or by testing other machines out against the De Laval, the chances are a hundred to one that his choice will be the De Laval. More De Laval machines are in use than any other make. There is a reason. The De Laval agent in your locality will be glad to tell you why.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

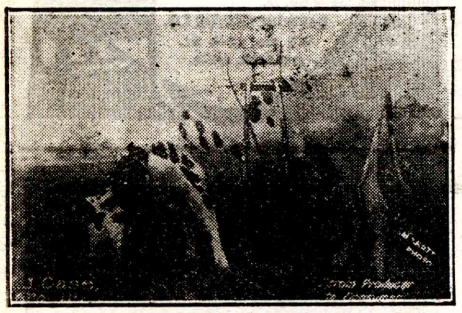
THE DE LAVAL SEPARATOR CO.
NEW YORK CHICAGO SAN FRANCISCO SEATTLE

SHEEP WATER

Water for the lambs is of more importance than is sometimes thought. When the dews are heavy, as they are liable to be in late fall, the lambs may not drink much water, but that is not an indication that they do not need some. What they need they need badly, and no animal is so choice of the water it drinks as the sheep. Water is as important in the growth of any animal as food, and it is so cheap that it is shortsighted not to supply plenty of it fresh. It is important, too, to see that the lambs find it.

ICE WATER BAD FOR DAIRY COWS

Many a hard worked dairy cow will chill and shiver this winter when she takes a draft of icy water from the tank. And at the next milking time she will still be chilly and will give less milk than if her insides had not been frozen up. It pays to give the dairy cows warmed water—that is, with the chill taken off. Winter milk production is not a natural function of the cow, but is strictly an artificial arrangement by man. If profits are expected the cow must be humored a little. A small tank heater will pay big dividends in a dairy herd.



REDUCING THE COST OF LIVING

MILK FEVER

A bulletin from the Kentucky Experiment station on milk fever advances the theory that the disease is due to the toxin elaborated in the udder preceding normal milk production. The success of the modern air treatment is due to preventing by means of pressure the absorption of this toxin. Through the extreme dilation of the udder the blood supplying the mammary gland is greatly diminished until the milk gland has the opportunity to resume its ordinary activity. There seems to be present in the colostrum of the cow suffering with milk fever some substance toxic to guinea pigs.

Notes

It is estimated by Professor Kennedy, director of the Iowa Agriculture college, that if losses from hog cholera continue until January 1 at the rate they have occurred during the past three months, the farmers of the state will have suffered a loss of 12,000,000. To offset this tremendous loss the state legislature appropriated the measly sum of $5,000 with which to provide serum for the treatment of the disease, within the state.

Alfalfa hay and corn silage make an ideal ration for dairy cows, and, what is more, it is an economical ration from the standpoint of cost. Moreover, the raising of these two feeds helps to solve the biggest problem with which the American stock and dairy farmer is confronted—that of raising his own protein concentrates at home instead of having to pay high prices for imported feed stuffs. The facts stated simply mean that more farmers should erect silos and that more should grow alfalfa.

Don't expect that stable not to be bughouse if the hens roost in it, and don't kick the horse for kicking you when he gets bugs on him.

Don't blame the hogs for eating young turkeys when you do not have a wire fence to keep them out, and don't be surprised if your turks are not when they run in riot.

Never feed hogs or sheep in dusty places. The dust is injurious both in the mouth and in the nose.

Stock must be kept warm if they do well. If they have not comfortable quarters they must have extra feed to supply the needed animal heat. Which is cheaper, shelter or feed?

After they are weaned the pigs must be kept growing. See to that. Nothing can grow without plenty and suitable feed.

One Dollar

Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded

$1.00 Brings It—Freight Prepaid

1913 Model

The CHATHAM Grain Grader and Cleaner

Manson Campbell

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

Your Dollar Returned

if you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept. 31,

MANSON CAMPBELL CO., Detroit, Mich., Kansas City, Mo., Minneapolis, Minn.

CANADA'S OFFERING

To The Settler

The American Rush to Western Canada is Increasing

Free Homesteads In the new Districts of Manitoba, Saskatchewan and Alberta, there are thousands of Free Homesteads left, which to the man making entry in 3 years' time will be worth from $20 to $25 per acre. These lands are well adapted to grain growing and cattle raising.

Excellent Railway Facilities

In many cases the railways in Canada have been built in advance of settlement, and in a short time there will not be a settler who need be more than ten or twelve miles from a line of railway. Railway Rates are regulated by Government Commission.

SOCIAL CONDITIONS. The American Settler is at home in Western Canada. He is not a stranger in a strange land, having nearly a million of his own people already settled there. If you desire to know why the condition of the Canadian Settler is so prosperous write to any of the Canadian Government Agents and send for literature, rates, &c., to

G. W. Aird
215 Traction Terminal Bldg.
Indianapolis, Ind.

or address Supt. of Immigration, Ottawa, Canada.

When Answering Advertisements Don't Fail to Mention Up-to-Date Farming

Give Hogs Sal Tone and Watch 'em Grow

There's money in raising sound, healthy, wormless hogs. But much of the expensive feed given to wormy animals is a dead loss. Because the worms eat at the first table, and the animals get nothing but the leavings. All animals like Sal Tone. They will take it without urging. But worms and parasites simply can't stand it. It drives them out "tops and all." One man wrote us recently—"Sal Tone drove the worms out by the gallon.

The Stock Tonic — SAL TONE (TRADE MARK) — The Great Wormicide

Sal Tone is a medicated salt tonic wormicide and conditioner. It is ready prepared. It requires no skill to use it. Simple directions accompany each package.

It contains the vegetable remedies the animal's instinct would lead it to look for if allowed free range.

Sal Tone is prepared under the personal direction of Mr. John E. Robbins, who is now and has been for thirty years, a successful stock raiser and breeder on a large scale. It is the result of *practical experience*, the only experience that amounts to anything in handling animals. There is no *theory* about it. It has been used by him for years.

Sal Tone, the tested-and-proved remedy, is just as easy to get as the poorly compounded kinds.

We Will Send You a Supply On 90 Days' Approval

We will ship Sal Tone to you on our big guarantee that it costs you nothing if it fails to do all we claim—to remove stomach and intestinal worms. You merely pay the small freight charge and use according to directions for 90 days. At the end of that time, after you have had a chance to fatten and market your stock, report results. If Sal Tone does not do all we claim, say so and it costs you nothing. We leave it to you. You are the judge and the jury. Your verdict is final with us. There will be no appeal. This offer means money in your pocket. Don't hesitate. Mail the coupon NOW.

THE JOHN E. ROBBINS COMPANY
Greensburg, Indiana

Prices: 40 lbs., $2.25; 100 lbs., $5; 200 lbs., $9; 800 lbs., $13. No mail orders filled for less than 40 lbs. Sal Tone is always sold in "trade marked" packages—never in bulk.

Ask Your Dealer for Sal Tone. If He Can Not Supply You, We Will Ship Direct.

The John E. Robbins Company, Greensburg, Indiana
Ship me your SPECIAL 100 LB. 90-DAY TRIAL ORDER OF SAL TONE. I will tell you in 90 days whether it does as you say, and if it does, will pay for it. If it does not I owe you nothing. UF2113

THE BLOOD SUCKER HEAD LICE

OUR scientific big guns call the head louse Goniodes eynsfordu; poultrymen call him the bloodsucker, and well they may, for this crawler gets the lifeblood of millions of chicks and reduces the vitality of many flocks.

The head louse and the gapeworm perhaps divide honors evenly as chick and turkey poult destroyers.

So it isn't a question of "look a leetle out," but you must fight these head lice all the year round on young and old stock if you would raise the maximum to full maturity and get the best returns from flocks.

Head lice are hard to kill.

Very few louse powders knock them, and a few louse killer manufacturers confess it and make a special head louse ointment to hit this bug.

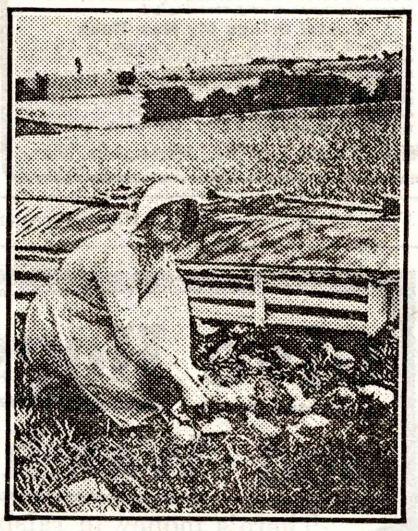

Photo by C. M. Barnitz.

GREASING TURKEY POULTS.

Pure Persian insect powder will do the trick, and you'll find all the head lice and body lice in the bottom of the basket if you spread it on a thin cloth that covers the chicks in that basket on the kitchen hearth.

Grease is a great bloodsucker knocker.

Grandmother used pure lard. She rubbed a little on the head, neck and throat and a trifle under each wing, and she started every brood that way and greased them "off and on" all summer till they were abdle to fight their own bugs.

Some use sweet cream instead of lard, and that's good too.

Then some use sulphur ointment, but it's apt to blind the chicks, and if used in damp weather chicks are apt to take cold.

Coal oil, gasoline and turpentine will kill the lice, but are too strong and irritate. The best all round ointment is made of a five cent. block of camphor chipped into a half pound of melted lard. That ointment keeps. It knocks lice quick and takes but a small amount. But really why should clucks and chicks come off the nest bughouse?

Isn't it a sign that John Bughouse or some of his near relatives are on the job?

If Mother Hen is set in a clean nest in a clean place and is dusted with a good killer before and during the hatch she and her family should come out of bed without bugs.

Feathers and Eggshells

Many a fertile egg is spoiled by bad handling—a knock ruptures the embryo, extremes of heat or cold, dampness, bad air, filth, these all affect the life germ. Eggs shipped by express are often queered by baggage smashers.

So many set too many eggs under a hen. Few hens can cover more than fifteen, and then only in warm weather. From ten to thirteen is about the number given to hens by experts. The colder the weather the fewer the eggs.

Many will complain this season because turkey eggs do not hatch or poults are weak. It is simply the old story of overfat breeders who have been fed excess carbohydrates (corn) all winter instead of a rightly balanced ration.

When the old hen begins to lay and whip her chicks it's time to wean them. Trying to force an old hen to hover chicks nearly always ends in the death of some of them, and we have known a cluck to skin the backs of the whole hatch.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in **"A Cart Load of Fun"** are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. **"A Cart Load of Fun"** is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.

Bees—Housecleaning

By J. P. Bramfield

We have a few colonies of bees and I notice a colony or so that have a considerable number of dead bees in front that seem to have been carried out recently. We do not notice that the others have such an amount of dead bees in front of their hives. At this rate they will soon all be dead. Can this be some disease working among them?"

THIS is only a natural consequence for bees in our latitude. The bees are at this time of the year in a winter cluster like a ball or sphere, and as the days get colder the tighter they adhere in the cluster. When a nice, warm, sunshiny day in winter comes, say a temperature of 50 degrees or higher, this cluster will loosen and the bees stir about and clean house. The old bees and others that may have died from natural causes are carried and dropped in front of the hive when one of these days comes along.

Now some individual colony will loosen the winter cluster on a little colder day than some others, and then a hive or so may have a more favorable position to get the noonday sun and warmth, or a colony's winter cluster may happen to be on the sunny side of the hive, thus receiving a warmth that the others do not get, and it is liable to loosen and clean out the dead bees that hay have died from day to day.

In this winter cleaning dead bees are usually dropped at or just over the alighting board, while during the warmer seasons when the bees will venture out they carry the dead bees and other trash of the hive far away and do not cause the irregular condition you speak of.

Bees can often be located in woods by observing this house cleaning operation on the snow at the base of trees, the tree is marked and when the proper season arrives the bees and honey can be recovered by those who care to do so.

Deacon Prim's Downfall

Do you remember Deacon Prim,
That good natured old soul?
He always boasted that he had
A perfect self control.

"Now, boys," he said, "control yourself.
You'll never be profane;
Your temper ne'er will rear and tear
If you yourself restrain."

"I wonder now," said Trixie Brown,
"If deacon wouldn't swear
If he sat plunk on a sharp tack
I set up on his chair.

"I'd like to try his self control.
I'd like to have the chance
To drop just one live bumblebee
Into his Sunday pants."

Wel, Trixie had his chance that day,
For when we went to swim
Who was a-swimming in the dam
But good old Deacon Prim!

Then Trixie found a hornets' nest,
And when he had a chance
He gently slipped that redhot nest
Into the deacon's pants.

Did deacon swear when he came out
And jumped into those pants?
Did he tear up the atmosphere
And do a grizzly dance?

Well, say, of all the languages
This world has ever spoke
The deacon swore them all to rags,
And they went up in smoke.

My friend, your brand of self control
May seem the very best;
But, say, have you sat right plunk down
On a hot hornets' nest?

—C. M. Barnitz.

Experience Versus Theories

The best fence manufactured today is built on experience. A fence built upon Shop Theories is one thing, but a fence built upon experience to meet the farmer's requirements, one that successfully stood the test for years and years, is quite another matter. The Coiled Spring Fence Company, Box 88, Winchester, Ind., whose ad appears in this issue, is making a fence that is built upon experience. They have learned from 26 years' experience what a farmer's fence ought to be to give satisfaction from a farmer's standpoint. You should write for their catalog at once.—Adv.

AMERICAN FENCE

ORIGINAL AND GENUINE

STEEL POSTS AND GATES

American Steel Fence Post Cheaper than Wood and More Durable. Get Catalog.

Over half the farmers of America are recommending American Fence. Let the judgment of this majority be your guide.

More For Your Money

AMERICAN FENCE has always been the economical fence. Now it's a better investment than ever. The same superior steel (open hearth or Bessemer), the same big, stiff wires—but the galvanizing is even better than ever, being heavier, more permanent, giving added insurance against rust. Investigate American Fence. Note the prices and you'll do some fencing this year.

Dealers In Every Place

where farm supplies are sold. Shipped to them in carload lots, thus saving freight charges and enabling dealers to sell at lowest prices, giving buyer the benefit.

Plain as Can Be

Thomas, I can't understand
How you folks get on so well;
You always get the highest price
For everything you have to sell.
Why that is easy, Mr. Burt,
As easy as to turn a plate;
Our folks look out for Number One,
And read and practice UP-TO-DATE.

YES, BUT—

ARE you always expecting something a little worse than what is? There are women, and men, too, in fact; women who are queens of a home and mothers of children, who, no matter with what good news or word of good cheer you may go to them, always have the one answer ready: "Yes, but—" The "but" always leads to a pending change, a worse condition that is coming. In their lives there is always a cloud ready to hide the sun. There may be no chance to find fault with the present, but very soon everything will be worse. Tomorrow is always an evil day; and if it come with nothing but sunshine, no matter, there is soon to be another tomorrow.

We are sorry for people of that kind. God can do nothing for them. Neither can man. They may accept the good things given, but they can neither appreciate nor enjoy them because they are so soon to be followed by something evil that will eclipse the good. Life to such people is a burden anyway you may fix it, for the fear of something coming takes all the pleasure out of what is.

We are glad not many are so pessimistic, but there are some just that way, and they are not only unhappy themselves, but a cloud of gloom seems to surround them, and it affects every one who comes near.

We believe all these tendencies can be overcome. It is so much better to look on the bright than the dark side. We really do not know what awaits us in the eternal future, but this world, this existence, is NOW; and if we are happy now we can much better risk the future.

There is another class that answers with the same words—yes, but—. Take them a tale of sorrow, of grief, of woe. "Yes," with a tinge of sadness, perhaps, "but—" and there is a glow that lights up the darkness. No matter how sad the tale or how severe the blow, there is something to come that will make it easier. To them tomorrow is always bright, and hope that sees good and not evil is always aglow in the heart.

Dear reader, how is it with you? Does the sun always shine in the home, or are you constantly looking for shadows and sorrow? In what atmosphere are the children growing up? In after years will they remember bright smiles of good cheer and hopefulness, or will a pessimistic gloom on mother's face haunt them in the after years? Be happy and cheerful. Make the most of life. Get all the good things it has in store for you, and constantly expect the better. In fact, live for the better, and lead all around you to the higher and nobler life.

Do you know where it is? How many things in the home need to be hunted for every time they are required for use! Keep everything in its place, and teach the children to do the same, the quicker the better.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

LIFE is a choice, every day toward success or failure, Every choice for good leads on to true victory, and every choice for evil weakens and debases.

Some Plain Dishes

Bread pudding is such an ordinary common pudding that many feel it is too common to enjoy. Did you ever make one like this? Spread slices of bread with butter, lay in a baking dish, add a handful of raisins, and pour over sufficient milk to cover; allow the bread to soak in the milk, letting the dish stand where it will keep warm. After an hour or two pour over a custard such as you use for a cup of custard pie. Bake until firm.

Another Bread Pudding.—Take two cups of bread crumbs, a cup of sugar, a cup of molasses, half a cup of raisins, a dash of cinnamon and two cups of sweet milk. Bake half an hour, stirring often, then add four cups of milk and bake two hours longer. Serve hot or cold.

Ginger Bread.—Melt a half cup of shortening, add it with a cup of molasses and sugar and one cup of sugar to a beaten egg; add a teaspoonful of cinnamon, a tablespoonful of ginger and three cups of flour. Mix well and add, just as the last, two level teaspoonfuls of soda dissolved in a cup of boiling water. Stir in quickly and bake in a well greased dripping pan. If lard or fryings are used for shortening, add salt to make it palatable.

Surprise.—Cut a half loaf into slices or use left-over bread, butter and lay into a deep pie plate. Cut up good baking apples, putting a layer of apples on the bottom of the pan, then sugar sufficient to sweeten, then the bread; continue until the dish is full. Bake until soft, turn out in a dish and serve.

By and By

Mother—Goodness, Tommy, will you never learn to be a good boy?

Tommy—Yes, mother, when I get grown.

Great Crops of Strawberries and How to Grow Them

IS a beautifully illustrated book of expert information written by America's most successful strawberry grower. It gives the famous Kellogg sure-crop method and explains just how Pedigree Plants are grown on the great Kellogg plant farms in Michigan, Oregon and Idaho. Any man, woman, boy or girl, who reads this book can grow big crops and get big prices. Strawberries yield more dollars per acre than any other crop. Our book tells the whole story. It's FREE to you.

What is Now the Fashion

Up-to-Date Patterns

All Patterns 10 cents each, post paid

08-10-30—SHAVING PAD.—A shaving pad makes a useful present for a man, and the one illustrated may be embroidered on white or colored linen.

5822—GIRLS' DRESS—The dress illustrated herewith is just the thing for the school girl. It can be made with long or short sleeves and with removable chemisette.

Serge or cheviot can be used for this dress with the collar and cuffs of contrasting material.

The pattern, 5822, is cut in sizes 6 to 12 years. Medium size requires 3¼ yards of 36-inch material, ½ yard of 27-inch contrasting goods.

5904—LADIES' SEVEN GORED SKIRT—This model represents a charming skirt in seven gores and a design very simple to carry out. It can be made with high or regulation waistline, and with inverted plait or habit back.

Any of the popular woolens may be employed in its construction, and the skirt may be used for separate wear or as part of a coat suit.

The pattern, 5904, is cut in sizes 22 to 30 inches waist measure. Width of lower edge is 2¾ yards. Medium size will require 4⅝ yards of 36-inch material or 3⅞ yards of goods 44 inches wide.

5964—GIRL'S DRESS. The blouse of this dress closes at the left side of the front. The skirt is a three-gored model joined to an underwaist.

Serge or broadcloth can be used to make this dress with the collar and cuffs of contrasting material.

Pattern No. 5964 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 2¾ yards of 44-inch material, with ½ yard of 27-inch contrasting goods. The underwaist requires ½ yard of 36-inch material.

5958—MISSES' AND SMALL WOMEN'S DRESS—This dress is just the thing for the girl who attends school. It can be made with either the empire or regulation waistline. The skirt is a six-gored model.

Serge or cheviot can be used to make this dress, with the collar of satin.

The pattern, 5958, is cut in sizes 14, 16 and 18 years. Medium size requires 6 yards of 36-inch material, ⅜ of a yard of 24-inch satin and ⅜ of a yard of 18-inch all-over.

5808—LADIES' WAIST—In this model we have a plain shirtwaist with an uncommon feature, the sleeves extending to the neck edge. This is a new idea and one that has made a pronounced hit. Every woman requires a number of plain shirtwaists for general wear, and she likes these models to be different in some degree one from the other.

Linen, madras, percale, chambray or gingham may be used.

The pattern, 5808, is cut in sizes 32 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material.

5903—LADIES' DRESS—The lines of this stylish frock are excellent though the model is a simple one. It has the fashionable and convenient front closing, and is made with a three-piece skirt.

The lines of this stylish frock are excellent though the model is a simple one. It has the fashionable and convenient front closing, and is made with a three-piece skirt.

The pattern, 5903, is cut in sizes 32 to 42 inches bust measure. Medium size requires 4¾ yards of 36-inch material and 2⅜ yards of plaiting.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. All you have to do is to give number and the size you want and write your name and address plainly. Address Pattern Desk.

UP-TO-DATE FARMING, Indianapolis, Ind.

Always on Guard

No matter where a ship may be along the American coast; no matter how dark, or cold, or stormy the night, the coast guard is on watch, patrolling the nearest beach or rocky cliffs.

This man, always on guard, could, by his own unsupported efforts, do little to save life, or to guide ships away from perilous points.

As a unit in an efficient system and able, at a moment's notice, to command the service of his nearby station, he becomes a power to whom all ship owners and passengers are indebted.

In the same way, the Bell Telephone in your home and office is always on guard.

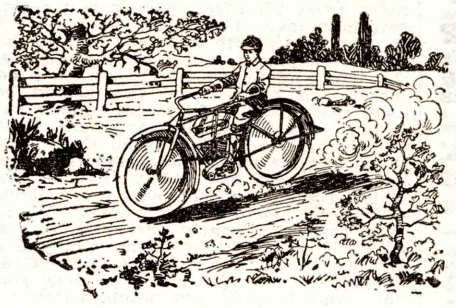
By itself, it is only an ingenious instrument; but as a vital unit in the Bell System, which links together seven million other telephones in all parts of this country, that single telephone instrument becomes a power to help you at any moment of any hour, day or night.

It costs unwearying effort and millions of dollars to keep the Bell System always on guard, but this is the only kind of service that can adequately take care of the social and commercial needs of all the people of a Nation.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY
AND ASSOCIATED COMPANIES

Every Bell Telephone is the Center of the System

$250 Motorcycle Given Away



YOU see in this picture a boy riding one of the $250 Excelsior Motorcycles we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (✖) and send the picture to me. Be sure to send me your name and address, for I will tell you all about the contest in which you can win the seven horse-power motorcycle and many other prizes.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

NEVER since the beginning of this department in UP-TO-DATE FARMING has such a pile of letters come to the Cadet editor as now lie before him, all received since the letters for last issue were made up. All right. We are proud of them, and not one shall go to the waste basket, but many must necessarily be crowded out. That is the part we so much regret, but every writer is enrolled as a Cadet of Euity.

DEAR CADETS: I am a farmer's daughter, 20 years of age, and live in the glades of Kentucky, which has been my home for about 9 years. Our most important crops are corn, wheat, oats, potataes and garden vegetables. I also raised nearly a bushel of peanuts from a quart of seed I planted last spring. My school is out, and I guess I will spend the remaining winter days in reading, writing and quilt piecing. We take another farm paper, but I like the young folks page in this paper the best. I notice that most of the Cadets are farmers' sons and daughters. We should be proud of that. I never lived in the city, but I have been there several times. I enjoy a visit to town, but I want it to be short. My longest stay was only two weeks, and I was glad when the time came to get back home. I wish the cows may not get Mr. Gray. Be careful, Howard, during the snowy season.—Clara Edwards, Bandy, Ky.

(Editor's Note—Howard is not green, he's Gray.

DEAR CADETS: I am very much interested in your letters. I am not a farmer's daughter, but I would like to be. I expect to go on a farm very soon. I am a railroader's daughter, and was born and raised in this city. My mother is dead, and I keep house for my father and brother. I will soon be 19, and my occupation is that of a trained nurse. I belong to Olivet Presbyterian church, of this city. I am a lover of music, animals and flowers. I enjoy the Cadet letters, and would like to exchange letters, postals and photos with the boys and girls.—Myrtle Trombla, 1027 Holmes Ave., Lima O.

DEAR CADETS: I am a girl of 15, and my hands are tied together with my mother's apron strings. But I have a penknife near me that I can use when she is not looking. My parents own a 240-acre farm, and I am supposed to be there when I am no where else. It is not very far to this farm when you are nearly there. So if you will invite me I will pay you all a visit if you will not expect me till the train I come on arrives. Mama says she will untie my hands long enough for me to answer all postals and letters I receive; so all please write to me.—Graycie Fennema, Othey, Ia.

DEAR CADETS: Will you please crowd over and make room for a Missouri girl? It won't take much room and I won't stay long. I am 17, and live on a farm 3 1-2 miles from Birchtree, our nearest town. I certainly love farm life, and wouldn't change places with any city girl. I have lived both places, and I think farm life is the best and purest life there is. I have father and mother and two sisters both older than I am, so I am still mama's baby. I went to a Christmas tree at the Baptist church, and had a jolly good time. Santa Claus left me many nice presents. I hope he visited you and didn't miss any one. I attend Sunday school twice every Sunday, and prayer meeting twice a week. We also have preaching nearly every Sunday, and Literary every Friday night, which I enjoy very much. I wish some of the Cadets would visit me; I would sure show you a time, and I know you would enjoy your visit. I attended annual prayer meeting last Tuesday night, and after it was over a crowd of us young folks had a watch party. We stayed up until one o'clock and watched the old year go out and the new year come in. We rang the bell until one o'clock and had a dandy time. We had our first snow today (January 2), and it hasn't been cold enough to skate yet. My next birthday will be April 12, and I would appreciate a card shower. I will be my own boss then. But there! mama's calling and I must be going. Would be pleased to hear from the Cadet girls and boys and will answer all I receive.—Bertha M. Martin, Birchtree, Mo.

DEAR CADETS: I am a farmer girl from Minnesota, 16 years of age, and live six miles out on a farm of 80 acres. I have 6 brothers and 2 sisters, and play the organ, guitar and violin, besides we have a banjo, mandolin and harp. The principal crops on our farm are potatoes, wheat, oats and corn. I would like to exchange cards, letters and photos with the Cadet boys and girls.—Eva E. Norlund, Finlayson, Minn.

DEAR CADETS: Will you let a happy young farmer be with you awhile? I will be 16 February 16, and wish you would all give me a shower of post cards. I just finished reading your page and thought it very interesting. I live in Minnesota and our crops are wheat, oats, barley, flax, corn and potatoes, but the farmers have to give it away. Number one wheat is only 70 cents a bushel. I would like to hear from all the Cadets, and will answer all I receive.—Carl Lindeen, Parker's Prairie, Minn.

DEAR CADETS: I will be 16 in February. We live 5 miles north of Amboy. I enjoy farm life because I can get out and work in summer. I would like to exchange letters with the Cadet boys and girls.—James Jackson, Amboy, Ind.

DEAR CADETS: How's everybody enjoying 1913 by this time? We have been having fine weather and good roads. Our first snow arrived yesterday (January 5), and so did out first 1913 UP-TO-DATE. Please move over a bit, Leona, and let me sit by Irene. I think she needs some one to cheer her up. And as to you, I don't think you need to worry, for I heard Fred's auto horn. "Who is that chap?" didn't I hear some one say? I am a farmer's son, 17 years young, and like to exchange letters and cards with the Cadets about as well as the other fellow. So you girls and boys that want to write, I'm your huckleberry. But look! Here comes the Cadet editor, and the waste basket is not full.—Bliss Loudenberg, Bradford, Ill.

DEAR CADETS: I am an 18-year-old boy, and my father is a mail carrier, but he owns 160 acres and I expect to farm when I become of age. I certainly am glad when UP-TO-DATE comes. There is a grab for it at our home. The first thing I do is to turn to the Cadet page. I want to exchange letters or postals with the Cadet boys and girls.—Donald Ridens, Lynville, Ind.

DEAR CADETS: I am not so fortunate as most of you, for I don't live in the country, which must be very delightful indeed. I live in the city, and I believe I would rather live here, for I like the gayeties of the city. I am 15 years old, and clerk in the postoffice, when I am not attending school. I am in first year of high school, and what a delightful time I do have in school! I have had about two weeks' vacation and it seems nearly a year. I do not take UP-TO-DATE FARMING, but I would like to, for I think it is a splendid paper, especially the Cadet page. I assure you there are the most interesting letters in it I ever read. Would be pleased to correspond with all the boys and girls.—Celia Foster, Midland City, Ohio.

DEAR CADETS: I had never noticed the page for young people in UP-TO-DATE FARMING until the last two numbers, and then I became very much interested and wish to join you. I am a girl who fully enjoys living on a farm, and I spend much of my time in the woods and fields, for I am a great lover of nature. Our farm is called "Brookside" because of a little brook that runs through it. I am 19 years old and finished high school last year. This year I am staying at home to help mama, but am planning to go to college next year. I would like very much to receive letters and cards from the Cadet boys and girls.—Exie L. Moffit, Knightstown, Ind.

DEAR CADETS: I am a farmer's daughter, 17 years old, and we own a farm of 60 acres. We have a nice country home. I like country life very much better than town. I have lived in the country all my life, but very often I visit my uncle in town. I am a reader of UP-TO-DATE FARMING, and I think it is just grand. It is the most interesting paper I ever read. I enjoy the Cadet letters very much. I will be more than pleased to exchange postals and letters with the Cadet boys and girls, and will answer all I receive.—Hazel F. Matheny, Willow Island, W. Va.

DEAR CADETS: I am a reader of UP-TO-DATE FARMING and like it very much. I can hardly wait until the issues come. I am so interested in the Cadet letters. I am a farmer's daughter, 17 years of age, and live on a small fruit farm just outside of the beautiful city of Muskegon. It is ten minutes' walk from my home to the nearest electric line. I have been living on the farm only three years, but I think it is the place for boys and girls. I was born in the city, but I love the farm. I like the study of nature and I love animals. I am a musician and artist, and I wish to be a teacher of music and drawing. I will be glad to exchange cards and letters with any of the Cadet boys or girls.—Florence Bliss, Muskegon, Mich.

DEAR CADETS: I am another poor little orphan, but almost an old maid, as I was 25 the 9th of January. I am a farmer in a small way, and do all the work myself. I am also a dressmaker, but I make almost as much from my little gar-

Shores-Mueller Co., Dept. 62, Cedar Rapids, Iowa

den as I do from sewing. I have a great many flower seeds of different kinds that I would like to exchange for others with some of the Cadets, or any one else. I have sent cards to several of the Cadets, but never did get but one answer from them. I get dreadfully lonesome sometimes, especially when it is bad weather, and it is a great deal of pleasure to sit down and write a few interesting post cards. We have a great many interesting places here in Texarkana, and I would be just awfully glad to exchange postal views with any of the girls and boys, and I will most certainly answer every card or letter I receive.—Jonnie McKinley, 1014 West Fifteenth St., Texarkana, Tex.

DEAR CADETS: I live on a farm of 75 acres near the West Virginia Falls, which is a fine sporting place in summer for boys and girls. I am 17 years old. The chief crops here are corn, potatoes, wheat, oats, hay and apples. My father has been taking UP-TO-DATE for only a short time, but I think it is a fine paper. Father says he would not be without it. I think the editor should have great praise for thus helping the young people. I go to the graded school at Ona, about a mile from home. I would like to receive cards or letters from every state in the Union, and will answer all I receive.—Mabel Sexton, Ono, W. Va.

DEAR CADETS: Here comes a New Hampshire girl to chat awhile. My papa takes UP-TO-DATE FARMING and thinks it is fine. Ma says she dislikes to see it come when my brother is at home, for he will do nothing but read until he has finished it; but when Ma gets to reading it you may be sure the rest of us are quiet. I have two brothers and a sister all younger than I. I am only 14, but I enjoy farm life, and will be glad to answer cards and letters from all the boys and girls.—Elsie V. Parsons, South Barnstead, N. H.

DEAR CADETS: Will you please allow a Pennsylvania girl of sweet 16 to become a Cadet? I am a daughter of a farmer who lives a mile from Turbotville, on a farm of 60 acres. Our chief occupation is raising corn, wheat, hay and oats. My father gets UP-TO-DATE FARMING and I enjoy reading it very much, for I think it the best paper ever issued. I would be very glad to receive letters, postals or photos from any of the Cadet boys and girls, and will answer all I receive.—Pearl Menges, Turbotville, Pa.

YOU OUGHT TO OWN A BUGGY

Like This Triple Panel Automobile Seat Buggy

We have sold 49,000 of these buggies and every last one of them has given absolute satisfaction. The strongest argument that can be presented in support of any vehicle is that it has proven absolutely satisfactory to the users under the most trying conditions and severest tests. This is the exact standard that all our vehicles live up to. Our Triple Panel Automobile Seat Buggy is a stylish, comfortable, easy running and substantial vehicle that anyone would be proud to own and ride in. In addition to combining all the latest features in design and construction we are offering this vehicle to you at a price that is at least $35.00 less than you would have to pay for a similar buggy from your home dealer.

$59.90

Shipped at Once From Our Warehouse Near You

These buggies are carried in 13 cities throughout the country and are shipped from the city nearest you. This insures prompt service and low freight charges. We owe the enormous growth of our vehicle business entirely to the fact that we build vehicles to last and give absolute satisfaction.

First we satisfy ourselves that our vehicles are the best that can be built and the genuine service resulting from this standard makes satisfied customers.

Sears, Roebuck and Co., Chicago, Ill.

Dear Reader:— Listen to Me!

BELIEVE every word I say, if you will, it will be the most profitable five minutes of your life. I can put you in the soap business, where you can easily make $150.00 per month. Any bright man or woman can make more money working for me than in any other way. I have hundreds of agents making $2,000.00 per year I have always been in the agency business myself and know the business from A to Z. I teach you how to make sales and make you successful. I have made over One Hundred Thousand Dollars selling Washing Machines and many of my old agents have made their pile and retired.

I now have a much better proposition to offer you—one that makes my agents more money, and I like the business better myself. The reason my agents have been so successful is the fact that I do not handle junk, tinware or cheap John goods of any kind that never lead to repeat orders. I give no premiums, but my agents get hard cash for their work and soon have money in the bank. It's repeat orders that make money in any business. Go into any home next Monday morning—you'll find them washing; go to their neighbors, they are washing too—in fact, it's the same thing all over the country. The demand for soap is unlimited and repeat orders never cease. Now, what does this all mean? It means someone is getting the enormous steady profit from your territory, which can be yours.

There is big money in the soap business. I give my agents the big end of the profit—a profit so large that I hesitate to state in this public manner what it is, but will be glad to advise you confidentially when you write me. Suffice it to say for the present that you will be satisfied. I give you a chance to make such a big profit that you'll be more than satisfied with your income and willing to stay with me year after year and be one of my loyal representatives. I personally teach every agent how to make money and make it fast. My plan has been a great success and I'll give it to you FREE. Now, I want to say to every man or woman who is anxious to make money and better their condition, write me. Don't lose a moment's time, but write me at once and address your letter to W. W. TERRIFF, *President of The Wolverine Soap Co.*, 147 Water St., Portland, Michigan.

HOW TO **GET BETTER LIGHT From KEROSENE (Coal Oil)**

Recent test by Prof. Rogers, Lewis Institute, Chicago, and Prof. McKergow, McGill University Montreal, on leading oil-burning lamps show the Aladdin Mantle Lamp is the most economical and gives over twice as much light as the Rayo and other lamps tested. It is odorless, safe, clean noiseless. Better light than gas or electric. Every Aladdin Lamp fully guaranteed and protected by patents in nearly every country on earth. Our burners fit your old lamps. To introduce the Aladdin, we will give

ONE LAMP or BURNER FREE

in each neighborhood. Send postal with name and address, ask for catalogue M. **AGENTS** Ball sold over 1000 on money back guarantee; not one returned. Bruner sold $800 in 15 days. Ask for liberal agency proposition. Sample lamp furnished.

MANTLE LAMP COMPANY, 179 Aladdin Building, Chicago, Ill.

MAKE $21 SATURDAY

Splendid opportunity to make money fast. Sell this startling new invention—just out. Combination Burner and Filler for all Coal Oil Lamps. Complete—two in one. No competition—positively not sold in stores. Makes a big, white, brilliant light on any lamp. No smoke or odor. Saves oil. Fill lamp in one minute. No soiled hands, no slopping oil. Low in price—everybody buys. Big profits. LISTEN:—Johnson, Fla., says "sold one gross last week," profit $40.00. Hess, Iowa, wires, "sold out, ship another gross." No experience needed. Exclusive territory and protection free. Send no money.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

Farming is both manufacturing and merchandising. The farmer is, therefore, both a manufacturer and a merchant.

—o—

The farmer who succeeds as a manufacturer and fails as a merchant, fails in his business. He cannot succeed at all unless he succeeds in both branches of his business.

—o—

The commercial laws that govern success and failure in manufacturing and in merchandising govern success in farming. The same principles underlie. Some farmers do not think about this, but all those who do recognize its truth. Farmers, as a rule, are only fairly successful at the manufacturing end of their business; and few indeed are successful at the merchandising end.

—o—

True, many farmers in every community are well-to-do; that is, they are able to live, pay their bills, and put a little money aside for the rainy day. If keeping alive, and meeting one's bills for necessities is a success, they are successful. But to count success as business men, basing success on business principles, few farmers are successful. Their farms fail to pay good wages for the labor employed, interest on the capital invested; keep up the running expenses; provide for deterioration, and then pay dividends. A farm, to be a success in a business way must do all these things; and the dividends should be equal to those produced by other legitimate business enterprises of like character.

—o—

To be a business success the manufacturer and merchant must produce and sell goods at a fair profit over and above the cost of production, and the farmer must do the same. He must know how to figure his costs. Many a manufacturer or merchant fails because he does not keep his records of costs correctly. Farmers fail to make profits larger because they fail to understand their costs, and to know how to reduce them.

—o—

The farm papers of this country, the experiment stations, the agricultural colleges, and now certain great business interests are trying to help the farmer as a manufacturer. They are spending large sums to teach him true business principles in production; how to increase his output and lessen the cost. This is a great work, a necessary work, and it is being carried forward with as much vigor and persistency as possible. Yet, it is but half the work that must be done before farming is a business success, and farmers are successful as business men. The merchandising end is being too much neglected.

—o—

Increased production is essential only when increased quantities can be sold at profitable prices—prices that makes the business profitable on a successful business basis. Before increased production is to be advocated, a good business man looks forward to his market. This is where the institutions that are teaching the farmers business methods in production fail to meet his needs. The farmer needs an outlet for his surplus—a market that will take it, and pay for it at a figure that makes its production profitable.

As a manufacturer the farmer can stand alone. He can learn how to increase his output, and lower the costs of production without much co-operation. He owns his own factory, does his own work, controlls his own source of supply. As a manufacturer he can be and is independent of his fellowmen. And as a manufacturer, he can learn from the experts in his line the most economical and successful methods of production. But as a merchant, it is an altogether different problem.

—o—

To sell farm products at a profit to the farmer, there must be a system of marketing and distribution. There can be no system without co-operation. There can be no successful co-operation until there is first an adequate and efficient organization. Therefore, two things are very clear: The farmer cannot succeed as he should unless his marketing interests are properly attended; and the only way he can do his marketing on a business basis is through co-operation and organization. He must put himself in position to succeed as a merchant.

—o—

The production is being taken care of by the papers, colleges, experiment stations and others. It is in capable hands. The farmer need have no concern about this end of his business. He can have at his command all the knowledge of ages of experience to help him in producing. If anything at all is lacking it is means to apply the knowledge. Sometimes it requires money to make these improvements in production. Here is where the marketing end is indispensible: If he cannot sell his crops at a profit, he cannot make the necessary improvements.

—o—

To make his merchandising, or selling, a successful (profitable) part of his business, the farmer can not stand alone. He can not be independent. He can not accomplish this without the co-operation of his fellow farmers. No agricultural college or experiment station can do it for him, or show him how he can accomplish it alone. He must take what the market offers, be it much or little. But by having a system, built on sound and successful business principles, owned and controlled by an organization composed of farmers, then he can become a successful merchant, because the merchandising of his products will be put on a business basis through an organization of which he is a member.

—o—

The Farmers Society of Equity is the means whereby the farmers of this country can complete their business education, and make business success for the producers possible.

—o—

Reader, your own self-interest lies in the success of the co-operative marketing system. Until it is perfected, until it has a local union in your locality, until the farmers of your community and county are taught the principles of successful merchandising of their products, both you and they will continue to suffer losses that keeps you from being successful in the degree that you deserve to succeed.

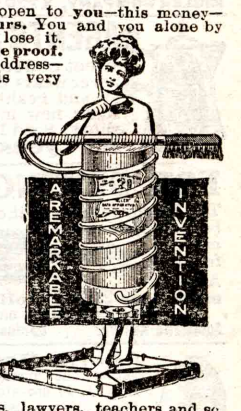
—o—

The Farmers Society of Equity teaches clearly how to succeed in the marketing of farm crops. It supplies the missing link, without which the

$1200.00 IN COLD CASH

Made, Paid and Banked in 30 days, by Stoneman—$15000.00 To Date

Reader, this offer is open to you—this money—the cold cash—can be yours. You and you alone by waiting too long can lose it. Investigate today—get the proof. Send your name and address—but NO MONEY—this very minute.



$1000.00 PER MAN PER COUNTY

Don't worry—don't find excuses—no experience is necessary—business supplies the capital. You don't have to wait a month—not even a week—payments can start the first day—and continue daily up to $1000.00 per month, per county. For years we have been quietly picking men from all walks of life, ministers, clerks, farmers, preachers, doctors, lawyers, teachers and so on—enabling them with our co-operation and $50,000.00 appropriation to get what we here offer and can do for you—$1000.00 per man, per county. Some of these men you may know—possibly have envied without understanding the reason of their prosperity.

INVESTIGATE AND BE AMAZED Demand absolute proof—accept no other kind. Either we have the best thing that ever happened or we're colossal liars. Ask Schleicher, minister, whether it's true that he received

$195 TWELVE HOURS AFTER APPOINTMENT;

Langley, liveryman, $115 first day; Rasp, agent, $1685 in 73 days; Beem, solicitor, $164.25 weekly for 12 weeks; Korstad, farmer, $2212 in a few weeks; Zimmerman, farmer, $3856 in 20 days; Juell, clerk, $6800; Hart, farmer, $5000; Wilson, cashier, $3000 in 30 days. Let us refer you to these men, to the U. S. government to banks, business houses, noted people at home and abroad. Heed this caution from Chas. Starr, of Mich., who writes, "Sorry this field is closed. Should have acted sooner but was skeptical. Your local man's great success has set everybody talking and proves I was a chump. Wonderful what a man can do with a real opportunity." Then read this from Lodewick who acted quickly: "Lucky I answered ad. It's great. Money coming fast." Which will you be, Starr, a victim of "neglected opportunities" or Lodewick, the "early bird." To escape Starr's fate, send your postal this very minute—

SPEND ONE CENT TO MAKE THOUSANDS.

Strange invention startles world. Gives every home that long-desired blessing, a modern bathroom with hot and cold running water facilities for only $6.50. No plumbing—no water works—self-heating. Only ten minutes to install. Gives cleansing plus friction, massage and shower baths in any room. Equivalent to any $200 bathroom. Over 200,000 delighted users. Used by U. S. government.

More remarkable than this invention is our startling plan of universal distribution through special representatives who become virtually profit sharing partners in a business that's immense—exciting—fascinating—dignified—and above all, has enabled them, will enable you, to get $1000.00 per month, per county. Asking to be shown doesn't obligate you one bit. Investigate today by all means.

S. E. FERRY, Indianapolis

chain of success cannot be complete. When farmers in a community form themselves in a local union of this Society, they are taught how to make co-operation an effective and profitable part of their business. This knowledge is just as essential to success as the knowledge of the secrets of successful production. It is not taught in schools or colleges. It is not demonstrated by experiment stations. It is found only in the teaching and business operations of this great body of organized and co-operating farmers.

—o—

Not alone does this Society teach the principles of business success in marketing farm products, but it teaches the practise. The best place to learn law is in the lawyer's office practise, and in the courtroom. The best place to learn medical practise is in the doctor's office and with his patients. The best place to learn the blacksmith trade is in a blacksmith shop. The best place to learn farming is on a farm, and the best place to learn how to sell farm crops co-operatively is in a co-operative farmers' organization that is practising what it teaches.

—o—

Every community of farmers must have a local union of the Farmers Society of Equity. This is the slogan of all the present members and officers of this Society. Every community needs it, for its work is necessary to successful farming.

—o—

On this page is a blank. There are at least sixteen farmers in each community who will recognize the truthfulness of this message, if you carry it to them. We want their names. Will you help this work along, brother farmer, by filling the blank with names and addresses of farmers living in your neighborhood, and help us to arouse them to their needs and opportunities? Send us the names of good men, and let this good and great and necessary work go forward with all speed.

— — — — — — — — — THIS IS THE BLANK — — — — — — — — —

FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them would be glad for improvements in our system of marketing.

These people market mainly at the town or city of.....

(As the F. S. E. is a business organization local unions are organized only at the places where the marketing is done.)

WILLIAM GALLOWAY. Pres.

Shipped FREE!

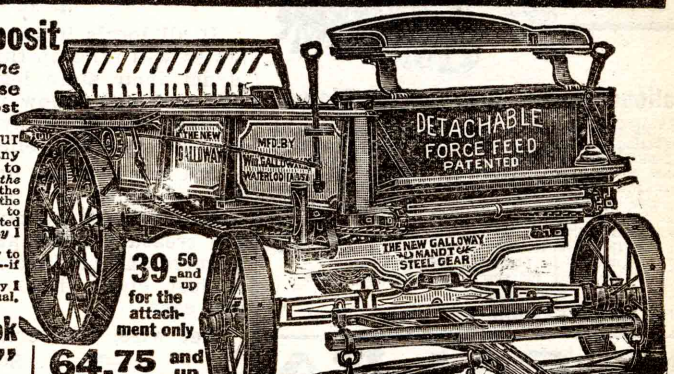
Yes, ABSOLUTELY Free—Not One Cent Down—No Bank Deposit

I don't want you to send me one cent for this spreader. No sir, *not one cent.* I don't even ask you to sign any mortgage, lease or note or even promise to buy it. I won't let you take *any* risk of any kind or nature. I'm making the most daring offer I've ever made and I'm banking on *my* spreader *and your judgment.*

Here's my plan: I'll ship you one of my new 1913 Model Galloway Spreaders right to your farm without even a dollar's deposit. I want you to take that spreader and test it in a way that would put any other spreader in the world on the scrap heap. I'll even tell you how to do it. Hunt up the toughest manure to handle you can find. If you've got any heavy, tramped-down, unrolled, frozen slough hay manure in your calf yard, *that's just the stuff to use.* If you can't find anything tough enough on *your* farm, get a load from one of your neighbors, let him watch the test, too. Drive out into the field; *get your team on the gallop* AND SLAM IT IN GEAR! Don't you worry about smashing the machine--*remember, it's a Galloway you're using now.* Besides, I'm taking the risk--*not you.* I've been putting the Galloway to tests like this for seven years. 40,000 farmers besides myself know what the Galloway will do. Study out the exclusive patented features--the things that make it easy for the Galloway to do things that would *wreck* any other machine in the world. See *why* I can make this offer, *why I can guarantee it for a lifetime and back that guarantee with a $25,000 bond.*

Take a month to make up your mind--use the spreader all that time anyway you want to. Then, if you can't honestly say to me: "Galloway, your spreader is better than I ever thought a spreader could be and I don't see how I can get along without it"--if you can't say and mean every word just sent it back to me and I'll pay the freight *both* ways so you won't be out a cent.

If you want to keep it, I'll absolutely guarantee to save you $25 to $50 on the very *best spreader in the world.* That's why I say: "The Only Way is the Galloway". Selling direct from factory to farm, every middleman's profit cut entirely off; the actual, net factory price with just one small profit added.



39.50 and up for the attachment only

64.75 and up for the complete outfit

Here's What Your Neighbors Say:

Gentlemen: I received the spreader all O. K., and have it now nearly six months. I have never had any trouble with it at all and I like it very much. I would not be without one now for a great deal. My team weighs 2200 pounds and will handle it even on plowed ground. This morning I spread a load and there was two inches of snow on the ground, but the wheels did not slip, even without the mud lugs.

Yours truly
Killawog, N. Y. *Walter Ensign.*

Dear Sir: I received your wagon box spreader and am more than pleased; it does the work far better and is much easier on the team than I expected. My little mules handle it easily and they only weigh 900 lbs. The farmers come from all around to see it work and they all say they are going to have one of them.

Yours truly
Navina, Okla. *F. J. Robinson.*

My Special 1913 Offer

I've got a new proposition for 1913 that's so much bigger and more liberal than anything I've ever been able to offer before that there's simply no comparison. Listen—if you decide to keep the Galloway after having had the free trial, I'll tell you how you may get it partly or entirely free. No canvassing—no soliciting. Just the fairest, squarest, straightest, cleanest co-operative offer that anybody ever made. I can't explain it all here and I won't try to. But I'll tell you all about it in a personal letter if you'll write me right away.

My Regular $1.00 Book "A Streak of Gold" Sent FREE

Nothing else like it ever written. Tells plainly just how to produce manure, store it, treat it, care for it and use it. This book is worth $25.00.

Price regularly one dollar a copy. I'll send it to you free in addition to a full explanation of my record-breaking, 1913 proposition and my big spreader catalog so you can pick out just the spreader you want me to send you on this free offer. A postal or letter is enough. Don't lay down this paper 'till you've sent it.

Wm. Galloway, Pres., WM. GALLOWAY CO.

The Traveler

Under this head appears accounts of what our "Traveler" sees, hears and otherwise discovers. He can not, unfortunately, visit every section and locality, and those whom he can not see he most earnestly desires to hear from occasionally. This applies to every reader of this paper who is interested in the plans of the Farmers Society of Equity. Write to "The Traveler." Write today and address your correspondence to

"THE TRAVELER'S DESK"
CARE THE FARMERS SOCIETY OF EQUITY
INDIANAPOLIS, IND.

TO THE TRAVELER:

Your readers as well as your Editor may be interested in the following:

On December 26 a mass meeting of the voters of the county was called by state senator-elect to consider needed legislation. Among recommendations submitted was one for "rural credits." Objection was made and an animated discussion followed, resulting in the appointment of a committee of three to consider conditions, causes and a remedy. This committee met on December 31, after considerable discussion of various measures the following was agreed to.

TO THE SENATOR AND REPRESENTATIVES ELECT FOR BONNEVILLE COUNTY, IDAHO:

Your committee appointed to draft resolutions concerning "Rural Credits," for you to present to the lisligative body to which you have been elected, largely through the votes of the farming population of this county, beg to hand you the following, with the admonition, that as you hold your positions by and through our votes which we gave you with the idea that you would represent us and our interests, therefore, as these resolutions express not only the interests of the farming population, but of all useful people, we expect you, each and all to use your utmost endeavors to carry out our will.

We are tired of giving up the wealth we produce to capitalize the non-producer, therefore,

Resolved, First, All currency whether gold, silver or paper must be a full legal tender issued by an act of Congress and distributed through government banks as postage stamps are through the post office.

Second, Loans to be made through government banks on productive farm real estate at a rate of two (2) per cent. per annum.

Third, The adoption of a graduated income tax, the increase of the rates of the present corporation tax and the extension of inheritance taxes, graduated in proportion to the value of the estate and to nearness of kin—the proceeds of these taxes to be employed in the socialization of industry. Provided that no legatee shall be allowed out of any estate over three million ($3,000,000) dollars.

Fourth, If a commission on Public Utilities be established by statute, said statute should provide that a majority of said commission shall be actual farmers. That members of said commission each shall be allowed by the state, a mileage of two (2) cents per mile for each mile necessarily traveled in pursuance of duties imposed by law, and no other mileage be allowd by the state and a penalty of loss of office and a fine be provided for accepting free mileage or passes from any other source.

Fifth, That a legal rate of usury or interest be provided not to exceed eight (8) per cent. per annum.

All of which we submit to you as individual members, and further, to the body of which you are members. The first, second and third resolutions after your approval as a body, to be forwarded to the United States Congress through the man whom you elect as United States senators, after first securing their pledges to work for the passage of laws by Congress to put these resolutions into effect.

R. A. SOUTHWORTH.
C. J. CASLON.
A. H. BEASLEY.

If all locals in all the counties and states will take up this matter and instruct their state legislatures to this end and will follow up with petitions or demands signed by public generally we will get some relief from Congress.

If Uncle Sam can print "bank notes" for one-fouth of 1 per cent., for national bankers, he can print legal tender treasury notes at 2 per cent. for farmers and producers. Two per cent. is just eight times one-fourth of 1 per cent.

Get wise, brothers.

—R. A. SOUTHWORTH.

Our Champion

"Farming needs a champion. Up-to-Date Farming seems to be the only one that understands our needs."—Stein.

EQUITY CLEARING HOUSE FOR OREGON

ABOUT fifteen members of the Farmers Society of Equity; which now has a considerable membership in Multnomah, Clackamas, Washington, Marion and Yamhill counties, met in rooms of the Portland Commercial club and decided that the time was ripe for the organization of a corporation, to establish a clearing house and warehouse for the Portland district.

A committee of three of the most active members was appointed and funds were raised to incorporate a company for $10,000.

This committee has already with the advice of a competent attorney, prepared for filing the articles of incorporation and is at work on the by-laws, which will be presented for the adoption at the first stockholders' meeting.

The committee will soon begin taking subscriptions for this stock and the secretaries of the various local unions, of which there are about thirty in the aforementioned counties, will be asked to aid in this work.

The stock will be divided into shares of $5.00 each and sold only to members of the Farmers Society of Equity.

Two New County Unions

Boone County, Indiana, comprising the locals of Advance, Whitestown, Lebanon, Gadsden and Hazelrigg organized a county union at Lebanon, on January 11th, with the following officers: Robert Stephenson, of Lebanon, president; A. O. Dulin, of Whitestown, vice-president; corresponding secretary and treasurer, W. J. Sanford, of Lebanon; recording secretary, R. J. Riner, of Advance. This county union will meet regularly on the second and fourth Saturdays of each month, at Lebanon, at 1:30 o'clock.

* * *

Over one hundred enthusiastic delegates and members from the locals of Clackamas, Mt. Pleasant, Eagle Creek, New Era, Maple Lane, Sunnyside, Damascus, Boring, Beaver Creek and Carus locals met in Oregon City and founded a strong county unit. This work is under the direct supervision of National Organizer Cutting, who intends to organize a state union in Oregon before leaving that state for other fields.

To the Unorganized Readers of Up-to-Date Farming

This society came into existence some five years ago in the city of Indianapolis, Indiana, and is incorporated according to the laws of that state.

Our brother, J. A. Everitt, at the head of this great organization, saw that the national banks and the state banks, the private banks and the trust companies were all combining for the purpose of gain. Also Congress saw that the boards of trade and the commercial world were all organized and becoming exploiters of the producers of the land. And he also saw that the Wall street gambler and the wheat and corn pit gamblers, and the devil and all of his angel gamblers, and the rest of the world that is living on ill-gotten gains, and the United States Congress were all aboard their boats just across that gulf where the rich man did and will call on the good old farmer to bring them some water to cool their parched tongues.

Now, my brother farmer, let us come together and organize ourselves into the Farmers Society of Equity and help to set up our boards against this greed for gain. I tell you, my brothers, we are living in a wicked world. Everybody is in a hurry trying to get that dollar. It makes no difference how they get it, just so they get it. Oh, Heaven! have we lost the good and patriotic spirit of George Washington? Let us get down on our knees and pray to God to bind that old serpent—Speculation—for a thousand years so that we can rest with ease for a little season.—G. W. Mathis, Fordyce, Ark.

Deaf People Hear Whispers

With Common-Sense Ear Drums—"Wireless Phones for the Ears."

For twenty years the Common-Sense Ear Drums have been giving good hearing to hundreds of thousands of deaf people, and they will do the same for all who try them. Every condition of deafness or defective hearing is being helped and cured, such as Catarrhal Deafness, Relaxed or Sunken Drums, Thickened Drums, Roaring and Hissing Sounds, Perforated Drums, Drums Wholly Destroyed. Discharge from Ears—no matter what the cause or how long standing the case may be, there is hope of good hearing for all the afflicted deaf. The Common-Sense Ear Drums are made of soft, sensitized material, comfortable and safe to wear. They are out of sight when worn, and easily adjusted by wearer.

Good hearing brings cheerfulness, comfort and sunshine into the life of the lonely deaf.

It is certainly worth your while to investigate. Just drop me a line. I want to send you free of charge my book on deafness.

GEORGE H. WILSON, President
WILSON EAR DRUM CO., Incorporated
891 Inter-Southern Building, Louisville, Ky.

Ruptured People—Get This On 60 Days Trial

You know you can't possibly tell anything about a truss or anything else for rupture merely by trying it on, for a truss or so-called "appliance" may seem all right at first and afterwards prove utterly worthless.

But here is something you can try sixty days—just as a test—without having to risk a single cent.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

DEAR EDITOR:
Of all the articles printed in Up-to-Date Farming, I like those under the heading, "Evolution in Marketing." We farmers need more help on the subject of marketing than we do on the subject of production. I think nearly all of the readers will express themselves the same as I have. I wish for Up-to-Date Farming the greatest success and a very wide circulation.—Henry Hess, Linn, W. Va.

—::—

DEAR EDITOR:
I am very much in favor of having more space given to reports of co-operation in marketing in Up-to-Date Farming in preference to articles on increased production.

I am convinced that co-operation in marketing is the only way to bring prosperity to the farmers and maintain it. Since the boll weevil has made the cotton crop of the south uncertain our farmers have turned their attention more to the raising of fruits and vegetables. These products, however, must be marketed quickly and here is where the farmer loses. Lack of knowledge of where the demand is and the ability to direct the produce there, results in glutted markets and ruinous prices. It is either take what can be gotten, or let his crops waste in the fields after they are produced. I have known of large fields of onions which were allowed to rot in the fields because the price was not sufficient to pay for gathering them. Potatoes are oftentimes fed to hogs, because there is no apparent market for them. Chickens, butter and eggs have a way of falling in price, just when the liberal production comes, with the result that farmers are constantly going into and out of the business. And this is clearly the fault of the marketing system. But, with such conditions prevailing here, I know of city markets not more than one hundred and twenty miles away where high prices are paid.—G. Brandes, Clifton, Tex.

—::—

DEAR EDITOR:
Up-to-Date Farming is better now than it was before, because it is giving more thought and attention to marketing crops. This is what the farmers need. Farmers will certainly need to co-operate before they accomplish their goal for better prices and profitable farming. The proposed federation of farmers' associations is an excellent idea and I hope it can be brought about. It seems to me that Up-to-Date Farming is doing all in its power to help farmers.—A. E. Dean, Trumansburg, N. Y.

—::—

DEAR EDITOR:
If either of the departments in Up-to-Date Farming are to be sacrificed or curtailed, let it be the one on production of crops. There are several reasons for this. In the first place, your publication is the only one devoted especially to the marketing side of the farmers' business; therefore, it should naturally give more space to articles on co-operative marketing. Second, it is reasonable to believe that the more farmers are educated about co-operative marketing and shown the benefits that must come through it, the more they will be in a position to use a co-operative system of marketing. The main cause of the high cost of living and the low prices to farmers for his produce is the careless system of marketing now in vogue. Cotton is largely rushed to the market as soon as gathered; thus there is an immediate glut and the prices are put down. It is true that some of the farmers cannot hold their cotton and they are thus forced to market to pay their debts, but a union of the farmers rightly managed would provide a remedy even for this. And as it is with cotton, so it is with other crops. Markets are glutted, prices are lowered and the farmers suffer. A system such as Up-to-Date Farming advocates would avoid all of this. Farmers would be more contented because they would be better off financially. Let us hope that the day will be soon when farmers will realize all of this and set about it to come into their own.

The Farmers Society of Equity is moving in the right direction, and my wish is that it will accomplish its purpose and secure a distributive system for farm crops that will protect the farmer in his labors and give him a just reward.—Eugene Ethridge, Ivey, Ga.

—::—

DEAR EDITOR:
I think your articles on the "Evolution in Marketing" are fine. Every farmer in the county ought to read them. I can see how a federation of farmers and a universal farmers' organization would bring about a condition that would assure us better prices for our produce. We farmers here in Colorado often times do not get enough to pay us decent wages for our labor. I for one can see that before times will will be better we have got to stand together in our own interests.—A Putnam, Agate, Colo.

—::—

DEAR EDITOR:
There is no subject in my estimation that better deserves space in Up-to-Date Farming than that of co-operation in marketing crops. On this subject, although I am new at farming, I can speak from bitter experience. From this town last spring there were shipped thirty-three cars of fine cucumbers and when the books were closed we found that we were in debt to the sum of $1,000. So there is no wonder that I am in favor of giving plenty of space to the above mentioned subject.

The whole trouble was nothing more or less than lack of co-operation and the right system in marketing. It is absurd for any people to ship carloads of any kind of truck or fruit unless properly advised as to whether the points shipped to are supplied or not. Practical co-operation and system does away with foolish plunging and enables each market to have what it needs, thus obviating losses that should be unnecessary to the growers.—R. M. Banville, Summerdale, Ala.

—::—

DEAR EDITOR:
I prefer that more space in Up-to-Date Farming be given to reports of co-operative marketing, even if it is necessary to sacrifice some of the space now given to the articles on production. I am greatly interested in the articles "Evolution in Marketing." Notwithstanding that I believe we farmers have much to learn yet about production of crops, I am sure that the most serious question now is "How can we market our produce to always insure a profit."—J. Sanford, Lebanon, Ind.

DEAR EDITOR:
I became a subscriber to Up-to-Date Farming only last March and I have regretted many times that I did not know of this paper years ago and have been a steady reader of it, because Up-to-Date Farming has been very beneficial to me in marketing my farm crops this year. I now see farming in a light that I have not seen it before. Speaking for myself, I feel that it is to my interest that as much space as possible be taken for articles on marketing like under the heading, "Evolution in Marketing." If there is anything that will be helpful to farmers at the present time, it is improvement in our marketing system. I am constantly urging my friends to subscribe for Up-to-Date Farming.—S. L. Reid, Reidsville, N. C.

—::—

DEAR EDITOR:
I would prefer to have more space given to reports of co-operation in marketing. I would particularly like to have some articles on co-operation in marketing poultry and eggs.—Miss Cora Cleveland, Geneseo, N. Y.

—::—

DEAR EDITOR:
I would prefer more space taken up for the reports of co-operation in marketing. I was very much interested in the article "Evolution of Marketing" and would like to hear more on the same subject.—E. E. Murphy, Denmark, Iowa.

—::—

DEAR EDITOR:
I think Up-to-Date Farming is one of the best papers ever published, as it gives the farmers such valuable information. I consider the space given to reports of co-operation in marketing as being of the most advantage. I read the articles under the heading, "Evolution in Marketing" and find them very interesting and valuable.—R. E. Reed, Degraff, Ohio.

How to Improve Up-to-Date Farming

DEAR EDITOR:
On your request I will say that in my estimation UP-TO-DATE FARMING would be improved: First, by adding one or two short stories each issue; second, by running a girl's advice column; third, by printing some of the latest styles and patterns. At present you haven't much of interest to the Farmers Society of Equity ladies, and I think if you would have, it would be a great help.—Mrs. Myrtle Vosburgh, Perkins, Okla.

A CO-OPERATIVE LAUNDRY

AT CHATFIELD, in Fillmore county, Minn., there was recently put into operation the first farmers' co-operative laundry ever established in this country. It was built in connection with the co-operative creamery, and the officers of the creamery are its managers. The power plant of the creamery is utilized for the operation of the laundering machinery, while the waste steam from the boiler is sufficient to heat the water needed in the washing operations. It would seem that a laundry organized on a basis such as that outlined ought to succeed, while if there is any class of women that are entitled to relief from the work connected with weekly washing it is those who live on the farms. The experiment at Chatfield will be watched with interest. It is to be hoped that it may be duplicated in other communities which have co-operative creameries.

$80 Per Month Straight Salary and expenses, to men with rig, to introduce Poultry Remedies. We mean business. Eureka Poultry Food Co., D 608 E. St. Louis, Ill.

FOR BIG RESULTS

Learn Horse-Training —Make Big Money!

$1,200 to $3,000 a Year—at Home or Traveling

Prof. Jesse Beery

Send Coupon for "Horse-Trainers' Book" FREE

Prof. Jesse Beery, known from one end of the country to the other as the World's Master Horseman, having retired from the arena with an independent fortune, is giving the world the priceless secrets of his marvelous success. A copy of his wonderful "HORSE-TRAINERS' PROSPECTUS" will be mailed, free of charge, to all who are ambitious to master this highly profitable and intensely interesting profession.

Vast Audiences Thrilled by Beery Exhibitions

The thrilling exhibitions given by this King of Horse-Tamers and Horse-Trainers have never been equalled. His mastery of fierce, man-killing stallions, without whip, curb bit or other cruel devices, has astounded the world. The most unruly horses—kickers, tricksters, balkers—subdued while multitudes watched, wondered and applauded. Medals, trophies and honors of all kinds, showered upon Prof. Beery by admiring thousands, bear eloquent testimony to his matchless skill.

Learn Beery System by Mail, at Home

Bang! Bang! Bang! "Who's Afraid?"

The Beery Correspondence System of Horsemanship is the only instruction of the kind in the world. The lessons are simple, practical and complete. Learn in spare time, right at home, to take the most vicious horse and subdue him in a few minutes. Prof. Beery can teach you how to break any horse of bad habits—teach a horse to drive without reins. How to tell the disposition of any horse on sight—judging a horse right the first time! How to cure shying, kicking, biting, balking, fear-of-automobiles-and-trains and all other bad traits forever.

Break a Colt in 8 Hours!

The lessons in Colt-Breaking alone are worth the price of the entire course. You can train a colt, in 8 hours, to be absolutely trustworthy. There is big money in breaking colts and curing horses of bad habits.

Graduates Making Big Money

For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy *a home and an automobile* solely through earnings from training horses as taught by your excellent methods."

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

Coupon Brings Prof. Beery's Great "Horse-Trainers' Prospectus" FREE

If you want to get into a big money-making profession—if you own unruly horses with bad habits—if you enjoy travel—if you are a natural-born trader and can buy cast-off horses cheap to sell at big profit when trained, send now, today, for this grand Free Horse-Trainers' Prospectus. Tell me all about your horse. (42)

THE CARTOON ON THE COVER

THE farmer is the center of attraction nowadays. Columns of city and country newspapers are devoted to problems affecting his welfare. Coming to his support, and reinforcing the efforts of the Department of Agriculture, and the experiment stations and colleges, are many noteworthy and powerful institutions. Congress and state legislatures give freely in laws and appropriations whatever they believe will augment the farmer's prosperity.

Yet, in the midst of all these friends, all good-intentioned, holding out hands meant in all sincerity to be helpful, the farmer stands bewildered and disconsolate.

The reason may be perfectly clear to the casual observer. This year's crops are the largest in history. This year's profits are the smallest in years. When the farmer counted his crops he was happy; when he counted his cash he was puzzled and chargined; when he hears the voices of his advisers urging yet larger production, he is mystified, and when the dealer who purchases his products informs him that the price is low because he produced too much, he wonders what sort of friendship it is that urges him to produce yet more.

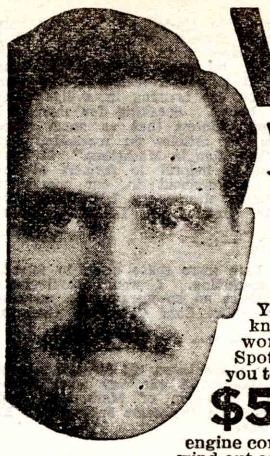
The farmer is really in a bad fix, but the helping hands outstretched cannot pull him out and he knows it. He needs assistance at the marketing end, and he knows that. It is as clear to him as two and two make four. But he does not know how to bring the necessary reforms about.

Get together, gentlemen; first help the farmer to market his products at profitable prices. Unless this is accomplished all other means must fail.

THIS PROBABLY MEANS YOU
Special Notice

We want a representative in each community to see all of the farmers and get their subscriptions for Up-to-Date Farming. We also want subscription solicitors in larger fields, and we call the attention of professional subscription canvassers to Up-to-Date Farming. They will find it a paper that they can secure a subscription for at nearly every farm home, because it is the only one that makes a specialty of the marketing side of farming, against about four hundred that are devoted to the producing side. Farmers are coming to understand that they must have the doctrine and plans of marketing preached and taught to them as much as for producing. For terms, address

UP-TO-DATE FARMING, Indianapolis.



WHY NOT
Write Galloway Today?

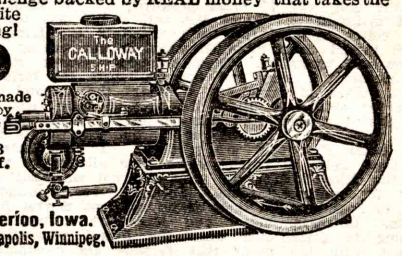
WHAT about? E-N-G-I-N-E-S!! You need a Galloway 5 H.P. right this minute, but you needn't sell your cheapest horse to buy one, for I will not only save you $115.50 on the price but will trust you for it besides. Who will do as much for you as Galloway?

WHY should you buy an engine from any one but me? My factories are greatest—my engines best by actual test—prices lowest for quality—free trial and payment terms most liberal.

You know me. For years you have read about me in this paper. You know how my business has grown from a "shoe-string" up to the world's most colossal factory-to-farm success. You know the $25,000 Spot Cash Bond that guarantees every Galloway Engine. Now I want you to know Galloway's startling new 1913—

$5,000 Challenge

The sensational defy that Galloway casts in the teeth of every engine competitor—a REAL challenge backed by REAL money that takes the wind out of every hostile sail. Write me for this $5,000 Challenge. It's mighty good reading!



Save $50 to $300

Why should you hesitate when you can get the best engine made at a saving of $50 to $300? I guarantee you this saving backed by the Galloway $25,000 Satisfaction Bond. You simply can't take any chances when you deal with me. A penny postal brings my splendid big Engine Book in 4 colors, and amazing Special 1913 Offer that knocks the spots out of anything you ever heard of. Mail that letter or postal today, SURE!

WILLIAM GALLOWAY, President
William Galloway Company, 505 Galloway Station, Waterloo, Iowa.
We carry stocks of engines in Chicago, Kansas City, Council Bluffs, Minneapolis, Winnipeg.

TRUSS WEARERS

FREE attention: The PLAPAO-PADS are different from the truss, being medicine applicators made self-adhesive purposely to hold the parts securely in place. No straps, buckles or springs—can not slip, so cannot chafe or compress against the pubic bone. Thousands have successfully treated themselves at home without hindrance from work and conquered the most obstinate cases. Soft as velvet—easy to apply—inexpensive. Awarded Gold Medal. Process of recovery is natural, so no further use for truss. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TO-DAY.

TRIAL OF PLAPAO
Address, PLAPAO LABORATORIES, Block 59, St. Louis, Mo.

Prevents hair falling.
50c. and $1.00 at Druggists.

ALSIKE

Hardiest clover grown. Will not freeze out; resists drouths. A sure cropper. Crop is fine for bees; hay is excellent for stock. Sow now for next year. One bushel will seed 12 to 15 acres. Write for latest quotations.

O. K. SEED STORE
Indianapolis, Indiana

Organizers

THE Farmers Society of Equity wants an organizer in each community. A local union must be organized at each market town and city or shipping station. We have an exceptionally good proposition for the right person. The right person is any man who stands well among his neighbors and wants a better marketing system established, as well as the ability to buy everything at wholesale prices.

Hundreds of organizers who succeed locally will be given a larger field. If you want to employ part, or all of your time profitably, write for our terms.

A post card or letter will bring full particulars by return mail. Don't delay. Every field should be occupied.

Farmers Society of Equity
Indianapolis, Ind.

The Shoe With the Sole of Steel
Ten Days
FREE

FREE BOOK

Let me send this book to you by mail postpaid. Read it and learn more of this great shoe with the sole of steel—the she with the light, springy, airy "step"—the shoe that rests your foot naturally and comfortably, always holding its perfect shape—never a "rundown" heel, broken arch, warped sole, worn toe, twisted uppers, or cracks and leaks. Before you think of buying a pair of work shoes, get this great book of shoe facts and learn about this wonderful footsaving sole of seamless steel. Do not think of turning this page until you have sent for this free book.

I Want to Know Why YOU Have Not Sent for YOUR Pair of These Shoes on 10-Days' Free Try-on in Your Own Home

N. M. Ruthstein
The Steel Shoe Man

I want to know why you have hesitated—why you have held back—in the face of my open, frank, man-to-man offer to let you try a pair at my own risk, without your taking a chance or running the risk of losing a single penny.

I don't know how I could offer you anything more than that. I don't know how I could better offer to prove to you the absolutely wonderful advantages of this shoe, than to let you put them on your feet and try them for ten days at my risk.

Over a million men in all occupations have tried, tested, used and proved the actual value of this wonderful shoe with its light, springy, sensible sole of seamless steel.

I Want to Let YOU be the Sole Judge

I want to leave it wholly and entirely up to you to say, from your own trial and examination, that this shoe will preserve your feet, protect your health, and save you the money that you now waste in continuously buying the old, heavy, leaky, warping, unsanitary and painful leather-soled workshoes that look bad, smell bad, feel bad, and wear out every few months at the very best.

I Can Save Your Feet and $10 to $20

I can do this because I have done it for a million others. I can do it because I have created a shoe that is comfortable, dry, sanitary and economical—

Because each pair will outlast three to six or even eight pairs of best quality all-leather work shoes. Furthermore, there are no repairs—no loss of time or trouble of any kind. This shoe is made for comfort and made to last. The soles and sides (as shown in illustration) are stamped in one seamless piece from light, thin, springy steel, secured firmly to the uppers, which are of the very best quality soft, pliable leather—absolutely waterproof and almost indestructible. The soles are studded with adjustable steel rivets, which give perfect traction, firm footing, and protect the soles from wear. The rivets themselves (which take all the wear) can be quickly replaced when partly worn. The cost of these is almost nothing—50 adjustable rivets for but 30 cents, and they will keep the shoes in good repair for from two to even three years.

Abolish Corns, Blisters, Bunions and Callouses

This shoe will give you absolute foot comfort because it has absolute foot form—and the sole being steel, it cannot warp, twist or draw out of shape. Consequently corns, bunions, callouses, etc., cannot be irritated and no portion of the foot rubbed so as to start new miseries of this kind. You know very well that a perfect fitting shoe never made a corn in the world—and you also know that an all-leather shoe cannot fit after it has a twisted, broken sole, that allows the uppers to crease up into galling wrinkles.

Save the Arch of Your Foot

As soon as a leather sole becomes wet and slightly worn, the arch gives way and flattens out—immediately endangering the very life and service of your foot. In this shoe the steel arch cannot break or get out of shape—it is a continuous, elastic restful support—always remaining exactly the same during the entire life of the shoe.

Parcels Post Will Bring These Shoes to Your Door

Through the new system of our National Parcels Post, you can now have a pair of my shoes delivered right to your home. You do not need to go to town or to the express office after them—and as the capacity of my great Racine factory alone is now far above 5000 pairs a day, shipment will be made the day your order is received, and you will have the shoes on the wings of the U. S. Mails.

Banish Wet Feet, Colds, Chilblains, and Rheumatism

With this shoe you can work all day in mud and water—and your feet will remain powder dry. It is an absolute protection to your health. You escape colds, rheumatism, neuralgia, the dreaded pneumonia, and the long list of ills and dangers that result from damp or wet cold feet. In fact, these shoes pay for themselves again and again simply by preventing sickness—saving doctor's bills, and allowing you to work in weather in which you would not otherwise dare to leave the house.

Lighter Than Leather

This firm, yet springy, elastic tread gives you an ease and lightness of step and comfort that delights your feet, and gives your whole body a resiliency that lifts the pain and burden from the work of the day. You can stand more, walk more, do more, earn more—and live longer in perfect muscular health and strength.

Join the List of Happy Users

Become a Knight of the Steel Shoe. Save yourself and save your money. Farmers, miners, smelters, railroad men, hunters, and all workmen raise to the skies their praise of this shoe with its wonderful, yet simple, sensible, sole of steel. Break away from traditions that have cost you pain, loss of time and unnecessary expense. Accept this proposition that I have made to prove to yourself the comfort, the economy of this shoe.

Amazing Success

Indeed, the success of this shoe has been truly amazing—for within four years I have found it necessary to establish great factories in Racine, Wisconsin; Toronto, Canada, and Northampton, England, to meet the demand which has arisen in such tremendous volume from all over the world. This astounding growth is the result of good words spoken by delighted wearers to their friends and neighbors, and because I have not been afraid to place my shoe upon any man's foot to absolutely prove for it every word and every claim that I have made. This same proposition is made to you today. Do not delay. Do not put it off. Do not think about buying a pair of workshoes without learning all about this wonderful shoe with the sole of steel.

New 1913 Models in All Sizes—For Men and Boys

For men in sizes 5 to 12—6 in., 9 in., 12 in. and 16 in. high. For boys, sizes 1 to 4—6 in. and 9 in. high. They cost no more than ordinary all-leather workshoes.

A Genuine Rupture Cure Sent On Trial To Prove It

Don't Wear A Truss Any Longer

After Thirty Years' Experience I Have Produced An Appliance for Men-Women and Children That Actually Cures Rupture

Are You Ruptured?

If so, the BROOKS APPLIANCE is made for You; You and all other Men, Women and Children who are sufferers from this annoying and dangerous trouble. That truss you have been wearing—one of the many you have tried—chafed and irritated you and was worse than nothing. It had springs and pads and harness and straps and fixings galore and was continually getting out of shape—slipping down or working up and always needing attention. Then, there were salves and washes and ointments to make the case worse and harder to bear. I want to say that you will find none of these annoyances and vexations in the BROOKS APPLIANCE. At least they are reduced to a minimum. This APPLIANCE was made with a view to eliminate, to do away with, just such trouble. I would have been foolish to work half a lifetime thinking out and perfecting a thing that had no advantage or was not better than scores of other inventions upon the market. In my APPLIANCE you will find the old objectionable features LEFT OUT. You will find it easy to wear. You will scarcely realize you are wearing it. There is no binding, drawing and slipping out of place. It does its work effectively and with comfort to the wearer. I want you to read my book, in which I have taken pains to give full particulars about it. Then, there are a few letters printed in it—selected at random from among hundreds written by men and women who have been cured. You can write these folks and see what they say. If I were you I would see to this matter without waiting. You can put off some things without running much risk, but a rupture is a dangerous proposition to neglect. A rupture is not only bad and serious itself, but it leads to things infinitely worse. Fill out coupon and mail TODAY. Tomorrow will do, but today is better.

Don't Make The Child Wear A Truss Through Life

I Want to Reach the Parents of Every Ruptured Child in the Country. The Truss is a Flesh Torturing Invention Fit Only As a Relic of Barbarity

I want them to know about the Automatic Air Cushion Rupture Appliance that I make for children who are afflicted in this way.

The Brooks Appliance Cured His Rupture. Now He Is As Sound And Whole As If He Had Never Been Ruptured.

My appliance can be put on any child with perfect safety to the little one. For growing children there is nothing better to be had—no matter how much you pay—than my Appliance. I want the parents or others who may have children in their care to understand that there should be no delay in getting proper help for ruptured children.

Every day that the rupture is allowed to go on without the right means of correcting it— just so much harder will it be for the child to get rid of it.

No ruptured child can ever be free from the thought of the rupture and it is not fair to any child not to have an equal chance with other children.

The above is C. E. Brooks, of Marshall, Mich., the Inventor who has been curing rupture for over 30 years. If ruptured write him today.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will send you free my illustrated book on rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you may also read. Fill out free coupon below and mail today. It's well worth your time whether you try my appliance or not.

No matter what we may wish to think —ruptured children do not have an equal chance.

Common trusses do not help.

Thousands of men and women know that from their own experience with such trusses.

But it is not necessary for children to wear harsh, cumbersome steel trusses any more.

You may have had to wear something like this but don't make your child do it. Give the child something better.

My Appliance is better and I want to prove it to you.

I will make an Appliance to the child's measure, send it on TRIAL—put it into your hands to see and use and then you can say whether it is what I claim or not.

The Automatic Air Cushion conforms with every movement of the child; there is an even, gentle pressure which gradually binds the broken parts together—as you would bind a broken limb—and then no matter how much the child jumps, runs, rolls over or falls down—the pressure is kept up just the same—always drawing the parts together.

Write me today and get all the information—send the coupon.

Others Failed But The Appliance Cured

C. E. Brooks,
Marshall, Mich.

Dear Sir:—Your Appliance did all you claim for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him in 3 months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you. Yours respectfully,
W. M. PATTERSON.

No. 717 S. Main St., Akron, O.

Pennsylvania Man Thankful

Mr. C. E. Brooks,
Marshall, Mich.

Dear Sir:—Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug, and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of the body and seemed to be a part of the body, as it clung to the spot, no matter what position I was in.

It would be a veritable God-send to the unfortunates who suffer from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My rupture is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers. I am, Yours very sincerely,
JAMES A. BRITTON.

80 Spring St., Bethlehem, Pa.

Remember

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon below and mail today.

Ten Reasons Why

You Should Send for Books' Rupture Appliance

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture cannot be thrown out of position.
3. Being an air cushion of soft rubber it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable, and positively cannot be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing a harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the material of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending free coupon today.

Cured at the Age of 76

Mr. C. E. Brooks, Marshall, Mich.

Dear Sir:—I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable. Very sincerely yours,
SAM A. HOOVER.

High Point, N. C.

Child Cured in Four Months

C. E. Brooks.

Dear Sir:—The baby's rupture is altogether cured, thanks to your appliance and we are so thankful to you. If we could only have known of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks. Yours very truly,
ANDREW EGGENBERGER.

Confederate Veteran Cured

Commerce, Ga., R. F. D. No. 11.

Mr. C. E. Brooks.

Dear Sir:—I am glad to tell you that I am now sound and well and can plough or do any heavy work. I can say your Appliance has effected a permanent cure. Before getting your Appliance I was in a terrible condition and had given up all hope of ever being any better. If it hadn't been for your Appliance I would never have been cured. I am sixty-eight years old and served three years in Eckle's Artillery, Oglethorpe Co. I hope God will reward you for the good you are doing for suffering humanity. Yours sincerely,
H. D. BANKS.

I'll Feed Your Stock 60 Days Before You Pay

S. R. FEIL, Pres. Registered Pharmacist and Graduate of the National Institute of Pharmacy

I'll Show You How

—To Make Them Grow Faster
—Thrive Better—Look Better
—Put on Flesh on No More Feed
—GET RID OF THE WORMS
—Save Your Stock Losses

I have done it for thousands of farmers and stockmen—I am doing it every day—I'll do it for you. All I ask is the privilege of sending you enough Sal-Vet to last **all** your stock sixty days. If it doesn't do what I claim I'll gladly cancel the charge.

The Great Worm Destroyer

TRADE MARK **SAL-VET** REG. U.S. PAT. OFF.

The Great Live Stock Conditioner

I simply want to show you what a remarkable change Sal-Vet will work on your sheep, your hogs, your horses and cattle. I want to show you how it will improve their condition—make them thrive better—look better—put on more flesh—and, above all, ***get rid of the worms and parasites,*** which are the biggest drain on your stock profits. After you see the wonderful results Sal-Vet produces you will be only too glad to pay its small cost and order more.

Remember, I don't ask a penny of pay in advance. I prove all my claims first.

S. R. Feil, Pres.
Registered Pharmacist and Graduate of the National Institute of Pharmacy.

Your Stock Will Doctor Themselves

No Drenching—No Dosing—No Mixing—No Trouble at All

Simply place the Sal-Vet I send you where all your farm animals can run to it freely and they will quickly rid themselves of stomach and free intestinal worms. I want you to see with your own eyes before you pay me one penny how Sal-Vet will save your sheep, how it will save your hogs, how it will protect your stock against deadly plagues, how it will make all your farm animals look better and put on more flesh with no more feed. I want you to see how it will do all these things for you by first getting rid of the blood-sucking, life-sapping, disease-breeding worms and then by putting your stock in the pink of condition before you pay me a cent. That's why I make you this unusual offer.

Send No Money

SIMPLY FILL OUT AND MAIL THE COUPON TODAY

Read the letters at the right from grateful farmers and stockmen who accepted my offer. See how Sal-Vet stopped their losses and increased their profits, how it rid their stock of the deadly worms—how it prevented losses when contagious diseases were all around them. It will do as much for you. All I ask is that you fill out the coupon—tell me how many head of stock you have, mail it to me and I will ship you enough Sal-Vet to last your stock 60 days. You simply pay the freight charges when it arrives and at the end of 60 days report results. If Sal-Vet does not do what I claim, I'll cancel the charge—you won't owe me one penny. Mail the coupon today.

SIDNEY R. FEIL, President
THE S. R. FEIL CO.
Dept. UPF 2-1-13 Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and will then pay for it if it does what you claim. If it does not, you are to cancel the charge.

THE S. R. FEIL CO., Dept. UPF Cleveland, O.

60-day trial shipments are based on 1 lb. of Sal-Vet for each hog and sheep and 4 lbs. for each horse and head of cattle, as near as we can come without breaking regular packages.

Proof That Proves From Actual Users

"Your Sal-Vet has done all that you claim, and perhaps more. Hog cholera has been all around me, and I have not had one sick hog. I cannot praise Sal-Vet too highly, and I do not hesitate to recommend it to all hog raisers."—(Signed) A. O. Kellogg, Troy Grove, Ill.

"I fed a carload of hogs on which I made a thorough test of Sal-Vet for seventy days. Cholera or some disease like it was killing off hogs all around me, but I never had a single one sick; they remained in fine condition during the entire time."—(Signed) W. C. Grove, Box 235, Hominy, Okla.

"I am greatly pleased with your Sal-Vet; my hogs are doing just fine, but my neighbors all around me, who have not used Sal-Vet, have had heavy losses."—(Signed) Jerry C. Smeltzer, Box 33, Canalou, Mo.

"All last winter I used Sal-Vet for 2,500 head of yearlings, and can not find words to say the good things about it that I would like. However, I believe Sal-Vet to be the best thing in the world to keep sheep in a healthy condition and in excellent appetite."—Svend Mauland, Big Timber, Mont.

"We have given the preparation (Sal-Vet) to our milch cows, and these also have shown great improvement since."—Geo. W. Smith & Son, Burnett, Wisconsin.

"Have been feeding Sal-Vet to some of my horses which were very thin and in a run-down condition. They have now picked up in flesh and spirits in spite of the heavy work incident to this time of the year."—Eli Furland, Artesian, S. D.

WARNING

Sal-Vet cannot be successfully imitated It is prepared according to a secret formula, under the personal direction of Mr. Sidney R. Feil, Registered Pharmacist and Graduate of the National Institute of Pharmacy. Mr. Feil has been engaged in Laboratory work for 25 years, and was formerly assistant to Dr. Nathan Rosewater, former chemist of the Ohio State Dairy and Food Commission. Mr. Feil has also installed special machinery, at an expense of thousands of dollars, enabling him to prepare Sal-Vet in such a way that it is always the same and absolutely unequaled in efficiency as a worm destroyer and conditioner. Beware of imitations. Look at the name carefully. Get the original, genuine SAL-VET.

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet Packages.

This Paper is Different from all Others. Every Farmer and Every Officer of a Farmers Association Should Subscribe. Blank Enclosed.

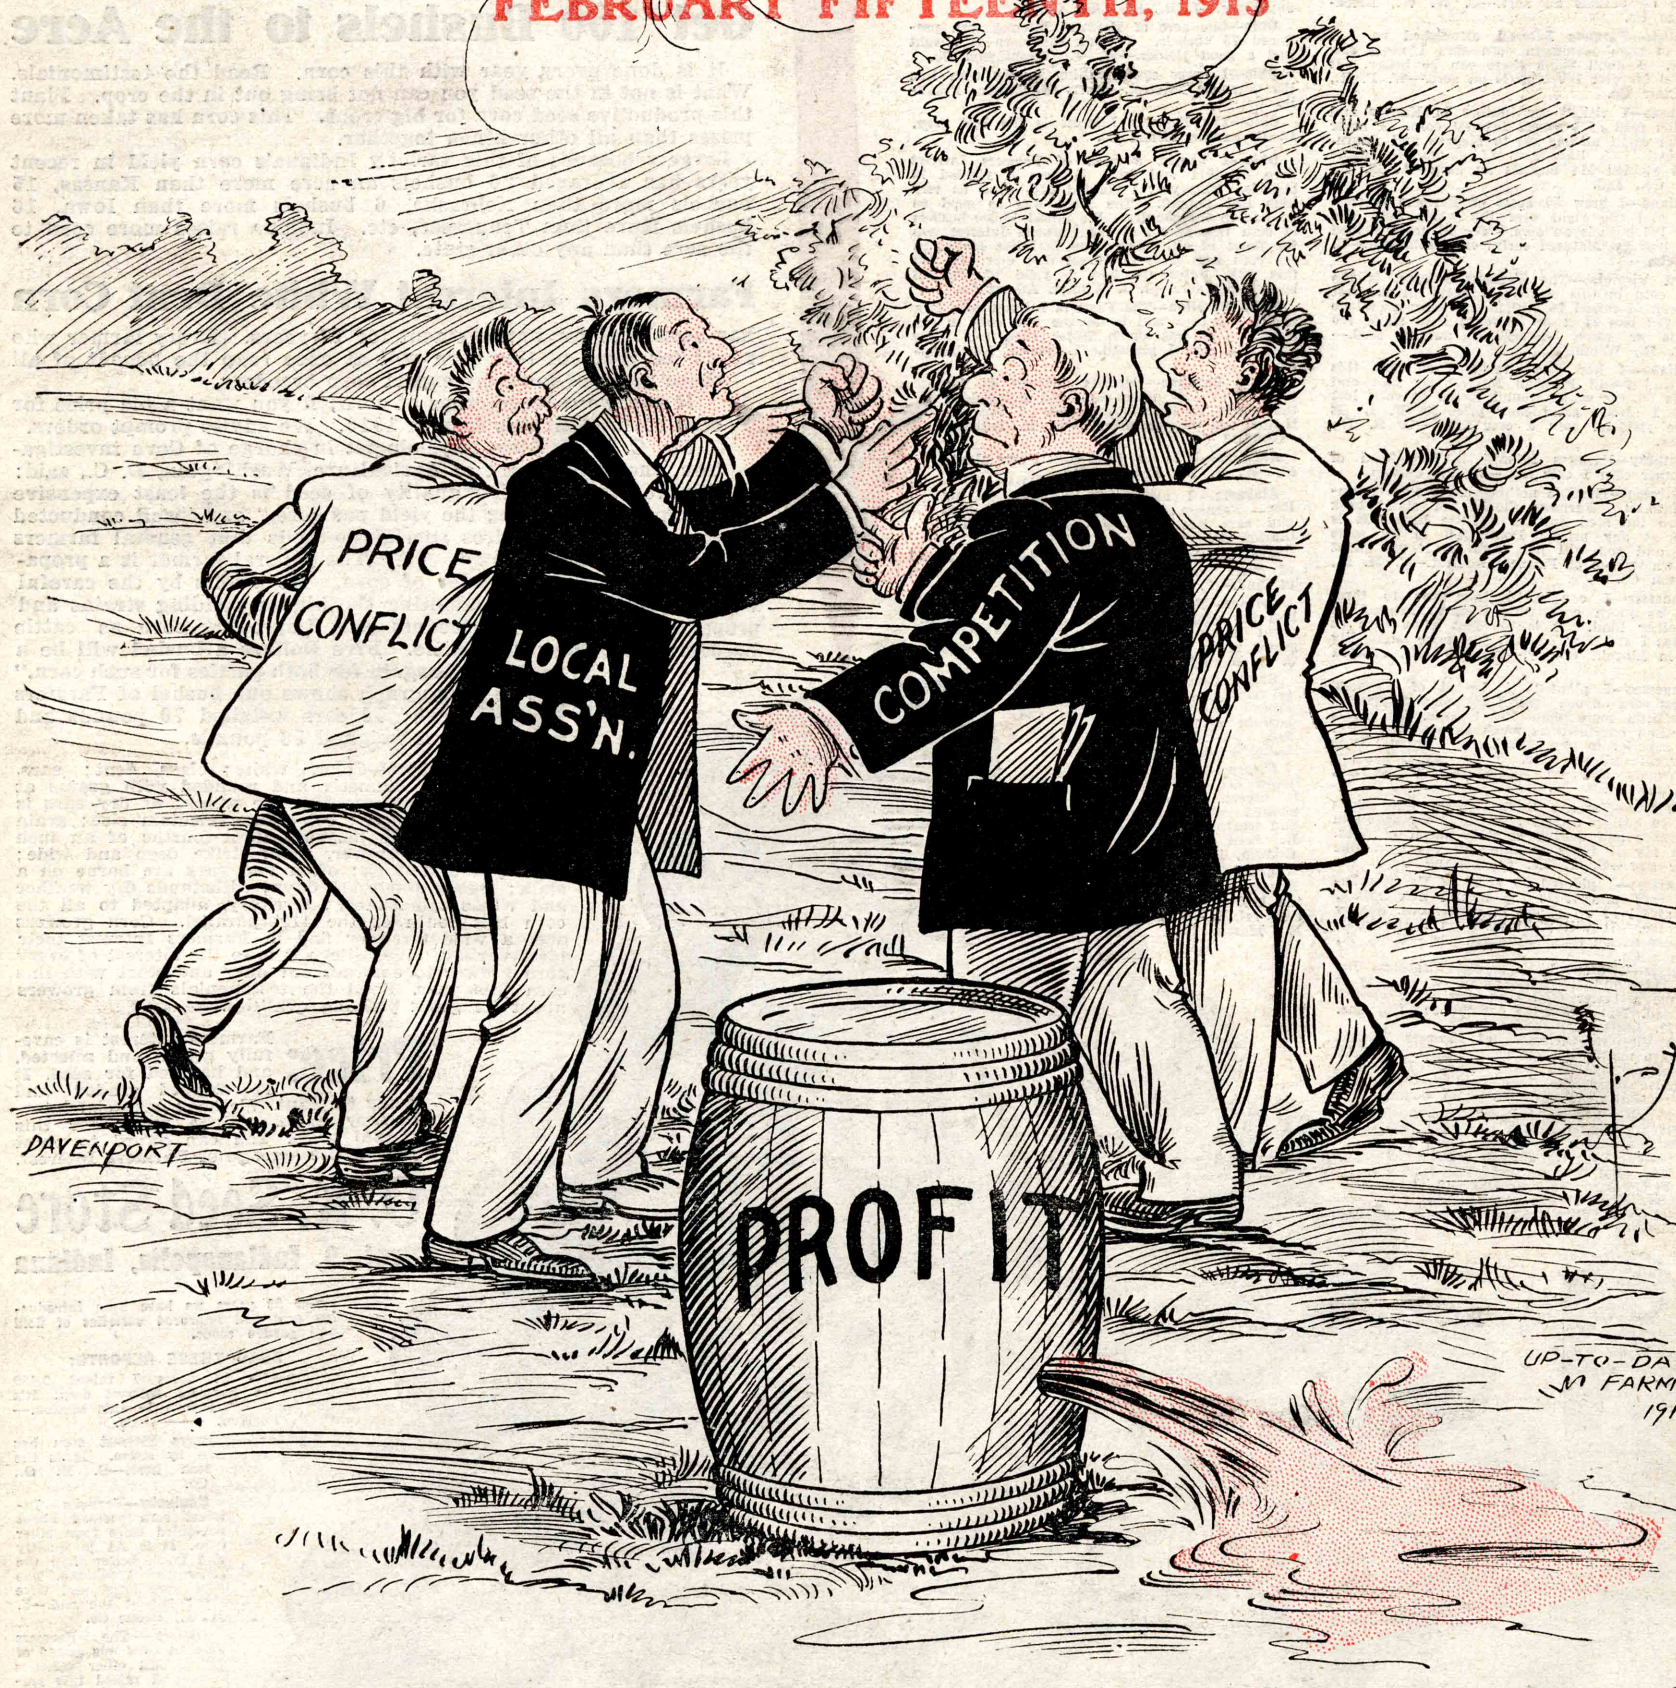
UP-TO-DATE FARMING

FEBRUARY FIFTEENTH, 1913



While the Local Associations and Individuals are Scrapping Over the Markets the Profit Wastes

EXAMPLE—"We have six organizations trying to help the farmers in a radius of twenty-five miles. All raise strawberries. Last season the averages were as follows for the different associations: $1.59, $1.26, 83c, $1.09 and $1.13. These prices in the same season, for the same goods and oftentimes sold to the same people. Any business man can look at the above figures and know there is something wrong. It seems to me that no association would want to sell in competition with its neighbors, but this is being done all the time. The thing is to bring the different associations in a federation and the different sections of the country in touch with each other."—J. W. W., Louisiana.

BETTER CORN

No Other Corn Has Such a Record---Read These Reports Selected from Many Received

NOTE: We do not give complete address as that would divert trade from our house. Every testimonial is guaranteed genuine and the original may be seen on file in our office.

Indiana—The Farmers Interest corn is yielding 100 to 120 bushels an acre all over my field. Nothing like it ever seen in all this section before.—L. C.

Kentucky—We thought we grew good corn, but your Farmers Interest is yielding 110 to 120 bushels an acre, beating our best native corn 25 to 30 bushels an acre.—C. W. W., Breckenridge Co.

Illinois—Farmers Interest astonished us. A field of such mammoth corn ears I never saw before. I don't think there can be better. It is good for over 100 bushels an acre.—W. P. R., St. Clair Co.

Kansas—I visited my brother in Kansas and saw his field of Farmers Interest corn. I never saw its equal all my way to Kansas and return. The ears look like arms of giants. He wrote me it yielded 114 bushels an acre.—A. M. T., Knox Co., Ind.

Indiana—I grew 50 acres of Farmers Interest corn, and the yield over the whole field was 90 to 105 bushels an acre. The 50 acres yielded 4,948 bushels. Matured early; ears mammoth.—C. A. Helm.

West Virginia.—The Farmers Interest is the finest corn in this county; it beats all the rest of them. I raised 75 bushels per acre; a cyclone destroyed lots of it or it would have made 100 bushels or more. Everybody wanted seed.—B. P. B., Woodland.

Indiana—I had three varieties of corn this year and found Farmers Interest my best and it was on my worst ground, being in corn last year. I always get highest price for F. I. It is the yieldiest corn I ever grew.—C. B. D., Orleans.

Kentucky—Farmers Interest is far ahead of any other corn I ever saw.—B. P., Chilton.

Oklahoma—There is nothing better than Farmers Interest. Farmers should not stand back because the seed cost is a little high. It is cheap at any price. Don't fail to try some of it and you will not regret it if you plant your whole crop of Farmers Interest.—C. M. B., Jefferson Co.

Tennessee—I can make from two to three times as much corn with Farmers Interest as any other kind. It is the best filled corn at the tips I ever saw. I won first prize on quality corn in Lincoln County.—Carlton McD, Lincoln Co.

Tennessee—I planted ¼ bushel of Farmers' Interest corn on one acre of ground and it yielded a little more than 100 bushels. It yields more than one-third as much as my other corn. It is superior to any corn I ever planted. It is nearly all uniform style. I can say it has but few equals and no superiors.—Carl Mallard, Humphrey Co.

Tennessee—Farmers Interest beats other kinds 30 to 40 bushels an acre. It is as far ahead in appearance and quality as it is ahead in yield. I can say it beats anything in the corn line I ever saw.—E. C. H., Cumberland Gap.

Tennessee—I planted 20 acres of Farmers Interest corn and it is the best I ever raised. It is ahead of all others in appearance, quality and value. It will yield more on fertile lands or in dry season than any other corn.—G. S. T., Davidson Co.

Virginia—I planted ½ acre of Farmers Interest corn and it yielded fine. I can say it gave me a better crop than any other corn I ever tried. The ears filled out the end just fine.—A. M. Lacey, Campbell Co.

West Virginia—One acre of Farmers Interest corn gave me 75 bushels yield. This was twice as much as my other corn yielded. I think it will prove to be the finest corn that was ever in the country.—G. W. H., Wise County.

What do all these farmers' reports mean to you? Do you get yields like they report? Do you want such big crops? Don't fail to send for our Corn Circular; it describes other high bred corn that we sell. You may prefer a yellow corn. This circular will give you full information. It will pay you big to plant your entire crop of Farmers Interest.

Missouri—I planted 6⅛ acres of Farmers Interest corn and the yield was about ½ better than another variety of white corn. It is ahead of all in quality and value.—J. M. G., Nodaway Co.

Missouri—I planted 4 acres of Farmers Interest corn which yielded about 1-3 more than any other.—I. R., St. Clair Co.

Ohio—One acre of Farmers Interest corn produced 75 bushels. I think this corn is alright and a good yielder.—W. V., Washington Co.

Ohio—I never saw anything in the corn line like Farmers Interest.—Harry A. Miller, Franklin Co.

Ohio—The Farmers Interest is the best corn. D. D. Landis, Miami Co.

Ohio—I bought a peck of Farmers Interest corn in 1911 and from ½ acre it yielded 70 bushels. This year I planted 22½ acres on very high hill ground. The yield was as good as we had in the country. We raised 15,000 bushels of corn this year and the Farmers Interest was the finest of all. Every one that has looked at the corn says it is the finest they ever saw. On this 22½ acres we had a yield of 80 2-3 bushels per acre.—J. I. Winner. Athens Co.

North Carolina—The Farmers Interest corn is a very pretty corn and is far the best corn in the country. It was much better than any other variety of corn I planted.—J. Brown, Northampton Co.

North Carolina—Farmers Interest is far superior to any other corn and out-yielded the others 15 bushels an acre. I consider it the best I ever raised.—W. R. Jenkins, —Guilford Co.

Alabama—It is the finest corn I ever planted.—W. O. H., Franklin Co.

Alabama.—I never saw the like in my life. Farmers Interest grew 12 feet high and ears like a churn.—W. L. McGahey, Clarion Co.

Georgia—Farmers Interest is fully 1-3 ahead of other varieties I raised on the same kind of land.—C. W. Harvey, Catoosa Co.

Arizona—Farmers Interest corn more than doubles the other varieties that I planted. On account of it standing the hot sun better. I grows much better than the other varieties.—J. S. Russell, Gila Co.

South Carolina—Farmers Interest corn is far better than any other varieties and about 20 bushels more to the acre. It is a fine yielder.—W. F. Hodges, Colleton County, S. C.

Missouri—I consider Farmers Interest corn far superior to others. I am well pleased with my seed and treatment of the O. K. Seed Store.—C. I. Godwin, Polk Co.

Indiana—My Farmers Interest corn is the best corn I ever raised.—W. E., Martin Co.

FARMERS INTEREST is the Highest Bred Seed Corn in the World

If you want more corn and better corn you must look to the seed. A few dollars invested in Farmers Interest Corn will return the investment many fold in the resulting crop. Read in the other column what others have done.

Get 100 Bushels to the Acre

It is done every year with this corn. Read the testimonials. What is not in the seed you can not bring out in the crop. Plant this productive seed corn for big crops. This corn has taken more prizes than all other kinds together.

Largely because of this variety Indiana's corn yield in recent years has averaged 20 bushels an acre more than Kansas, 15 bushels more than Nebraska, 6 bushels more than Iowa, 16 bushels more than Tennessee, etc. Indiana raises more corn to the acre than any other state.

Farmers Interest White Dent Corn

has been bred for improvement for 17 years. Every farmer who sends for some of this corn will at once reap the benefit of all these years of labor by expert corn breeders.

If you want large crops of corn; if you want a big price for seed corn, plant this corn in 1913. We advise prompt orders.

Mr. C. P. Hartley, physiologist in charge of Corn investigation, the Department of Agriculture, Washington, D. C., said: "Improvement of the quality of seed is the **least expensive** method of increasing the yield per acre," and "well conducted corn breeding requires **special** methods that general farmers have not time to apply. * * * The general farmer is a propagator rather than a breeder of corn. He **profits** by the careful work of the breeder by **adopting the higher yielding strains** and propagating them. Corn breeders are improving corn as cattle breeders have improved cattle. **Five Dollars a bushel will be a profitable bargain for both parties for such corn."**

The photograph shows one bushel of Farmers Interest Corn; 56 ears weighed 70 pounds and when shelled weighed 58 pounds.

DESCRIPTION—Color, white; class, dent; ears, large, uniform diameter and rounded with grains at both ends; about one-fifth the weight of dry ears is cob, four-fifths corn; cob white, medium size; grain deep, often grains measure three-fourths of an inch long; a strong grower, roots strike deep and wide; stalk tall and thick; often two ears are borne on a stalk; season about 110 days; withstands dry weather and winds remarkably; territory, adapted to all the corn belt south of the 41st parallel. Corn growers over a wide territory find in Farmers Interest their ideal variety. We believe it is to the interest of every corn grower to embrace our offer and start with this corn this year. Read the testimonials from growers about its great yielding qualities.

Price: Farmers Interest is carefully grown and selected, and handled for seed. It is shipped graded and ready to plant. We have a special introductory price. Write today for this special price. You can afford to plant your entire acreage of Farmers Interest.

O. K. Seed Store

Dept. 9, Indianapolis, Indiana

For 33 years we have been introducing new and improved varieties of field and garden seeds.

READ THESE REPORTS:

Iowa—On 28 acres I raised 2,430 bushels of Farmers Interest corn. It's the finest white corn in this section.—C. F. Pearson, ———, Co.

Maryland—Farmers Interest corn has taken our section by storm. It is the greatest ever seen here.—S. B. O., Prince George, Co.

Kentucky—Farmers Interest corn yielded about one-third more than other corn. It is A1 in quality and much better than the other corn I planted. The ears were large and were filled out at the end.—J. N. G., Boone Co.

Illinois—The Farmers Interest corn was ahead of all other varieties I raised this season.—G. A. L., Jasper Co.

Illinois—The Farmers Interest made about 10 bushels more than yellow corn we had to the acre. I will plant almost all my corn with Farmers Interest.—F. W. W., Mason, Co.

One Bushel of Farmers Interest Corn, 56 Ears, weight 70 pounds.

Money Control the Great Question

"The Money Question is the Biggest Most Important and Most Difficult One Before the Country"

THE truth is that the money question is the biggest, most important and most difficult question before the country today." That emphatic declaration is attributed to Hon. Champ Clark, speaker of the House of Representatives, and who so nearly won the Democratic presidential nomination at Baltimore last year. We fully coincide with that view. It is the biggest question because it involves everything else in the country—the manufactures, the mercantile concerns, the railroads and steamboats, the mines and farming. None of these can be operated without money, and whatever controls the money controls them also.

It is the most important question because money is the medium of exchange, and without money or something used as a substitute for it there can be no exchange of property except swapping or barter—no buying or selling—and labor could not be employed. Everything would come to a dead standstill.

It is the most difficult question because those who control the money do so for the profit there is in it, and since every enterprise, including labor, and every exchangeable commodity on earth depends upon money, those who control the money can make the profit whatever their greed prompts them to make it. No one voluntarily surrenders an advantage like that, and there is little doubt but those who now control the money would not hesitate at the destruction of the government itself rather than surrender that control. Though controlled by only a few persons at the head of great banking institutions the system ramifies the entire country, and its influence is felt at almost every voting place. Those in public office dare not antagonize that control, hence it is secure so far as effective legislation or the action of the higher courts is concerned. The politicians dare not support or even suggest a measure for its overthrow. When they can no longer ignore the question, they dodge behind the people, or pretend to do so, and excuse themselves by the plea that the people do not yet know just what it is best to do. Mr. Clark is no exception. We quote from him further:

> The whole country has but a hazy idea of what is needed. The evidence which has been accumulated during the hearings before the Pujo and Glass committees is of such tremendous importance and covers such a vast field that the public has not been able to fully grasp the meaning as yet.

It is not for the public, the people, to do these things, but for their chosen representatives. Men like Mr. Clark were sent to Congress because of their supposed superior wisdom, and it is up to them to "grasp the meaning" of these great questions, and to find and apply an answer to them in the interest of the whole people. The discovery that a question is big, important and difficult, is of no benefit to the people. What is required is an equitable solution, and to that the authorities should promptly address themselves.

The question of money control is not a new one. Laws enacted years ago made it easy of accomplishment. Those who sought that control were the authors of those laws, and that class has been the authors of most of the monetary laws since then. They are not yet satisfied, and will not be until their power is as absolute as that of kings, and the government becomes a mere tool in their hands. The so-called Aldrich bill is a long step in that direction.

Evidence before the committees mentioned by Mr. Clark shows that even now one man and his subordinate associates not only control but claim more than twenty-five billion dollars of the country's wealth. That is an uncountable sum, and it is not all money for there is not that much money in the country—scarcely that much in the world. The whole world's production of gold last year was only $465,000,000, which is less than half of one billion. If they had in their vaults every dollar of gold that was ever coined in the United States they would not have half so much as was proven they owned and controlled of the nation's wealth. Hence it is not the gold alone. It is the manufacturing establishments, the mines, the railroads, the steamboats and steamship lines, and the great business concerns. But it is not the farms, because up to now the lands have been practically out of their reach. But the mortgage-bond scheme now before the Congress in the damnably false name of aiding the farmers is designed to bring the farms and homes of the people within the reach of that control, as the commercial and industrial institutions now are.

Suppose these few men with their twenty-five billion dollars wealth control, and a few others representing like power, should decide there is enough manufactured goods and machinery in this country. Every furnace would go out and every wheel stop. Suppose they should decide the railroads should cease to be operated; every locomotive would go dead on the track. Suppose they should decide that no more coal, or iron, or other mineral wealth should be taken from the earth; every mine whistle would cease to blow and suffering for lack of fuel would follow.

That is really the situation and those are the possibilities that confront the people. It is time for statesmen, or men who have been trusted as statesmen, to see the bigness, the importance, and the difficulty of the question. It is the inevitable result of the individual and corporate control of the wealth of the country, not the money only, but whatever is used as money—individual and corporate credit converted into money, or, rather, a substitute for money. This is the trap in which the people have been caught. Whenever the government surrendered its right, the only power on earth that has that right under the constitution, to coin or issue the money, it paved the way for the conditions that we have but feebly outlined, the great question that Mr. Clark says is before the country today.

Are our recognized statesmen equal to the emergency? It is doubtful while so many of them are subservient to the powers that thus control. Once more we instinctively turn to the farmers. They are amenable, of course, to financial conditions, but their lands and homes, as yet, are free, and their rich soil, dependent only on Nature and skillful culture, guarantees to them a living. The constitution of the country makes its citizens its rulers, and a large proportion of those citizens are indipendent farmers. If these were situated so as to act intelligently and together the powers of evil could be overthrown and liberty rescued from its greatest peril.

Up-to-Date Farming is Right

THE articles that have appeared in UP-TO-DATE FARMING expressing our opinion and giving the big institutions that are planning such great work for what they call agricultural extension, including the Lever bill before Congress, have met with general approval, but some have thought we take too narrow a view of the work of these great concerns. Every development convinces us more and more that we are right. The so-called "expert" teaching of better farming is a farce, and the idea of directing every effort to the production of more stuff without a market demand for it is absurd.

Illinois, at least, emphatically sustains us in that position. The Illinois Farmers' Institute, one of the most active and progressive agricultural institutes in the Union, recently adopted the following explicit preambles and resolution. These truly up-to-date farmers could scarcely use stronger language:

> Whereas, From time immemorial man has exerted himself, in every country and in every climate, practicing every method known to the art of agriculture, to extract large yields from the land—deep and shallow plowing; subsoiling; various methods of seeding; of planting; various amounts of seed; rotation of crops; the selection and improvement of the seed, the adaption of crops to soil, etc.—yet production has not been maintained, nor the fertility of the soil preserved; and with these facts before us and with history pointing to land ruin wherever civilized man has farmed without the aid of science, and wih organizations being formed throughout the country for the purpose of promoting better farming through the employment of expert farm instructors and demonstrators; and bankers, merchants, manufacturers, railroad corporations, county boards of supervisors and farmers are called upon to contribute funds liberally for defraying the expenses of these organizations, and,
>
> Whereas, The Illinois Farmers' Institute is often called upon to define its position with reference to this work, and inasmuch as the Illinois Agricultural Experimental Station and progressive farmers of this state have developed a system of farming known as the "Illinois System of Agriculture," the practice of which results in production with permanency; therefore, be it
>
> Resolved, That the Board of Directors of the Illinois Farmers' Institute does not approve any plans of any organization looking to increased production of farm crops which does not contemplate the practice of the "Illinois System," and this board earnestly urges all farmers to refrain from contributing to any fund to be used in paying the salary and expenses of any so-called "field demonstrator," "farm instructor," "crop expert," or "county agent," who does not thoroughly understand the "Illinois System of Agriculture,' 'and who is not in hearty sympathy with its principles and willing and anxious to teach them.

Bureau of Marketing

AS WE have shown in other issues of UP-TO-DATE FARMING, our long years of hard work against such odds as few men have ever encountered, are certainly to bear fruit. When we first began to argue the question of marketing as one of importance to farmers and urged other people to take it up and at least combine it with their efforts for increased production, our position was assailed from almost every quarter. But not for a moment did we relax our efforts, and now the marketing side of farming is being discussed everywhere. At the time when we are writing this article a bill has passed in the United States Senate to create a division of markets in the Department of Agriculture, and has been reported upon favorably in the House. Before this paper reaches our subscribers it may have passed the House and become a law.

Hon. Thomas L. Rubey, of Missouri, speaking of the measure and urging it before the House, declared that every year $1,500,000,000 worth of farm products go to waste, not because there is no need for them, but because under the present system they fail to find a market. The stopping of this waste, Mr. Rubey says, would do much to solve the problem of the high cost of living. It would surely bring increased profits to the farmers, and yet furnish more complete supplies to consumers, and even at lower prices. Our readers know that we have persistently argued this very point for months and years. The local market, continues Mr. Rubey, may be glutted with the products farmers may have to sell, while at another market within easy reach there may be a strong demand for that very stuff. He refers to the fact that several times in the past, potatoes have sold as low as 20 cents a bushel in the local market, while the very same quality of potatoes were bringing $2 a bushel not far away, and at points that could be easily reached from the home shipping point. There was during the past marketing season similar conditions with onions in Texas, California and Indiana, and with cabbage in the vicinity of Pittsburg, Pa., and also with apples in Southern Illinois and elsewhere. It is so every year with various crops.

One duty of a division of markets said Mr. Rubey, would be to keep farmers all over the county advised as to market conditions anywhere within reach of them. Where there was a glut in one place and a scarcity in another, farmers would be advised of the fact and could ship accordingly. It is Mr. Rubey's opinion that if these market losses could be saved, farmers in general would receive more for their products than they do now and at the same time consumers would pay less than they do at present.

Heretofore, continued Mr. Rubey, just as we have said so many times, the Department of Agriculture has devoted too much time to teaching farmers how to produce larger crops, and has given too little attention, no attention at all he might have said, to the subject of marketing them.

Of course, all this is very gratifying to us, as it is directly in the line of our work for so many years; but laws enacted by the Congress and the States are so often deceptive and inefficient in their operation, that we must not be too hopeful. We are in favor of the measure and will do all in our power to help to make it effective, but we see nothing in it to cause us to relax our efforts. The farmers must be educated up to so great a change in the marketing side of their stuff, and consumers must be taught how to better obtain supplies. Hence this bill, should it become a law, makes no less work for UP-TO-DATE FARMING. On the contrary, it makes it all the more important that both producers and consumers should read it. We will be among the first to get the information thus given out by the Department, and it will be our unyielding purpose to give that information to our readers with such special instruction as will enable them all the more effectively to avail themselves of it.

And the adoption of such a measure will not make it any less necessary for the farmers to organize. In fact, it increases that necessity. Farmers must be in position to act together. They must be so united that they may jointly study the plans of the Department, and may more certainly note any defects therein. They must be united so as to avail themselves of the opportunities offered and advantages given. Individual farmers cannot do that, and unless the farmers can act together they must still depend upon the buyers and thus give to others the very advantages the government intended for them. Once more we appeal to farmers to take prompt action for their own benefit. If the government tosses you a plum get in position to catch it.

The Glutted Market Situation

EVERY crop produced by farmers represents a part of his business, and if his business is profitable it should bring in a part of his income. This is as true of potatoes as it is of wheat, or corn, or cotton. Glutted markets for any of these crops show an overproduction or a bad distribution, either of which is disastrous to the producers, and any marketing system that will solve the problem both producers and consumers are up against must see to it that stuff is not shipped in greater abundance than it can be moved and that market gluts must be prevented. We clip the following from a leading market publication of a few weeks ago:

The matter of moving potatoes is causing an unsatisfactory condition at loading points, inasmuch as the various operators who own warehouses in the north have their houses well filled and the fact that they can move but few cars results in their being unable to accept more spuds from farmers. It is understood that most warehouses are crowded to the limit, and that the car deal is responsible for the fact that a good portion of the crop is still in farmers' hands because of their inability to dispose of the crop to operators.

Under conditions like those it is the height of folly to urge the production of more potatoes. There are already so many that the cars cannot move them and the storage houses are so full they can take no more. The result is that the surplus must go to waste in the hands of the farmers. It may be claimed that these conditions are only local in their character, and that, while there was this surplus in the northwest, tributary to Chicago, there may have been a scarcity in the broader portions of the United States. We grant that possibility, but had these potatoes all been moved as offered, the central markets would have been glutted, prices depressed, and like losses would have followed lack of demand in the central points of consumption, we care not how hungry people may have been in other places not reached by the supply. We, therefore, declare this truth to be self-evident, that any marketing system to be effective for good, whether that system be promoted by railroad corporations, agricultural schools, or by the government itself, must enable farmers to hold surplus crops to the capacity of the railroads to move them, and it must find and supply general and local demands instead of piling the surplus up in over-supplied centers, from which it must be shipped at extra cost, or dumped into the waste heap.

This is true of every crop that is produced for consumption in the United States or elsewhere. The demand must be found and supplied as nearly as possible from the fields, and farmers must be taught how to hold their stuff, when to sell and where to ship. In fact, the system may easily make the demand a seeker for the supply. This, in ordinary parlance, will enable the two to meet each other, and when they do that the problem is easily solved.

Do American Farmers Raise Enough

FIGURES sometimes come from Washington that ought to surprise those who are constantly urging farmers to produce more and more of the products of the soil, and also those magazine writers who are so dolefully predicting a time when there will be a battle for food in this country. Last year, 1912, there was exported from this country no less than $150,000,000 worth of foodstuffs. This was $27,000,000 more than was exported the year before. If there is danger of a famine here, or a battle for food, why is all this stuff allowed to be sent out of the country? It is all bosh. Our farmers raise enough and to spare. People who know nothing but one side of a question should hesitate before going to the public as teachers of that subject. Of the foodstuffs thus exported last year, there were 60,000,000 bushels of wheat, 30,000,000 bushels of corn, 32,626 head of cattle, 9,000,000 pounds of fresh beef, and large quantities of other meats. Much of this stuff that went out of the country was actually needed here and would have found a ready market at fair prices if the demand could have found the supply. This calls loudly for a better system of marketing and distribution.

Among other farm products that were sent out of the country we may mention $623,000,000 worth of cotton, and $123,000,000 worth of meat and dairy products.

Our theory is to first supply the needs of home by finding every point of demand, and if there is a surplus after that send it abroad. Under the present system the products are hurried into the oversupplied centers whence much of it is sent by the speculators to other countries because they thus get greater profits, not caring whether any are left hungry in this country or not. Then the writers and speakers learn of the unsupplied places and raise their cry of more production or starvation. But right ideas are coming to the front in this country, and even the politicians should take notice.

THE PLAN

that will bring producers and consumers closer together in marketing deserves the support of every reader of this paper.

Why They Were Better

She—Don't you think these doughnuts are much better than those I made last week?

He—Yes, dear, the holes are so much bigger.

Mr. Dooley and the Inauguration

"Good mahrnin', Hinnissey!"

"Good mahrnin', Mister Dooley. I suppose ye're brooshin' oop yer ould kitaway coat to go down to Washington and attind th' inawgurashun sirrymonies iv Woodrow Wilson."

"Hinnissey, that has bin th' drame iv me iggistince, to shtand with me two troosty fate along Pinnsylvanya Avnee an' watch th' ould prissydint out an th' new prissydint in. It would be a grate wake that. But Hinnissey, me banker says that it would not be judishus to me pocket book to take a trip loike that. Why, jist to tip th' porters on the Pullman alone would take twinty-foive er thirty sints. Thin whin I got to th' cappytal I'd more'n loikely have to pay fifty sints f'r bed and brikfist, while whin I'm roight here to home I can lay to bed an' save a male."

"Yis, Mister Dooley, but if ye wint down there ye'd have a chanct to see Congriss in ackshun. 'Twould be a foine opporchunity to see th' pathriotic sinnytors at worrk turnin' out th' laws iv this broad land."

"Roight ye are, Hinnissey, an' they would be puttin' into practice what I've been advocatin' f'r many a day—co-operashun. It's impossible f'r th' house an' th' sinnate to git along alone unliss they git together. All bills f'r rivinyoo, f'r instance, must orriggynate in th' house. But th' sinnytors must put on th' finishin' touches. They can't git anywhere unliss they git togither. Do ye see, Hinnisseey? It's jist loike hitchin' oop a mule an' a long-horned steer. They're as different as can be, but if th' charryut iv shtate is goin' to make any progriss they'll have to pull togither.

"Now, Hinnisey, that takes me raight back to me favorite theory. I believe that th' projucer an' th' consumer should pull togither. As things is now, they won't avin shtand still long enough to git harnissed. Th' projucer is tryin 'to git within gunshot of th' consumer but he can't do it f'r th' shtore buildin's an' th' big warehouses that's always in th' way. I belave th' toime is comin' whin th' projucer on th' wistern plains will take wan iv his big lassoos an' hurl it through th' air an let it drap softly down around th' neck iv th' consumer an' thin he will say to him, 'See here, me friend, ye've bin roonin' away fr'm me f'r many a day whin I'm th' fellow that's a-feedin' ye. Here's th' very hond, mon, that raises yer cahrn an' yer cabbiges an' yer toornips an' yer coontry butter. Will ye take that hond an' saymint our friendshin in a glass iv hard cider?' That's what will happen wan iv these days, Hinnisseey. It's comin' jist as sure as me maiden name's Dooley."

Editorial Paragraphs

Reading Farmers—Are there any farmers who do not read? Our intimate acquaintance with rural life compels us to admit that there are. Children are growing up in homes where no papers come, and where books are few and unimportant. This is the most discouraging feature of our long and hard work to bring farmers to the front and secure for them opportunities equal to those enjoyed by other classes. If we could talk to these farmers personally the situation would be different, but the only way we have of communicating with them is the printed page. As we have said before, we can't make the paper talk; it has to be read, and to be read effectively it must go into the home. We have to depend upon our friends to help us get it there.

Partyism—Politicians want office either for themselves or friends through whom they hope to benefit in some way. This class of people seek popularity, and hedge around questions they fear would lose them votes. That is why so many great questions are passed lightly in the halls of legislation and others are supported that are clearly not for the best when the whole people are considered, but that are desired by strong influences antagonistic to the masses. The remedy for this is intelligent independence on the part of the voters. After all, the voters are the power behind the throne, and if that power would refuse to wear party shackles the politicians would take notice. The election last fall affords a splendid example.

Over in Illinois—It is very seldom that Illinois goes Democratic, but it did last fall, and following events prove that the state, in spite of the manifest independence of the voters, is cursed with a set of selfish, scheming politicians. The inauguration of the new governor and the setting up of the new state government was delayed by a disgusting factional fight over the speakership of the lower house of the state legislature. Even at the time we are writing the matter is still unsettled, and the defeated state officers are still in power. The voters of all parties should take cognizance of these disgraceful proceedings and teach their public servants better things.

Milk and Butter.—The milk and butter situation has been elicting a good deal of attention lately. In this as in every other article of production and supply the buying and selling bosses control the price at both ends, making the buying price so low that the producer has no profits and the selling price so high that the consumer can not afford to supply himself, thus reducing the consumption but making big profits for the fellow between. There is an abandonment of dairying in many quarters, it is said because the milking of cows no longer pays the farmer a fair profit. This condition wrongs the consumer as well as the producer, and it looks like the people of the United States ought to be able to knock out such an evil system.

In One Week—The Drovers Journal tells us of a recent case in Chicago when "those who were fortunate enough to sell their steers took anywhere from $8 to $14 per head less for them than such were worth one week previous." A market that is liable to so great a change as that in one week's time is not a safe market, and a business that is subject to so much doubt and uncertainty is not a safe business. Those who have been in charge of the national government are responsible for having allowed such conditions to come. If a government cannot protect its people from such gigantic wrong what use is it anyway?

Too Much Difference—When the farmer keeps cows on high priced land and feeds them high-priced feed, gets only 3½ cents a quart for milk that sells to the consumer in a nearby city for eight cents a quart, the difference is too great. All the profit is in the four and one-half cents margin and the handler gets it all. We shall lose faith in the intelligence of the American people if these things continue.

Parcels Post—If ever a law went into effect with a flourish of trumpets, the so-called parcels post did, and if ever a needlessly complicated enactment passed a deliberative body of sensible men the parcels post holds the record. Every post office has its "zones," and each must have an incomprehensible map as a guide to the postmaster in fixing rates. Each map is accompanied by a book of instructions that not one in twenty can understand. If the rates could not be made by weight for the whole country like letter postage is, why not fix the rate by the distance? An ordinary map with a scale of miles would enable any postmaster to determine the rate to any point without any of the zone mystification, and without the expense of making special maps for every post-office. The parcels post will soon be in as much disrepute as the postal savings bank now is.

Congressional Seed—"If congressional seed would grow wise and honest congressmen we would certainly say give the country more of it; but the fact is it will scarcely grow 'garden sass.'" Our readers know what we mean. Dignified congressmen will soon begin to send out packages of seeds to their constituents. It is wonderful that such a farce should continue so long. There is nothing extraordinary about those seeds except their customary worthlessness. They are usually seeds that the farmers care nothing for, and if they did they could procure just such but of better quality for a nickel a package, yet more than six million dollars of the public money have been thus foolishly squandered! It is of little or no benefit to anyone, and it is certainly undignified for the congressmen to engage in such a farcical distribution. Secretaries of Agriculture have opposed it and shown up its folly, as have many of the leading farm papers of the country. Yet Congress sticks to it and persists in making the annual appropriation for that purpose.

Less Than a Dozen—Congressman Lindbergh recently declared in an address in the House that "Less than a dozen men have been able directly and indirectly, to secure control of over 85 per cent. of the railroads; over 90 per cent. of the express and Pullman companies; over 65 per cent. of the telephones; over 60 per cent of the copper; over 65 per cent. of the petroleum, and over 87 per cent. of the steel." These are all public necessities, and it is impossible for the people to be "free and equal" under such conditions. There must be a change or our nation will go as other nations of history have gone.

Our Advertisers—We do not ask our readers to buy what they do not need, but often articles may be found in our advertising columns that people would like to have, and that they really need, but that they can not obtain from their local stores. That is one advantage there is in advertisements, and we are very careful to admit none but those who are reliable. We are sure our readers will be well treated by our advertisers.

Thinking of You—Every time we write a line for this paper we are thinking of every subscriber to UP-TO-DATE FARMING, and we are wondering, will each subscriber read this and will it be a benefit to the reader? That is the only purpose we have in writing, and we are careful to write only the truth, and to favor those things that are good and oppose the things that are bad. Somebody must do that and do it fearlessly if the people be properly informed, and that is what we try earnestly to do.

Made Money Every Year

I have been a subscriber to Up-to-Date Farming for about twelve years. I have made more money each year from reading it and taking its advice. It is a pleasure for me to introduce the paper to other farmers which I am doing. I agree with your stand against the Lever bill. I read the editorial on this bill with delight. I am never afraid to follow Up-to-Date Farming's lead because it is always right on every proposition. Every farmer should stand by this paper, which has done more to help farmers than any other paper in the world. When your subscription expires renew it at once. If your paper is in arrears when you read this stop right here and put 50 cents in a letter and mail it at once, or a $1 bill for three years.

I was not requested to write this. It expresses my convictions and I will say more: If ever this paper should cease to be published because it was not supported it will be the greatest calamity that can befall agriculture. I would like to hear from other subscribers. I have sent 133 subscribers to Up-to-Date Farming. How many others have sent this many? How many will you send to OUR paper this year?—A. H. Green, Arab, Ill.

On a Rough Sea

Sappy—I feel that I am surrounded by thought waves from my own brain.
Snappy—That's what's the matter with you; you are sea sick.

Had a Sour Mouth

Bess—She never said a sweet thing in her life.
Belle—No. she literally devours pickles.

What Was Wanted

She—John, dear, what about those new curtains?
He—Hang the new curtains!
She—I've been trying to, John, and that is what I want you to help me do.

A Cranky Business

"Did you ever notice how they wind up their autos in front? Every machine must carry a crank."
"The way some of them do one would think they don't carry anything but cranks.

Had Permanent Residence

They strolled into the museum. "Here are the mummies," said she. "Just to think! They have not moved for 5,000 years! He—"Gee, but aint they lucky? We have to move every spring.

No Room for Any More

Wife (who is very stout)—John, I'm afraid my new dress is not full enough.
Husband—I don't know how you could get any more in it.

Smile Awhile

But When

"Papa, every night Harry calls he tells me I am getting prettier."
"Does he tell you that before or after he lowers the lights?"

As One Says It

She—The man that sat next me at dinner today didn't have the manners of a pig.
He—I can't agree with you there, my dear, for I thought he certainly had the manners of a pig.

Had No Other Way

Askit—Do you manage to live within your income?
Spendit—I certainly do. How could I live without it?

Rule to Work Both Ways

"George, if you don't behave better I'll send you to bed fifteen minutes before your time."
"Then when I behave real good, why don't you let me stay up fifteen minutes later than my time?"

Apologetic

Mother—Frankie, you ought to apologize to the lady for stepping on her foot.
Frankie—Please excuse me, Mrs. Latham, I am very sorry your foot was in my way.

Expected to Have to Wait

Little Ikey, who had been visiting the orphans' home—Yes, I'd like to live at the orphans' home, but my folks are so big and stout I expect it will be a long time before I'm an orphan.

He Knew It

She—Do you know doughnuts are an ancient Grecian article of food?
He—Of course I did. They have been fried in grease ever since I can remember.

A Commendable Run

Preacher—What are you running for, sonny?
Boy—I'm running to keep two persons from fighting.
Pdeacher—That's good, my boy. Who are they?
Boy—Bill Perkins and me.

Pious Is as Pious Does

Jane—Mama, the new neighbors would like to borrow our lawn mower to mow their yard.
Mama—What! Today! This is Sunday. Run the mower behind the shed, and tell them we haven't any. I can't afford to let them break the Sabbath.

A Shorter Course

"Can't my boy take a shorter course in your school than the one in your catalog?"
"Oh, yes, it depends on what he wants to make. It takes nature a hundred years to make a full grown tree, but it can make a pumpkin in six months."

Decidedly Preferable

Why is it better to have paper money than gold? When you put it in your pocketbook you double it, and when you take it out you find it in creases.

Only Once

Homeseeker—People don't die very often over here, do they?
Native—No, sir, they never die but once.

Coming Out Right

Barber—Your hair is coming out at the top, sir."
Puz—Good. I knew it was in me, and I was afraid it might come out my mouth.

Very True

The Man—Society is a funny thing.
The Maid—How so?
The Man—A girl is not "in it" until she has "come out."

Crop Prospects *and* Market Reports

Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

A MILD winter over most of the country with abundance of moisture has caused winter wheat and grass in the Northern states to be in excellent condition. If no extremely cold weather with bare ground follows the crops will have a good start in the spring. Winter wheat was a short crop last year. It is not usual for two short crops of anything to come in succession. By this token we are in for a good crop in 1913. The mild weather has also helped southern producers and they are putting abundant crops of early vegetables, potatoes and fruit on the northern markets about two weeks earlier than usual. But unseasonable weather, whether it is cold or warm is dangerous. Frosts may kill premature development. The peach crop of the southern belt must run such a risk. Reports tell us that the peach trees of Georgia were advanced, on February 1, to about their normal state of March 1. Some orchardists shipped ice in and packed it about the trees to retard development.

For once we can record a decrease in the visible supply of wheat from two weeks before. But we regret that it is now higher than at corresponding date last year and two years ago, also it is the highest it has been in ten years. It is very evident that there is no surplus wheat outside of Kansas, Nebraska, South Dakota, North Dakota and Minnesota because the crop was short in the other states. Therefore the future, until the new crop comes, rests with the five states and the owners of the visible supply. It is estimated that the country is nearly on a domestic basis now, having exported heavily. In view of this the five states' farmers and the speculators who hold 72,000,000 bushels ought to get together on the price.

The corn visible increased very little considering the enormous crop, and the same can be said of oats. These crops are more fortunate, because they are largely fed on the farms, but wheat can only be sold to make flour.

The price of wheat is about the same as two weeks before, corn and oats are each a couple cents higher. The reader should note the great spread in prices between cash and future wheat, also between winter and spring wheat. Oats and corn are being exported freely, on account of our low prices. The consumption of oats is also enormously increased over last year as is shown by primary receipts of this crop, 129,000,000 against 70,000,000 bushels in the same period a year before and only 13,000,000 bushels in the visible supply.

The government estimated the quantity of potatoes remaining in the hands of growers on January 1, 1913, was about 39.8 per cent. of the total quality raised for market in 1912, which compares with 33.1 per cent. of the 1911 crop similarly held on January 1, 1912; 40.2 per cent. of the 1910 crop on January 1, 1911, and 41.2 per cent. of the 1909 crop on January 1, 1910.

The quantity remaining in the hands of dealers on January 1, 1913, was about 9.8 per cent of the total quantity raised for market in 1912, which compares with 8.6 per cent of the 1911 crop similarly held on January 1, 1912; 10.9 per cent of the 1910 crop on January 1, 1911, and 9.9 per cent. of the 1909 crop on January 1, 1910.

The quantity remaining in the hands of both growers and dealers on January 1, 1913, was 49.6 per cent. of the total quantity raised for market in 1912, which compares with 41.7 per cent. of the 1911 crop similarly held on January 1, 1912; 51.1 per cent. of the 1910 crop on January 1, 1911, and 51.1 per cent. of the 1909 crop on January 1, 1910.

To help our readers to forecast the future we give the crops for the four years and some prices as follows:

Yields—1912, 420,647,000 bushels; 1911, 292,737,000 bushels; 1910, 349,032,000 bushels, 1909, 389,195,000 bushels.

Prices at Chicago—February 7, 1913, 40@48c; February 7, 1912; $1.02@1.05; February 4, 1911, 42@44c; February 7, 1910, 38@40c. April 6, 1912, $1.25@1.33; April 8, 1911, 53@65c; April 7, 1910, 17@26c.

The following tells the balance of the market story:

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on January 25, 1913, with comparisons, are shown in the following table: (The sign —before figures means decrease, X indicates increase.)

	Jan. 25 1913 Bushels	Change from 2 wks. before Bushels	Change same period last year. Bu.	Change from a year before Bushels	Change from 2 yrs. before Bushels
WHEAT	72,328,000	—1,510,000	—2,370,000	X 4,918,000	X 20,204,000
CORN	11,600,000	X1,693,000	X 291,000	X 4,118,000	— 2,762,000
OATS	13,549,000	X 547,000	—1,443,000	—4,924,000	—14,837,000
BARLEY	6,113,000	— 444,000	— 304,000	X 2,502,000	X 3,550,000

The visible supply of wheat in Canada on the same date was 47,992,000 bushels. This is 813,000 bushels less than two weeks before and 2,459,000 bushels more than a year before. The visible supply of oats was 8,756,000 bushels on the same date, 667,000 more than two weeks before and 3,350,000 bushels more than a year ago.

CLOSING PRICES OF CASH GRAIN

WHEAT, NO 2 RED

Cash grain closed in the leading markets on February 7, two weeks before and a year before, as follows:

	Feb. 7	2 wks. before	A Yr. before
Chicago	1.11 @1.13½	1.12 @1.15	97 @..98
St. Louis	1.08 @1.12½	1.09 @1.14	1.00
Kansas City	1.00 @1.04	.87½@ .96½	1.00
Cincinnati	1.11 @1.14	1.12 @1.14	99 @1.02
New York	1.09 @1.10½	1.09 @1.10	99½@1.01

CORN NO 2 WHITE

Chicago	51 @52	49½@50	63¼@64
St. Louis	52¾@53	49	67½
Kansas City	51	49½@50	68½@69½
Cincinnati	55 @56	54 @55	68 @69
New York	58½	56½	71¾

OATS NO. 2 WHITE

Chicago	36¾@37½	34 @35½	50½@51
St. Louis	36	33½@34	51 @52
Kansas City	35½@35¾	34¾@35½	51½@52½
Cincinnati	37 @38	37 @37½	52 @52½
New York	39 @40	38½@39	56

FUTURE GRAIN PRICES

Chicago grain futures closed on February 7 and two weeks before, as follows:

WHEAT—May, 93⅞c; July, 91⅝c; September, 90¼c. Two weeks before, 93⅞u, 90½c, and 89½c, respectively.

CORN—May, 53¾c; July 54½c; September, 55¼c. Two weeks before, 52c, 52⅞c and 53½c respectively.

OATS—May, 35⅛c; July, 35c; September, 34⅞c. Two weeks before, 34½c, 34¼c, and 34⅜c respectively.

COTTON

February 7.—Middling upland cotton, 12.95c; middling gulf, 13.20c.

The price of cotton is 5 cents per hundredweight higher than it was two weeks before. It is $3.40 per hundredweight higher than a year before.

LIVE STOCK

Indianapolis Stock Market, February 7, 1913

CATTLE—Range of day's paying prices for steers ..... $6.15@7.65
Range of day's quotations for steers ..... 6.00@8.50
Good to choice steers, 1,300 lbs. and up 7.75@8.50
Good to medium steers, 900 to 1,100 lbs. 6.00@7.25
HOGS—Range of day's paying prices ..... 6.00@8.20
Range of day's quotations ..... 6.75@8.20
Best heavies, 210 lbs. and up ..... 8.05@8.20
Common to choice lights, 130 lbs to 230 8.15@8.30

The price of steers is practically unchanged from two weeks before. The price of hogs is from unchanged to 40c a hundredweight higher than two weeks before.

CHICAGO PRODUCE MARKET

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last Week	Last Year
Monday	92	106	105
Tuesday	33	62	152
Wednesday	25	30	52
Thursday	26	39	71
Friday	26	42	67
Total, 5 days	196	279	448

There was more activity in the trade today, but supply on hand was ample for the requirements and prices remained without a material change. Receipts were moderate, reported at 26 cars, but there were many cars left over from earlier arrivals and supply was ample. Buyers wanted fancy goods and were willing to pay a slight premium for the right kind.

Sales reported were: Wisconsin, in bulk—2 cars at 42c, 3 cars at 43c, 2 cars at 44c, 3 cars at 45c, 2 cars at 46c, 2 cars at 47c. Michigan sacked—1 car fancy at 48c.

Per. bu. bulk or sacked, Wisconsin, Burbanks, Kings or Rurals, ordinary to choice 40@48c
Fancy Rurals, possibly a shade over.
Minnesota, round white, bulk or sacked...41@47c
....Russets in sacks ..... 45@50c

NEW POTATOES—Abauot 25c decline in prices has taken place the last couple of days. They have not been moving as fast as received. This caused a weaker feeling.
Per barrel, No. 1 ..... $6.50@
No. 2 ..... 5.50@

The price of old potatoes as 2c to 5c a bushel lower than two weeks before. The price of new potatoes is 50c a barrel lower than two weeks before.

SWEET POTATOES—The market remains very quiet. Demand lately has been small. Cold weather no doubt has helped to make it so. Offerings, while not large, are ample. The best goods are held with some show of steadiness, but stock that is at all faulty in any way rules easy. Prices vary with the quality.

BEANS—The material are to noted. Red beans in clear color are steady. They sell to ... very moderate. Such as are stained rule rather slow and quiet. All other beans are quiet. Hardly any trading in Brown Swedish and they are fairly plenty. Red Kidney have a light trade. Market for limas steady with inquiry fair.

Pea Beans—
Hand-picked, choice $2.25@2.27
Prime ..... 2.15@2.20
Stock faulty ..... 1.50@1.75

Mediums nominally about same as pea beans.
Red Kidneys, choice 2.25@2.30
White kidney, nominal.
Brown Swedish, long 1.25@1.50
Round ..... 1.25@1.50
Limas, per 100 lbs ..6.40@6.50

The price of pea beans is 20c to 25c a bushel lower than two weeks before. Limas, 20c @ 25c a bushel lower than two weeks before. Other kinds unchanged.

HAY—Receipts, 1,244 tons; shipments, 51 tons.
Choice Timothy hay $15.50@16.50
No. 1 Timothy ...13.50@14.50
No. 2 Timothy ...11.50@12.00
No. 3 Timothy .. 9.00@11.00

The price of timothy hay is 50c a ton higher than two weeks before. A year ago the price of choice timothy hay was $23.50@24.

STRAW—Rye straw quotable at $7@7.50. Oat straw at $6@6.50. Wheat straw, $5.50@6.

Oat straw is 50c @$1 a ton lower. Wheat straw is $1 a ton lower than two weeks before.

BROOM CORN—The demand remains very moderate and it is usually for good corn.
Per ton, Illinois corn, no real nice quality on sale ..... $50.00@100.00
Oklahoma ..... 50.00@ 75.00

No change in the market from two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	3,158	5,476	2,257
Tuesday	4,911	4,780	1,169
Wednesday	2,911	4,384	1,976
Thursday	5,213	4,214	1,221
Friday	3,794	3,453	1,346
Total	20,055	22,307	7,969

Receipts, April 1, 1912, to Feb. 1, 1913, 2,897,000 cases.
Receipts, Apr. 1, 1911, to Feb. 3, 1912, 2,486,863 cases.
Receipts, Apr. 1, 1910, to Feb. 4, 1911, 2,901,276 cases.

An easy feeling exists, and prices were quotably ¼@1c lower for fresh and unchanged for storage.

Merchants wish to have it understood that in purchasing eggs by grade this season from parties at interior shipping points they will insist on receiving the grade and quality bought and contracted for. Heretofore buyers here have been rather lax and have often taken eggs which would not pass inspection as the grade bought, rather than have any controversy about the matter and in some instances this "Good Samaritan" act has been to their disadvantage and made them losses. Therefore, the advice to country dealers is to be more careful in packing. Be sure your eggs will grade. With improved packing you are sure to get full value and better prices.

Miscellaneous lots, cases returned, 17@22½c, depending on quality.

Ordinary Firsts quotable at 18@22c.

Firsts quotable at 23@23¼c, with sales as these figures.

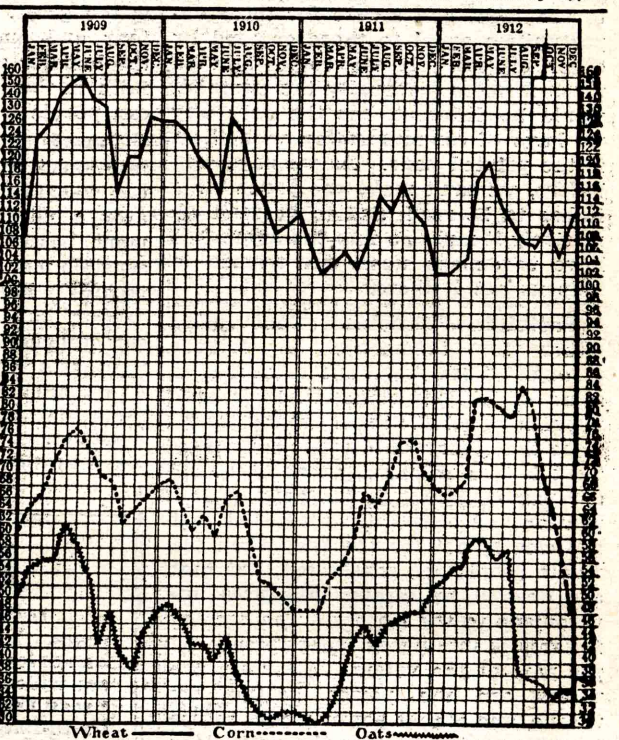
Checks—Fresh quotably 14@14½c per dozen and storage 12@13c.

Dirties—Fresh quotably 16 per dozen and storage 13@15c.

Refrigerator eggs were steady and Firsts quotable at 17@17½c to 18c for some very nice lots.

The price of eggs is practically unchanged from two weeks before.

APPLES—Cold weather the last few days has checked trade because there is some risk in moving apples. When it becomes milder trade will pick up again. All nice fruit remains steadily held. Small apples not so strong. An effort is being made to coo-perate with the retailers and devote two days—to-morrow and Saturday—to special apple sale days. Special prices will be made and considerable stock it is expected will be worked off.



This chart shows the highest monthly cash price for the three leading grains at Chicago, for a period, 1909 to December, 1912, inclusive. The figures on right and left margins are prices in cents. The lowest prices for December were as follows: Wheat, 98c; corn, 46c and oats, 33⅛c. This chart will be continued.

Force a New One In and Force An Old One Out

Notwithstanding that the growers of sweet potatoes in the Southern states are having great difficulty in finding profitable markets for their crops, the paternal Agricultural Department at Washington sends out this advice:

"There is a constant and growing demand for sweet potatoes in the north and west where the markets have not been sufficiently supplied. The sandy cut-over timber lands of the Southern states are well adapted to the growing of sweet potatoes. With the growing demand for sweet potatoes in the north and west, there is every inducement for southern farmers to adopt improved culture and storage methods and make the sweet potato a most important money crop."

Market no More Crops the Old Way the Equity System is Better

WHEN TO SELL WHERE TO SELL HOW TO SELL

Tell us below what you have to sell now, or will have in the future, and we will help you to get it to the best market. This applies to grain, live stock, cotton, vegetables, fruit, hay, eggs, poultry, in fact any farm crop. Fill out the following blank very plainly. No attention will be given to blanks illegibly written.

In and About the Fields

Production and Marketing

WHAT BECOMES OF THE CORN

CORN is the greatest grain crop of the United States, and the United States is the greatest corn producer. This country produces three-fourths of the total product of the world. The crop of 1911 was about two and a half billion bushels (2,531,000), and it is interesting to know what becomes of this vast quantity of corn. The Department of Agriculture accounts for 513,000,000 bushels as follows:

	Bushels
Used in flour and grist mills (Census	245,000,000
Used in manufacture of glucose and starch	40,000,000
Used in manufacture of distilled liquors, 1910	21,000,000
Used in manufacture of malt liquors	14,000,000
Used for feed in towns	126,000,000
Exported	45,000,000
Balance	28,000,000
Total	513,000,000

This is only about one-fifth of the crop, and the balance is consumed on the farms. This part of the consumption is given by the department in this table:

	Bushels
Horses and mules	728,000,000
Swine	724,000,000
Cattle (other than milch)	254,000,000
Milch cows	231,000,000
Poultry	97,000,000
Human beings	92,000,000
Sheep	80,000,000
Seed	23,000,000
Other, or doubtful	103,000,000
Total	2,312,000,000

These estimates are, of course, only approximately correct, and they total 294,000,000 bushels more than the crop. But the point we want to emphasize is the small part of the crop that needs to be controlled to enable farmers to make the price. We may safely say that if the part that is consumed off of the farms, about one-fifth of the crop was held for an agreed price, that price would be paid and that would be the market price of corn. There are about 5,000,000 farms producing corn. If each of these would control an average of one hundred bushels that was not controlled, and sell only when the set price would be paid, then the market price would be made by the farmers. True, some of the corn consumed on farms was bought from other farms. But we declare that this would not affect the proposition if the supply for other purposes was controlled. The Department of Agriculture further confirms this view of the matter in its estimate that 20.5 per cent. or one-fifth of the 1911 crop was shipped out of the county where grown. The shipping part makes the trouble of too low prices when there is such trouble particularly as it is responsible for the visible supply. Control this shipping part and price-making will be easy.

TO GET CAPACITY OF ROUND CRIBS

SOME of our readers may have round slat corn cribs, the contents of which they would like to measure. The first step in getting the desired result is to ascertain the contents in cubic feet. This is obtained by multiplying the diameter by itself, this by the decimal fraction .7854 and the product of the depth of the corn in the crib. For illustration, suppose one wished to find the number of bushels in a circular crib having a circumference of sixty-four feet and a depth of nine feet. To get the diameter divide the circumference by 3.1416, the result being 20.3 feet. Squaring or multiplying this by itself gives 412.09 square feet, and multiplying this by .7854 gives 323.65 as the area of the crib. The contents are then obtained by multiplying the area by the depth, nine feet, which gives 2,912.89 cubic feet. A bushel of corn containing a good deal of moisture is usually estimated at 2.5 cubic feet, and dividing the total contents in cubic feet by this figure gives 1,165.15 as the number of bushels in the crib. The same formula will give the contents of any circular crib where the circumference and depth are known.

Littery

"Your master seems quite literary," the visitor said to the maid, as he noted the books and papers scattered about the room.

"Yes, sah, he is shore littery," replied the maid. "He litters things all over this house."

Farm Canning Factories

Mr. Farmer, you are the man to can your own crops, and do so at home, using all the family large enough to work, to help you grow and can same. Read this:

"Mr. Thomas M. Brown, Springfield, Mo.

"Dear Sir: I am through canning for 1912. Packed 4,400 cases tomatoes. I grew four acres; bought the rest from neighbors at $8 ton.

"I made, after paying all expenses and paying for the tomatoes I bought, over $1,800, and feel good over results for a small farmer with small investment in your $330 outfit.

"In the last five years, paid off a big mortgage on my farm, paid a lot of outside debts, improved my farm and stocked it up in good shape and have money in the bank. Made it all on your factory.

"When I bought it I was a poor man, badly in debt with a wife and several children to care for.—J. H. Spears."

If you want to start in the business write Thos. M. Brown, of Springfield, Mo., for free booklet. It will give you over one hundred testimonials with the addresses of the canners writing same.

He sells his factories on time or 10 or 15 per cent of the pack as payments. He makes sixteen sizes for the farm or large community, prices $85 to $850. You can own a home or pay the debt on the one you have if you will try.—Adv.

PUZZLE

Name the ten Advertisers Represented below

Just a little of your time may win for you the first prize in this interesting contest

EXPLANATION

We reproduce above portions of ten advertisements in this issue. For example: The first one is from the advertisement of the International Harvester Company. The others you are to find.

CONDITIONS

In addition to the solution of this puzzle it is a condition that each contestant, in order to have his answer considered, shall write a special letter, telling us what he or she would like to see advertised in Up-to-Date Farming that is not now being advertised. In case of a tie, the prizes will be awarded to the ones writing the best letters. Answers to this contest must be written entirely separate from orders or letters on other subjects, otherwise they will not be considered.

Contest open to every reader living outside of Indianapolis and Marion County, Ind.

All answers to be considered must be received before March 1.

We can not answer letters regarding this contest; the conditions given must be complied with.

PRIZES

First price, to correct answer and best letter $3.00

Second prize 2.00

Third prize 1.00

A present will be given to each of the next 10 sending correct answer and best letter.

ANSWERS TO JANUARY 15 PUZZLE

1. American Separator Company
2. Stark Bros. Nursery and Orchard Company
3. The American Well Works
4. Lincoln, Leonard and Company
5. L. L. Olds Seed Company
6. Hercules Manufacturing Company
7. Peerless Wire Fence Company
8. Wood Bros. Silo Company
9. The Ohio Galvanizing and Manufacturing Co.
10. Elk Tailoring Company

PRIZE WINNERS

1st Prize, $3—Mrs. Edward Ranebow, Battle Creek, Mich.

2nd Prize, $2.—Stella Green, Milton, Ky.

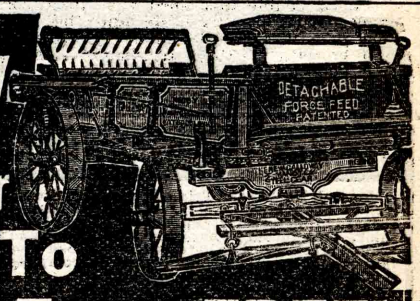
3rd Prize, $1.—Edwin Pollard, Sturgeon, Mo.

Honorable Mention, Beautiful Set of Post Cards.—Lola Miley, Ind.; Fay Buckman, Mo.; Mrs. Mary Mendenhall, Ohio; Leroy Smith, Pa.; Marie White, Ill.; Mrs. John Nead, Kas.; Jas. C. Byrne, Ill.; Geo. McLeod, N. Y.; Ellen B. Woods, Okla.; Mary B. Spencer, O.

Address PUZZLE EDITOR, UP-TO-DATE FARMING, INDIANAPOLIS, IND.

Winners of February 15 Puzzle announced March 15. **Watch for another Puzzling Puzzle March 1**

Here's My New 1913 Model Galloway Spreader That I Want To Ship To Your Farm FREE!



No payment down—no bank deposit—no lease, notes or mortgages—no red tape or obligations of any kind whatever. I'll ship you this new, 1913 Model Galloway right to your farm for 30 or even 90 days trial absolutely free. I'm going to make this spreader prove its worth to you without a word of argument on my part whatever. Here's the way I'll do it: I'll put the spreader on your farm for a 30 to 90 days trial absolutely free. I'll put it right straight up to you. Figure out a series of tests that would make scrap iron and kindling out of any other spreader made—then try them on the Galloway. Load it up as full as she'll hold with the toughest, tramped down or frozen slough hay manure. Let your team trot and slam it in gear! Do you think that there is one other manufacturer in the world that would dare to hint at such a test as that? You know there isn't! But if you can think of a severer test, go ahead. I'll take all the risk and let you be the sole judge. If you think you can possibly get along without the Galloway after you have had the free trial, just send it back to me. I'll pay the freight both ways—you won't be out one cent. If you want to keep it, I'll guarantee to save you $25 to $50.

Get My Big 1913 Proposition NOW!

Four years ago I started working on the biggest, finest and most daring plan I've ever offered. Now I've got it perfected. I can't explain it here—there isn't room. But if you'll write me at once I'll tell you how you may get one of my 1913 Model Spreaders *partly or entirely without its costing you one cent.* I won't ask you to do any work—any soliciting or any canvassing. It's the fairest, cleanest, most amazingly generous, co-operative plan that you or anybody else ever heard of. Write me and I'll tell you all about it.

My Regular $1 Book—"A Streak of Gold"—FREE

One of the most valuable books any farmer ever held in his hands. Explains fully, in plain language, how to make manure the greatest money crop on the farm, how to spread it, care for and use it. I'll send it free, also my 1913 Spreader Catalog and full details of my 1913 proposition. Send a letter or postal.

Wm. Galloway, Pres. WM. GALLOWAY CO., 5019 Galloway Sta., WATERLOO, IA.

Waste and Annoyance of Stumps in a Field

YOU do not like a stumpy field. Neither do we. We object to stumps because they are so much and forever in the way, a worry to teams and a danger to machinery. These are matters of your experience as well as ours, and it applies to thousands of farms that have been cut out of forest lands.

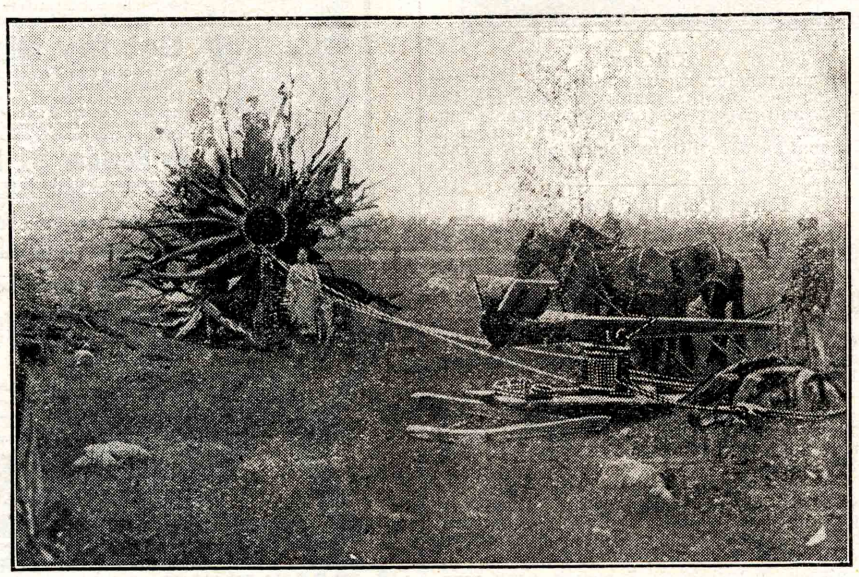
But we have been making some calculations, and have greater reasons for disliking stumps than those. We have seen many fields in which stumps stood so thickly that with a team and wagon one had to pick his way carefully to get through. In Arkansas and other places where "cut off lands," lands from which the timber trees have been taken, are being brought into cultivation the stump question is a serious problem not only of the work but of the production. Stumps standing as thick as the forest trees stood occupy or prevent the cultivation and production of half or more than half of the land. This lack of production must therefore be added to the increased difficulty of cultivation. In such case the farmer must "scratch over" a forty-acre field to have at best an imperfect twenty-acre crop.

All stumpy fields, of course, are not so bad as that, but stumps occupy more space than the average farmer is liable to think they do. No matter which way the field is worked, the unbroken part about the stump is not less than two feet on each side of the stump and then it points off in the direction of the furrows about six feet each way from the stump. Here is quite a bit of ground, enough for a good onion bed. If the field is planted in corn or any other crop to be cultivated in rows, the team and the plow or cultivator will destroy at least one row on each side of the stump until they can get back again into the proper row. This gives an idea of the loss the stump involves. Multiply this by the number of stumps in the field and an idea may be had of the total loss.

Another question enters into this proposition. The place where the tree grew and the stump with its smaller roots has partly decayed, is "new ground," virgin soil so far as cultivation is concerned, and it is reinforced by the humus and other elements that have come from the decaying roots and stump. Removing the stumps, therefore, practically adds that much new ground to the field, and it is more productive than was the field when it was all new.

We agree that the removal of stumps is a hard proposition, and many good farmers have permitted them to remain for lack of improved appliances to aid in their removal. But this is an age of invention. There is an improved machine adapted to every requirement of the farm, and we are assured that a stump puller is now made that makes the dislodgment of these non-rent-paying occupants an easy, or, at least, not a difficult job.

PULLING HEDGE WITH A LATE TYPE TRIPLE POWER STUMP PULLER



THE LARGEST STUMP QUICKLY AND EASILY PULLED. THEN THE LAND CAN WORK FOR THE FARMER.

Now Selling at FACTORY Prices
FREIGHT PREPAID

This is a special 30-day sale of 10,000 sheets of Edwards Steel Shingles. Our direct-from-factory prices are suprisingly low. And we now pay all the freight. Here is a great bargain—an opportunity to buy the most **durable, fireproof** roof for much LESS than the commonplace kind.

Edwards STEEL Shingles
outwear **FOUR** ordinary shingle roofs, are ten times easier to put on, and yet, THEY ACTUALLY COST LESS THAN WOODEN SHINGLES. They cost LESS, mind you.

Do not judge Edwards Steel Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely prevents rust from ever getting a foothold, as 100,000 delighted owners of Edwards Roofs have found out. It's the famous Edwards Tightcote Process applied to genuine Open Hearth Steel.

STEEL Shingles Easily Put On
You don't have to nail these steel shingles, like wood shingles, ONE AT A TIME. **Put on as high as 100 at once,** for they come in big sheets ready to nail on sheathing or old roof. Much easier than putting on wood shingles. No extra materials to buy, no painting to do, no tools to borrow. Your hired man can do the job.

No Danger of Fire
No, Sir, you don't ever hear of any building burning up if it is roofed with Edwards STEEL Shingles. It's the man who roofs with **wooden** shingles or **composition** paper who loses by fire his **house or barn.**

Why risk life and valuable property when you can make your buildings practically fireproof simply by roofing with Edwards STEEL Shingles?

Every Edwards roof is guaranteed against lightning by a $10,000 bond.

WRITE! Send postal at once for our latest Roofing Book No. 291 and Special Factory Prices. Give size of roof, if you can. (94)

BIG FREE BOOK ON CLOVER
A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and milk. It explains the cause of clover failures; how to avoid **winter killing;** how to prevent **ground heaving;** how to guard against the loss from **heat and drought;** all about the causes of **"clover sickness"** and how to deal with it. Hundreds of other questions, covering sixteen clover varieties, are fully answered. Ordinarily this book sells for 35c, but for a short time we will mail a copy free, or until a certain number have been distributed. Write at once.

FREE BOOK ON

ALFALFA

How you can grow it on your land
How to get "catch" first planting
How to select and prepare the soil
How to get more than average crops

These and hundreds of other questions that you want answered are clearly and distinctly covered in our new book just issued entitled "Alfalfa—Wonder Crop". This remarkable book contains a priceless fund of information about alfalfa growing, secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. In simple language, easy to understand, it tells just the things that you want to know before you start to raise this greatest of all $cash money$ crops. This book will convince you that you have some land on your farm where you can profitably grow alfalfa. This information was secured at a great cost of time, money and research. It tells how to grow alfalfa, how to get results from first planting, how to select the field and prepare the soil. It tells all about fertilization, plowing, liming, preparing the seed, when to plant and how to plant. Tells what to do during the growing period, how to get bigger than average crops, and how to cut and cure. The contents of this book are worth many dollars to the farmer interested in growing alfalfa. This book is ordinarily sold for 25 cents but we will gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r., 59 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

Here the scarcity of timber for fencing induced the planting of hedges, for in those days stock, wild and tame, had to be shut out of the fields. These hedges in many places have grown to be young forests in strength, and they occupy broad strips of the most fertile lands. Farmers have tried various means to get rid of them, now that wire fencing has become both cheap and popular. They have tried digging an almost impossible job, and they have tried burning, but even the fire leaves the roots there and ready to grow again. A recent invention, however, the same machine that takes out stumps so easily, we are assured will remove these hedges root and branch. We are glad to give the above cut of the machine in operation. The picture is made from a photograph, and, therefore, it cannot exaggerate the facts. Note the size of the hedge, its breadth and thickness, and the cleanness of the ground where it has been used. This is sure adding valuable new ground to the fields and putting it in good condition for cultivation. It will certainly pay our readers to get more information concerning this new all-steel triple power stump puller.

FARM NOTES

THE wheat crop of Argentina, Australia, and New Zealand for 1912, is reported to be 321,000,000 bushels, or about 78,000,000 bushels greater than it was a year ago.

During the ten years between 1897 and 1907, it is reported that the Black Hills beetle destroyed more than a million board measure feet of the merchantable sized timber of South Dakota. The same insect has been found to threaten similar destruction in the Tongue River Indian Reservation of Montana. But under the auspices of the National Forest Service, the Cheyenne Indians are making successful war against the pests, and are saving much of the valuable timber of the reservation.

The Department of Agriculture says the ocean freight rates on heavy grains such as wheat, corn, barley and rye, from New York and New Orleans to Liverpool for the last quarter of 1912, were about double what they were the year before. No reason for the increased rate is given.

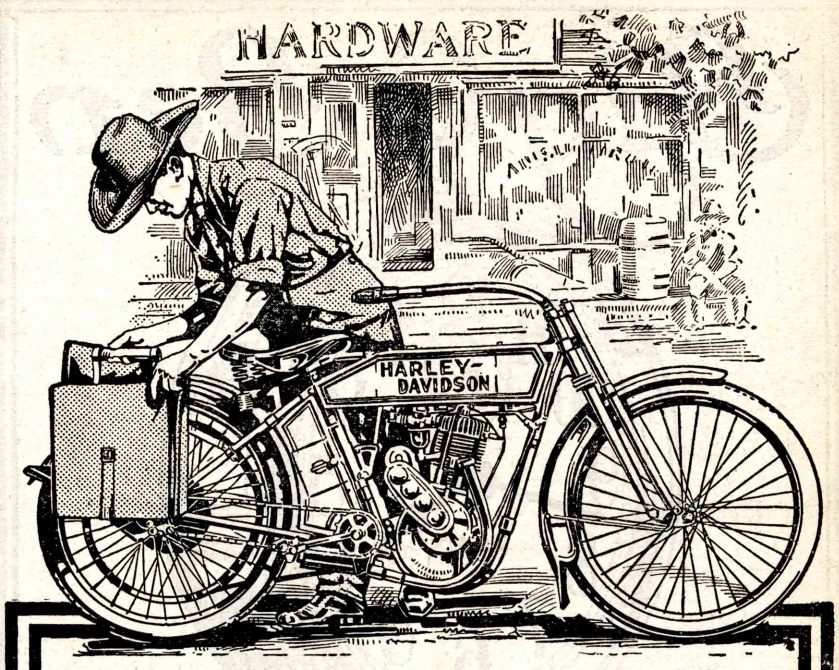
In Germany the average acres cultivated per hand is 10 acres, while in the United States the average per hand is forty acres.

The merchant mills of this country used 471,306,986 bushels of wheat in 1899, 494,095,083 bushels in 1904, and 496,480,314 bushels in 1909. In 1899 these mills produced 99,763,777 barrels of flour, valued at $333,997,686, or about $3.35 per barrel. In 1904 they made 104,013,278 barrels of flour, valued at $480,258,514, or about $4.60 per barrel. In 1909 they produced 105,756,645 barrels of flour, valued at $550,116,254, or about $5.25 per barrel. Note the increase in production and the constant increase in price of a manufactured commodity. It would be interesting to know the price paid for the wheat during those years.

The seed corn is a proposition which must not be ignored, and now is the time to get the seed ready and to know that it will not only germinate, but that it will produce vigorous plants. If you expect to plant seed of your own growing, select the best and most perfect ears, that have on them the firmest and most perfect grains. It will pay to test every ear.

Soil Salvation

Land which is properly terraced, ditched, drained, or irrigated brings just about whatever price the owner sets, and if he doesn't want to sell, better crops are his yearly reward. A valuable treatise on Terracing, Ditching, Draining, Irrigating, etc., called "Soil Salvation" is published by Bostrom-Brady Mfg. Co., 126 Madison Ave., Atlanta, Ga., and will be mailed by them free to any of our readers upon request, who expect to do Terracing, Ditching, Draining or Irrigating this winter and spring.—Adv.



Ten Miles For A Cent

A HARLEY-DAVIDSON MOTORCYCLE can be operated at a cost of from one-tenth to one-sixth cent per mile. It costs nothing when idle and will last for years. It is ideal for quick trips to town for repairs and provisions and will carry an extra passenger or freight weighing up to 250 pounds. The

HARLEY-DAVIDSON

is the only motorcycle which has a Ful-Floteing Seat. This device does away with the jolts, jars and vibration so unpleasant on the ordinary motorcycle.

The Free-Wheel Control, another patented feature, does away with the objectionable hard pedaling or running alongside to start. Instead the Harley-Davidson can be stopped and started by the mere shifting of a lever.

Over 3700 Harley-Davidsons (more than all other makes combined) in use in the Government R.F.D.Service Send for literature.

Great Horse Story

"Kate and Queen"

By Prof. Jesse Beery

Free

A most wonderful and unheard of book offer. It equals the famous "Black Beauty" in human interest—surpasses it in practicability. "Kate" a victim of poor handling is vividly contrasted with "Queen" who was more fortunate. You sympathize with one—rejoice with the other—even as you sigh for the slum waif and laugh with the child of fortune.

Prof. Beery has skillfully woven into this intensely interesting and true story, many valuable suggestions for handling horses—a result of a lifetime's experience.

SPECIAL FREE OFFER

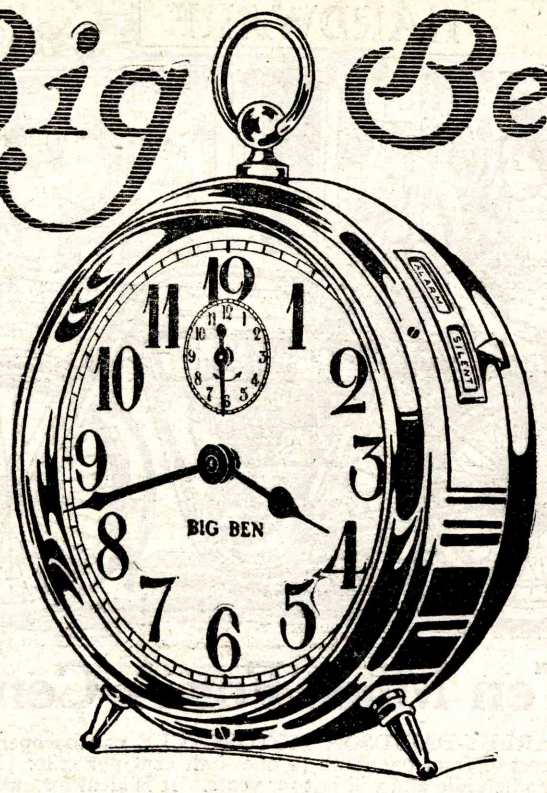
Prof. Beery desires that every horse owner, trainer, breeder—everyone interested in horses—should read this great story. To make it possible, for a short time he offers every interested horseman a copy FREE. He only asks that ten cents be sent to cover postage, and the names and addresses of five other horse owners. Send U. S. Stamps or coin. If you have even a passing interest in horses—if you own, train or breed them, you will gather from this book a fund of knowledge worth many dollars to you. Send for copy.

FREE With each book we also send free a beautiful colored picture of Queen—oil painting effect—suitable for framing.

PROF. JESSE BEERY, Box 715 Pleasant Hill, O.

"Queen"

Big Ben



Use Big Ben All Day Long

Big Ben not only gets you up on time every morning, but he serves the whole family all day long as a reliable clock to tell the right time by.

He's really two good clocks in one—a crackerjack of a time-keeper—a crackerjack of an alarm.

He can ring you up in the morning just when you want, and either way you want—five straight minutes or every other half minute for all of ten minutes.

If you're a light sleeper, turn on the half minute taps before you go to bed. If you sleep heavily, set the five-minute call and you can slumber then without the get-up worry on your mind.

Then when you're up and doing, carry Big Ben downstairs into the living room so that the whole family can use him to tell the right time by. He stands seven inches tall and his great big open face can be seen distinctly across the largest room.

Big Ben is triple nickel-plated and wears an inner vest of steel that insures him for life. His big, bold figures and hands are easy to read in the dim morning light. His large, comfortable keys almost wind themselves. He rings five minutes steadily or ten intermittently. If he is oiled every other year, there is no telling how long he will last.

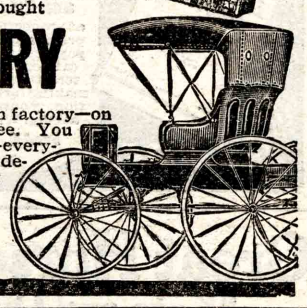
He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois*, will send him anywhere you say, express charges prepaid.

Do You Want to Save

$25.00 TO $40.00 On Your New Buggy

Phelps says he'll save you $25 to $40 on a genuine Split Hickory. Is it worth a postal to find out? Is it worth a postal to see the 140 styles of vehicles and complete line of harness all shown in Phelps' new book. Is it worth a postal to learn the *reasons why* 167,000 *other* people bought

SPLIT HICKORY



vehicles? Phelps sells direct from his own factory—on 30 days' Free Road Test—2 years guarantee. You keep all the middle profits—you take no risk—everything is clearly photographed and accurately described and all *guaranteed*. Why not get Phelps' book so you can compare with others. Phelps pays postage if you write him a letter or postal. Just say "Send Book."

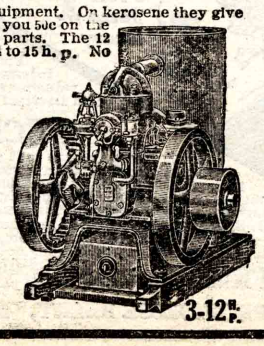
Station 99 Columbus, Ohio

Run on Kerosene—Cut Fuel Cost in Two

Ellis Engines run on gasoline, kerosene or any fuel oil without extra equipment. On kerosene they give more power than other engines on gasoline. Do more work and save you 50c on the dollar in fuel. Strongest, simplest engines made—only three working parts. The 12 h. p., two cylinder opposed engine will do any work requiring from 14 to 15 h. p. No vibration. Low first cost, low cost to run, easy to operate.

ELLIS ENGINES



have patent throttle, giving three engines in one. Force-feed oiler, automobile muffler, speed-changing governor and many other exclusive features. Run either way—reversible while running. Buy direct from factory and save money. We pay freight, 10-year guarantee, 30 days free trial. Write for new catalog showing 1913 Models with special prices.

ELLIS ENGINE CO., 114 Mullett St., Detroit, Mich. 3-12

Turning Idle Hours Into Profit

THE expression so often heard that the gasoline motor is outstripping "Old Dobbin" is even truer than many people are willing to admit.

Homer King, living sixteen miles out of Indianapolis, is the lucky discoverer of a way to turn idle hours to profit and also save the feed on one horse all winter. He tells the following story:

Two years ago found me heavily in debt and striving vainly to pay interest and principal on my twenty-acre truck farm. By dint of hard struggling I managed to accumulate enough money from my produce to pay the interest on my land and live through until another harvest.

My land supported two cows, two horses, chickens, hogs, etc., in addition to my family. My oldest son helped me with the farm work when not in school.

Now I really couldn't see why I should feed two horses all winter and get nothing in return, save one trip to town a week. This usually required a good day of hard driving to cover the sixteen miles each way. So I sold one horse and purchased a motorcycle. From that time I made all trips on the machine.

I was astonished. The round trip that usually required ten hours I now make easily in an hour each way.

The saving in time was so great that I began making two trips a week and carrying to market butter, eggs, cream, dressed poultry. On each trip to town, I took orders for produce for future delivery.

That was all very well for last winter, but this season I am going the old record one better. My son now does the chores and such other work as must be taken care of during the winter months.

I have secured a job at a local factory at $80 a month, and make the trip daily on my motorcycle.

I figure that it costs me four cents each way a day to make the trip, and the $240 I make for the three winter months is clear profit, as the produce easily pays for the living expenses of the family. The upkeep of the machine is practically nothing.

With the exception of a very few days last winter, I found the country roads passable at all times, and so far this winter have not missed a single day in town.

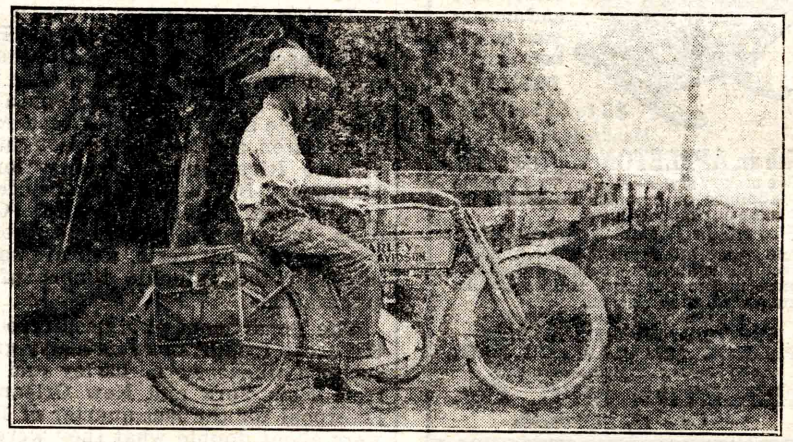
Thus, you see, I have not only solved the problem of an idle man and an idle horse on the farm in the winter, but I have taken a long step toward solving the high cost of living.

My motorcycle never eats unless it works, and it is always ready to work.

The machine furnishes swift, sure and immediate transportation and in an emergency I can hook it up to the cream separator, waterpump or grindstone. In short, I wouldn't do without my motorcycle.

Mr. King is working along the right road and in addition to the $240 he earns, he is establishing quite a good trade in fresh country produce, which always commands the highest price on any market.

It seems to us that this method of turning the idle winter hours into profit could be adopted by many others in the same position. That the motorcycle is rapidly outstripping the horse for quick trips to town is undoubted, and it only remains for many others to take advantage of this means of transportation.



TO TOWN AND BACK IS A MATTER OF MINUT ES WHERE IT USED TO BE HALF A DAY.

Prosperity of Farmers

MUCH is said now about what is called the prosperity of agriculture. Farmers ought to be prosperous. They deserve to be. Their calling possesses every element of prosperity, and farmers should prosper whether other people do or not. Commercial advantages, we mean trading advantages, have been against them for many long and discouraging years, and they have not had the political advantages to which they are entitled. Their votes are recognized and counted, but, the elections over, the interests that have "pulls" control the legislation, and measures ostensibly in favor of the farmers too often have what the politicians call "a joker" slipped into them that defeats their purpose so far as agricultural benefits are concerned.

But this is not the point. Are farmers really prosperous? Advocates of the land-bond scheme say the farmers of the United States are six billion dollars in debt. That is an uncountable sum, and there has not come from the mints of the United States, we believe, gold and silver coin enough to pay it. If that is true agriculture is not prosperous.

According to the Secretary of Agriculture the farmers of this country create annually from six to nine billion dollars of new wealth. Do the farmers keep it? Who gets it? It was recently established by sworn testimony that one man and those associated with him, controlled more than twenty-five billions of the wealth of the country. The farmers create it, but others get possession of and control it. Then are farmers as prosperous as they have earned the right to be?

There are well-to-do farmers. We would be ashamed of this agricultural country if there were not. The trouble is this: Well-to-do farmers are inclined to be satisfied, and ignore the condition of their less fortunate fellow soil tillers and stockmen. They do not appreciate the efforts to bring to farming the reasonable business advantages that other callings have, and they thus become clogs upon the wheels of progress and justice and equity. Prosperity is a fine word, but it should not be used to deceive, nor should it lull to sleep those who may feel that they are fairly well-to-do.

A Famous Book

There is no other book like it that we ever saw. And every farmer should have one. It is just brim full of good solid "horse-sense" on incubators and chicken hatching and raising. No other man but the writer of this book *could* write such a book. Every reader can have a copy free. You ought to have one; send a postal card. Have you guessed what this book is we refer to? Why, it's the Old Trusty Incubator book. Send to M. M. Johnson Co., Clay Center, Neb., for one free and mention

CLEAN UP—GET THINGS OUT OF THE WAY

WE ARE not afraid of new things. If we were we would dodge when the telephone rings, or seek a hiding place when an auto passes. But some old things we confess we are at least tired of. Valuable farms have been made where forests have been cut away. We have worked on such farms practically all our life. The big stumps were always in the way. We remember years ago hiring a man to dig out a lot of such stumps at an average price for the stumps of the field. He attacked one of the worst, and he and his son worked on it a day, and the stump still stood. He gave up the job and the stumps remained. Every year the teams were turned around them, the plows and machines caught on them, and the best spots of the field yielded nothing but vexation and trouble. New methods, now becoming common and safe, would have lifted those stumps out of that field in short order, and the saving of turning and dragging around stumps, and the land brought into productiveness by their removal, would have paid for their taking out in a single season.

There are farms that need drainage, and ditches made through them would add immensely to their value. But the plow with its shallow furrow, and the old hoe and spade and shovel have so much sweat and so many back aches marked on their handles that the farmer too often prefers to leave them in the tool house and the water on his fields. Did you ever hear of the dynamite system of ditching and drainage? It is declared and the proof is offered that the backaches may be saved and yet the water be led away and the soil made doubly productive.

This new system is even brought to the aid of the farmer in breaking up his stubborn fallow land, in getting down to the subsoil and even below, and bringing up the fresh fertility that the crop roots have been unable to find. We are told that crops have thus been greatly increased and the land values almost doubled.

And transplanting trees. Here is another new way. Trees to grow and do well everybody knows must have good ground to grow in, ground that will permit a wide outspread of roots, and that will yield its fertility. Leading and successful tree growers are using explosives to make the holes in which the trees are to be set, thus making, they say, ideal conditions for tree growth and saving the dreaded and costly, generally neglected digging to make proper places to set the trees in.

We repeat, that so many new things and processes have been introduced and have proven so successful and even necessary that we would not give them up, until we have no fear of new things, but rather welcome them in the line of progress.

The Stark Year Book has been received. Every farmer interested in fruits, fine trees, flowers or plants of any kind should send for one. This book is more than a catalog, it contains much valuable information. A copy will be sent free by Stark Bros., R. R. 52, Louisiana, Mo. Send for a copy.

Lest You Forget

Remember that a wide reading of this paper through any community will bring a great deal more money in for the crops and nothing can prevent it. Send your neighbors' subscriptions.

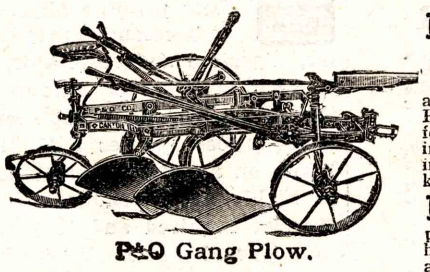
P&O

LIGHT DRAFT PLOWS

THE draft of a plow depends nearly altogether upon the construction of the bottom, the shape of the share, the curve of the mold, and the position of the side plate. These necessary details must be worked out on a scientific basis, the secrets of which can only be discovered by actual experiments in the field. As the soil differs, so also must the shape of the plow. The greater the variety of soils the greater the number of plows necessary to meet the conditions.



P&O Gang Plow.

P&O Light Draft Plows have been on the market since 1842, and all the experimental work in designing plow bottoms was accomplished years and years ago. Today there is a P. & O. plow for every kind of soil, for every condition of these soils, in all standard sizes—walking, riding and engine gang, with every kind of attachment.

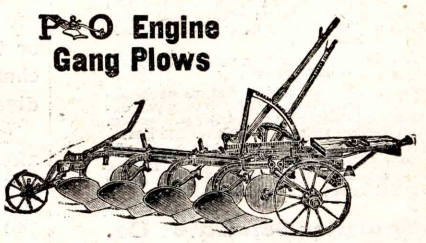
P&O Light Draft Plows are standard and supreme—made so by the use of the highest priced material, and our advanced methods of manufacture.

WE make no tools in which we take a greater pride than in the P. & O. Engine Gang Plows, made in several styles, both Mold and Disc, and in sizes from four to twelve furrows.

The P&O Mogul

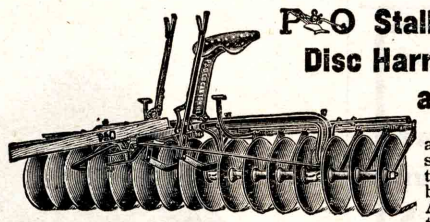
Is made with an individual lever for controlling each bottom. The levers all point to the center of the platform. This and five other patented features are exclusive, and cannot be found on any other make. The Mogul is made from five to twelve bottoms.

P&O Engine Gang Plows



P&O Junior Engine Gang.

The P. & O. Junior Engine Gang Plow is made for three furrows with a fourth bottom as an attachment. All bottoms are controlled with one lever. One man can operate both engine and plow. The P. & O. Disc Engine Gang is made with four or six discs, and with a platform for the operator.



P&O Stalk Cutters, Cultivators Disc Harrows, Corn Planters and Potato Diggers

We make a complete line of tillage implements, suitable for all soils and conditions. Remember that P. & O. Implements have been used by three generations of American farmers, and that everything we make is

Backed by an Unqualified Guarantee.

ASK YOUR LOCAL DEALER for P&O Implements and then insist on getting them. When you are ready to invest in farm implements, buy the best—the P&O line. We will gladly send P&O catalogs and other literature to any address. Write us your wants.

Talk About Simplicity

Here are all the parts that go to make up the bowl of the

SHARPLES TUBULAR CREAM SEPARATOR

and with these three we guarantee Tubulars to skim 50% closer and to continue to skim 50% closer than any other separator made.

This being the case

Why should you have to wash up seven times this many pieces—twice a day?

That is a question that is easier to ask than to answer.

There has never a claim been made for Sharples Tubulars that could not be proven: — there has never a machine left our Factory that was not guaranteed **Forever.**

Mark that—not merely a year, ortwoyears —or even five—but **Forever.**

Look into these features before exchanging your old separator, or at the time you decide that there's money in selling the cream and keeping the skimmed milk on the Farm.

Write for our interesting Catalogue 136 and arrange for a **Free test right under your own roof.** The people who ask questions are the ones who buy Tubulars.

UP TO DATE LIVE STOCK AND DAIRYING

CARE OF THE STALLION

IN ORDER that a stallion may impress his progeny with the best possible physical traits, it is essential that his muscular, digestive and respiratory systems be kept in a proper condition during the period that he is not required for stud purposes, writes J. H. McKinney. While on a route he must necessarily be highly fed to endure the physical exercise required and to perform the functions of a sire. When the season is terminated the careful owner will see that he is given a rest of, say, two or three weeks as well as a temporary change of feed in order to relieve the digestive organs for a time.

This change, of course, should be effected gradually, a little exercise being given for ten or twelve days and the food reduced by degrees until at the end of that time the grain and hay may be withheld entirely for about twelve hours and nothing but bran be fed, after which a purgative of aloes or raw linseed oil should be given. When purgation begins the bran should be largely discontinued, feeding only a small quantity, together with a light feed of grass and a little grain.

The horse ought then be allowed to remain quiet for two or three weeks so as to become thoroughly rested. He should then have a regular share of the ordinary farm work, thus paying for his maintenance and at the same time being kept in good condition by means of the exercise involved. This is the method that most easily adapts itself to the average farm conditions where but one stallion is kept.

The system of feeding will, of course, depend on the amount of work he performs. As a rule, it is well to feed considerable grass, bran and other easily digested foods, eschewing all drugs except the purgative mentioned unless in case of sickness. With the arrival of cold weather, when no grass will be procurable, he should be fed a reasonable quantity of hay and oats, as circumstances demand, together with a little linseed meal two or three times a week. It is sometimes claimed that a stallion sheds better in the spring if he is not groomed between breeding seasons. Any intelligent and well informed horseman knows better than this. If a horse is to do well and feel well it is essential that his skin be in good condition at all times, whether he is working or idle, and this cannot be unless regular grooming is given.

WHERE THERE SHOULD BE MORE SHEEP

THERE are many nice hill farms in this country on which the track of a sheep was never made, and others where but few sheep are kept and that only spasmodically. These are the farms on which there should be more sheep. Every hilly farm, unless too far toward the tropics, is a natural sheep fold; it only lacks the artificial sheds and enclosures. In our travels we have seen hilly farms in northern and eastern Kentucky, in portions of southern Indiana and Illinois, and the same are to be found in many places we have not seen, that would be the natural home of a flock of sheep. And the sheep would be profitable in themselves, besides making the land on which they pastured far more profitable.

There is an opportunity here for farmers that seldom comes to any class. Wool is scarce, and so is mutton. Lambs and fat sheep almost always bring a good price. Let the politicians and the monopolists go to the —bow-wows, while the farmers go to fine flocks of sheep, or rather bring fine flocks of sheep onto the hilly farms. Cattle for the rich bottom pastures, hogs for the clover and alfalfa fields, and sheep for the hills. That is a simple but sensible proposition.

COPPERAS FOR HOGS

Copperas (sulphate of iron) is in common use for destroying worms of hogs and is safe and effective for the purpose unless in the case of pregnant sows. It is best not to give copperas to pregnant animals. The dose of copperas is one dram for each hundred pounds of pig, and it is given once a day in slop for five consecutive weeks if thought necessary. Pregnant sows infested with worms may safely take sulphur in their feed, the dose being from two teaspoonfuls to a tablespoonful. This may be given in conjunction with salt.

The QUIET One

Five seconds after you touch the crank of the quiet running Empire Cream Separator you know it is perfectly designed, otherwise it could not run with such remarkable ease. Five seconds after you begin listening to the low, even sound of the Empire you realize

The EMPIRE is the World's Most Perfect CREAM SEPARATOR

While you hold one ear within a foot of an Empire running at full speed, you can hear the ticking of a watch held near your other ear. It isn't human nature to be satisfied with a noisy, hard turning separator. Noise and hard turning mean imperfection and cause loss.

One Practical Little Woman had almost concluded to buy a certain much advertised separator. Fortunately, before deciding, she asked for a

FREE TRIAL of the Empire—just as we offer you a free trial in your home. She tried the crank. She listened to the Empire run. She said to her husband, "Father, come here: This is marvelous. This is the separator we shall buy." We could mention many similar cases.

Ask us for free trial. Ask about our exchange proposition. Write for catalog No. 107

Rural Progress

By E. H. Clark

THE onward march of progress is finding its way to all departments of industry and the farmer should be alert to claim his share and thus better his condition. Recent statistics show stock production failing to keep pace with our population in the United States. Also that prices of farm produce have risen along with land and practically all food products. Our increasing population and the demand for greater luxury has brought forth a condition in rural affairs which deserves careful study.

The fact that livestock is not increasing normally is most lamentable and certainly regretable from an economic standpoint. Now that prices of meat and butter have reached a high point, the stockman should be in a position to realize on the shortage. In the face of this however, many cattle producers are selling their stock simply because the market is good. Like killing the goose that laid the golden egg, their policy is short-sighted. To turn rough, cheap forage into a finished product as butter, beef, pork, or mutton, means economy, not only in the use of land, but also a wise principle for the permanent welfare of a community. A people who turn out a finished product enjoy the benefits of all its stages of manufacture.

With high priced hay and stock foods, the cost of producing live stock has increased. But with the use of the silo preserving forage in its best condition and rendering it a succulent, nutritious food through all seasons of the year, we have a means of greatly lowering the cost of production. Corn silage can be produced on the farm at a cost of $2 a ton, including all expense, interest on money invested, taxes, etc., and it can be turned to a good value at from $7 to $8 per ton when fed to dairy or beef animals.

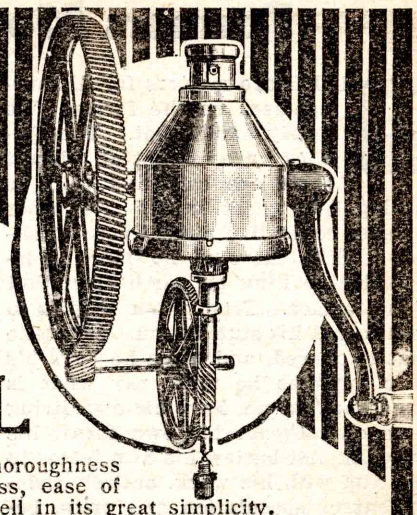
The use of the silo for horse feeding and sheep feeding is taking a most important part in these industries. Recently one of the largest importing establishments in the middle west erected a large silo and are now feeding silage to their $2,000 horses. Some of the biggest sheep feeders are now using silage and find it a most economic food.

With this new equipment for canning what is usually wasted, we will be able to cope with new conditions. Worn land can be brought back to the richest producing soil, for by keeping stock and utilizing the roughage on the farm, the soil will be built up.

As improved machinery, the science of spraying, improved market conditions and methods of transportation have come, so will follow improvements which will better our condition and make life easier and happier. To be alive, however, to these new interests, and to take advantage of them means progress and we must be ever alert to search for improvements and economic principles which will assist us in our work.

We are accused of being too progressive, too anxious to take up with new things, but this is not true. We cannot be too progressive. Fruit trees should have been sprayed twenty-five years ago when it was well demonstrated by investigators to be the best method for growing fruit. The silo was known to be a splendid method of preserving corn thirty years ago. Much of our improved machinery was invented and put on the market long years before it was put into use. Many of the improved crops, such as alfalfa, have come slowly into general use. Good methods of feeding and breeding of stock have been preached for a hundred years, but only a small per cent. of the stock farmers are putting into practice the best of these findings and teachings. No, we cannot be too progressive in our methods, providing we use good judgment in their introduction.

The Simplest CREAM SEPARATOR Ever Built — DE LAVAL



EXCELS ALL OTHERS not only in thoroughness of separation, sanitary cleanliness, ease of running and durability, but as well in its great simplicity.

THERE IS NOTHING ABOUT THE OPERATION, CLEANING, adjustment or repair of a modern De Laval Cream Separator which requires expert knowledge or special tools.

NOR ARE THERE ANY PARTS WHICH REQUIRE FREQUENT adjustment in order to maintain good running or to conform to varying conditions in the every-day use of a cream separator.

Combination Wrench, furnished with each De Laval machine, which is the only tool required in setting up, taking down or using the De Laval, the simplest cream separator ever built.

THERE IS NOTHING ABOUT THE MACHINE THAT CANNOT be taken apart, removed or replaced by any one who can use a wrench or screw driver. In fact, the only tool which is needed in the use or the operation of a De Laval Cream Separator is the combination wrench and screw driver illustrated above, which is furnished free with every machine. Visit the local De Laval agent and see for yourself its simplicity of construction.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

Farmers Moving to Town

THERE are matters for discouragement on the farms. We freely admit that. The seasons are doubtful, insect pests are bad, and price is nothing but guess work. No other business could live under these conditions. Still there is no more independent calling on earth than that of the farmer. True, when he goes to town to sell his stuff he must still take what is offered, and when he buys his home supplies he must pay what is asked; but he can have his own living—his own bread, his own meat, his own milk and butter, his own teams to help him with his work, entirely independent of speculation and price, because he need not buy these things. Besides, the farm home is the ideal place for love and happiness, and for the bringing up of a family.

In spite of all these things, some good farmers become discouraged and dissatisfied, and, after having gone far on the road to success, conclude there is a better place for them in town; they want to join the crowd that do their own price making and sell only for profits. They, therefore, sell the stock and possibly the home, and move to town, and embark in some business they may have long looked upon with admiration, possibly with envy.

A change soon comes over the spirit of their dreams. Instead of going to the garden for vegetables they must go to the grocer's. There are no nests to go to for eggs, no cows to go to for milk, no churns from which to take the butter, and even the bread and meat must be obtained from the dealers. All is different. The exhuberation of being among the stock, the pleasure of the walks in the pastures and fields, the bloom and fruit of the orchards—these are all gone. True, the toil went with them, but the town life proves as irksome as the field work was tiresome.

And the trade that was so confidently looked to for profits proves disappointing. There are others in the same business, who have learned it from long practice. They have their customers attached to them by years of service, and they know turns in buying and in selling that the new merchant just from the farm cannot know. The profits, therefore, like the imperfect bloom in the old orchard, fall without fruit. And the amount of business is so much smaller than was expected. When the farmer, now a business man, used to come to town, he often found the stores crowded with men and women anxious to trade. It does not seem to be so now. Even his neighbors, whose trade he naturally expected, do not come as often as he felt sure they would. These disappointments and unthought of leaks and losses he finds to be worse than insect pests on the farm, or even occasional drouths and floods. His invested capital don't come back, and maturing bills are hard to meet. In a little while he finds himself getting into "a hole," as business people call it.

Some farmers go into business and make successes, but not all—not many, in fact. Most of them lose their farm accumulations, and find themselves unpleasantly situated as to a home for themselves and families. We have such cases now in mind, and could give names and addresses if it were desirable. We always feel a sense of regret when we see a farmer selling out and moving to town to go into business. It is too hazardous. Besides, there are too many stores and shops already. Too many only add to the margins that must be piled up to make the divided business supporting. Better, far better, is it for farmers who see the evils coming their way, to gather their neighbors in organized efforts to turn back those evils, and secure for their calling, which is the greatest business on earth, the advantages that belong to it, and that it has lost only by inactivity on the part of the farmers themselves in the most important part of their calling, the selling part.

The Pigs Were Safe

Visitor—Mr. Bent, I think you keep your pigs too near the house.

Mr. B.—That is what the doctor said, but I don't see how it can hurt 'em.

Positive Proof

"I am assured your wife is a woman of excellent taste."

"Yes, she excels me. She showed fine taste in marrying, but I didn't."

Not While He's Away

"Does your wife raise a racket when you stay out of nights?"

"No, she waits till I get home."

THE DIFFERENCE IN BREEDS

There is no mystery surrounding the feeding habit of the dairy cow. It is common knowledge that a certain amount of feed is required to support the animal body. The amount varies with the individual cow. It is known that the feed consumed by the cow in excess of bodily support is converted into milk, provided it is the nature of the cow to convert feed into milk. If this is not the cow's nature, then the feed is converted into fat and increased weight. No system of feeding will make the cow of beef tendency convert her feed into milk. It is in this that the difference lies between dairy breeding and beef breeding.

THE KICKING COW

One man says to conquer the kicking cow with kindness. A statement of this kind leads one who has really had experience with that kind of a cow to wonder if he knows what he is talking about. Kindness is a great thing—a necessity—but it should be used before the cow is made a kicker.—Kimball's Dairy Farmer.

Stock in cold barns or out in the weather require more feed than those that are warmly housed and sheltered.

If a sow has acquired the habit of eating her little pigs the best thing to do is to fatten her and send her to market. In this as in many other cases an ounce of prevention is worth nine pounds of cure. The way to prevent sows from eating their pigs is to give them half a pound of tankage with a bran and shorts slop a week or more before farrowing time. In fact, the protein ration should be paramount during the period of gestation. If a little oilmeal is added to the ration just prior to farrowing it will produce a laxative condition of the bowels that will be beneficial.

Sears, Roebuck and Co's Special Vehicle Book is Full of Bargains Like This!

Over 49,000 of our Wonderful Metal Seat Buggies now in use. ***This is our new 1913 model.*** Everybody can see the value; purchasers figure their savings from $25.00 to $35.00. This set of three pieces given for a club of two subscribers, at 50 cents each.
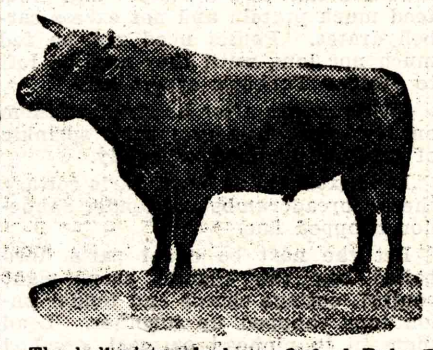
UP-TO-DATE FARMING
Indianapolis, Ind.

DUAL PURPOSES OF MILK SHORTHORNS

WHEN a farmer has decided to make cows his money making stock the question arises, What breed shall he keep? In the first place, no farmer need have two or more breeds of cattle on the same farm, writes H. W. Avery. Let him select the breed that suits him best and start in with a pedigreed herd, small or large, as circumstances may dictate, or, if he cannot afford the pedigreed females, use a pedigreed bull on a good cross of the breed desired; then, having made his start, stay with the breed as long as he farms. There is no great difference among the breeds. Each one



The bull pictured above, Oxford Duke E, is a good representative of the milking shorthorn type and is very close to the ideal. He is owned by B. W. Little, of Janesville, Wis. The milking shorthorn enjoys wide popularity on many farms where both beef and milk production are desired.

fills its own place, and locality to a large degree will determine the breed to be selected. There can be no doubt of the value of the general purpose cow, and as long as farmers make money breeding it the type will not be abandoned.

A cow that will give a profitable amount of milk and make good beef in time, except when she is in flush of milk, is a paying investment for the general farmer. Also a farmer wants a regular breeder. It is for these reasons I chose dairy Shorthorns, and I have paid off the mortgage as the result of my choice. All of my cows give upward of 8,000 pounds of milk a year and breed large, healthy calves. In my herd is a two-year-old with a record of 10,395 pounds of milk. This same heifer was second in a butter fat contest at Syracuse, 1910, all breeds competing.

The minute a cow is not wanted in the herd she will bring from $50 to $80 as beef, which makes a considerable item so long as the cow has been up to that time a profitable milker. The Shorthorn is hardy and does not require a large amount of grain, being a great forager and consumer of silage and straw.

ISOLATE THE NEW HOG

Good breeders and farmers with experience have the fixed habit of never allowing a newly purchased hog to mingle with the other hogs on their farms until he has been kept in quarantine for several weeks. Every new hog that is bought should be quarantined in a pen widely separated from that which contains the other hogs, and he should be kept there for not less than three weeks, or until there is an absolute certainty that he will not develop any disease or carry it to the other animals in the herd.

There should be charcoal before the hogs all the time. The supply may be made from corncobs. These may be burned in a pit, which should be three or four feet wide, three feet deep and eight or ten feet long. A load of cobs should be put in the pit and set afire. As soon as they are well ablaze the pit should be covered with strips of sheet iron and the cracks covered with earth so as to exclude the air. In a day or two the pit may be uncovered and a supply of charcoal will be ready for use.

Guess He Was Right

Teacher—It was not proper for you to say "You can't learn me nothing."

Pupil—Yes it is, for you just can't.

There's a Certain-teed Roofing for every building on your farm — large or small

There is a simple method of applying *Certain-teed* Ready-to-lay Roofing on all kinds of buildings—farm houses, barns, garages, poultry houses, silos.

It comes in rolls, also red, green and slate gray shingles.

Certain-teed

(Quality *Cert*-ified—Durability Guaran-*teed*)

Roofing in Rolls and Shingles

Cold weather cracks tile, rains wash and rot shingles, wash gravel off, and the sun melts tar. *Certain-teed* Roofing contains no tar or paper, it will not crack, warp or blow off, it is weather-proof and we guarantee it to wear fifteen years—*costs less* and is *easy to lay*.

Look for the *Certain-teed* label of quality—your dealer can save you money.

Valuable Book Free You will find many valuable suggestions in our new book, "Modern Building Ideas and Plans." It tells you what to do and what not to do—it suggests economies and conveniences that will save you money.

A book of this kind would ordinarily sell for $1, but as it shows the use of our *Certain-teed* Roofing on all kinds of model homes and farm buildings, we offer it to you at 25 cents. We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy FREE. If you write us, enclose 25 cents to cover cost, postage and mailing.

BUILDING THE TURKEY

WE ARE not exhibiting the skeleton in the closet that gossips claim rattles its bones in every house but their own, but below we show the big boney frame of a turkey to remind turkey raisers they are not just feeders, but builders.

You never saw a hog raiser start little pigs on corn. They get milk, the bone, muscle food, the body builder.

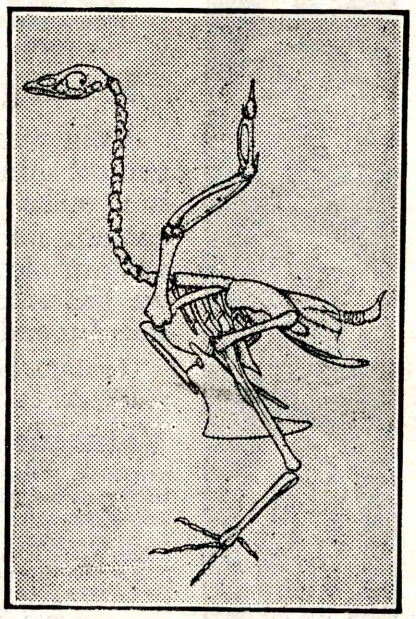

Photo by C. M. Barnitz.

A TURKEY SKELETON.

Same with the calf, human and otherwise.

So the successful turkey raiser cuts out fattener until time to finish for Thanksgiving and feeds to build bone, muscle, blood, organs—in short, a perfect physical turkey. He does this mostly with protein, and in doing so he is getting close to nature, for this is mostly what the wild turkey lives and grows on in the woods and the mountains.

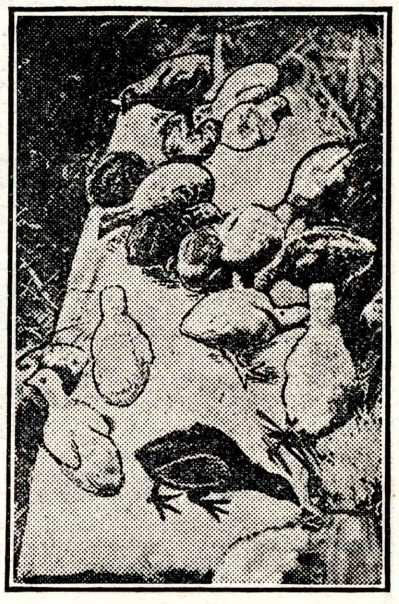

Photo by C. M. Barnitz.

TURKEY POULTS FEEDING.

The wild turkey almost lives on bugs, worms, grasshoppers, snails, and Mother Turkey is just following her natural bent when she trills her pretty poults away from that corn meal fattener out into the fields and the hills, where she shows them where to find that animal and vegetable food the Creator provides for their perfect growth.

Let the turkey raiser get back to nature; let him give Mother Turkey the eggs to hatch and poults to brood; let him remember turkeys are almost wild and that he's a builder and must feed much protein and not excess carbohydrates. Poults need not be fed much nor long until they may be left to Mother Turkey's expert care.

Thirty hours after hatch start them on dry sweet breadcrumbs, a sprinkle of grit, and have water handy.

Let next meal be equal parts cottage cheese, breadcrumbs and tender dandelion chopped fine.

Let the next be equal parts hard boiled egg (an egg to every eight poults), cottage cheese and tender onion tops chopped up together. Lead them in to pinhead oatmeal, cracked red wheat, then whole wheat, and at last let them loose on nature with Mother Turkey.

Mother Turkey's motto is, "Feed little, but often, and feed mostly protein."

Yes; that's the ticket for building bon ton perfecto turks.

Feathers and Eggshells

There is a thousand times more virtue in good old style hot whitewash and slacked lime than in a whole lot of these diluted tar disinfectants with big names that are about two-thirds water and sell for over forty cents a quart.

An Ashland (Pa.) fancier slept in the basement of his home, where an incubator was in operation. The incubator caught fire and the man was suffocated by the smoke and the house was saved with difficulty. Beware of the claptrap, firetrap incubator and handle all incubators with care.

A Boulder (Colo.) fancier gathered up his dirty Indian Runner ducks and carried them to the bathroom, where he gave them a good swim in the fancy white enamel bathtub. He then took them to a show and won first prize. His wife also deserves a gold medal for allowing such a stunt.

Starting right is one great big thing in poultry. We recently visited a plant whose proprietor was about to shut down after investing all he had and money he borrowed in the business. He failed because he started with poor stock, and with poor foundation, however brainy the management, failure is sure.

A Pennsylvania woman in attempting to cut off a turkey's head with an ax chopped off three fingers, and the turkey got away. Too sad for comment. But where was that woman's husband, and doesn't it pay better to hang up a turkey and stick than to lose three fingers, and a fat turkey too? It do.

Now when spring comes, after you have helped your wife clean house, clean up the poultry house, kill the bugs, renew the floor, whitewash and see that the yards are sanitary. Go at your work methodically and keep cool, and you'll be surprised how much more you can do than when you have no outline of work and go at it like a bull in a china egg shop.

We wish to wave the red flag before the incubator operator who is careless in cleaning and tending that incubator lamp. Within a short distance of us is the ruin of a building destroyed through such carelessness. An incubator lamp should be kept in prime condition. The best of incubators should be closely watched, and the human who persists in running an incubator in any old slouchy way is no better than any other firebug and should be drummed out of town.

C. M. Barnitz.

Poultry Chat and Chick Troubles

Mrs. J. B. Howe

A little later in the year more complaint is heard from poultry raisers about gapes, than, perhaps, any other one thing. As a usual thing, the chicks start out fine and seem to be making a fine growth until they are, say about six weeks old, and are commencing to feather up, then the trouble begins. A chick is discovered standing by himself and struggling to get his breath.

He can not eat to amount to anything, for that dreadful chocking sensation seizes him whenever he lowers his head.

Now, if ever is the time to take him in hand, for a little chick like a young baby grows rapidly worse or better. There is no standing still. If left to himself he either chokes to death or loses strength rapidly, through fasting and the irritating influences of the malady.

The trouble is caused by a collection of small worms which have fastened themselves in the chick's windpipe, and are fast assuming such size and proportion that they will soon shut off the air entirely and then the chick dies of suffucation.

A number of remedies have been given from time to time, all of which are practically ineffectual. By fai the best remedy is prevention.

However, when one sees the chick gasping for breath, it is not humane to not make an endeavor to relieve it.

About the best instrument to use is a wing feather from a grown fowl.

Pluck the bib off both sides, leaving only a soft tuft at the end.

This should be dipped in turpentine and gently inserted in the chick's windpipe deep enough to reach the bottom of the windpipe where the worms have attached themselves.

A little practice is necessary to do the work successfully. It can be better done with two people helping, one to hold open the chick's mouth, and draw the tongue out of the way; the other to insert the feather in the opening of the windpipe, which can plainly be seen, as the chick opens it, at each breath. Sometimes one or more of the worms may be plainly seen, on the end of the feather. When fully grown it is about an eighth of an inch in length One worm might not do a great amount of harm, except by way of irritation, but several hung in a cluster, when fully grown, manage to shut off the air and choke the chick to death.

Even if one does not actually dislodge the worms, the turpentine coming in contact with them causes them to loosen their hold, and they are then sneezed up by the chick.

Many so-called gape cures and preventives are on the market, most, if not all of which, are utterly worthless.

Gapes are found only when chicks are raised on infected ground. By that, we mean ground where chickens, or fowls of some kind have been kept, or reared until the soil has become befouled with their droppings.

Some seasons they are worse than at other seasons. Set your chicken coops in the spring where no chickens have been kept for at least three years, and you will have no gapes. Ground that has shown infection by producing gapes and other chick ailments should be cultivated with a growing crop, preceded by deep plowing or spading. In this way it is purified and renovated, and made fit to again keep chicks in a healthful state upon.

Chickens that have gapes sneeze them up and they, or the egg of the worm are swallowed by other chicks, and in this way the disease spreads and the infection continues.

It is claimed that if chickens are kept entirely away from infected ground for a period of three years the infection will die out.

When chicks are droopy from any cause whatever, at feathering time, which by the way, is a great strain upon the young fowls, a tonic in the drinking water, once a day is a great help.

The Douglas mixture is useful at such time. It is cheap, cleansing, purifying to the blood and effective.

It is made thus:

Dissolve one pound coperas in one gallon of water and add two ounces sulphuric acid. For chicks use one tablespoonful to one-half pail of water.

Poultry Hints

The following I know to be valuable from our own experience. It beats spraying the chicken houses. Take a bunch of hay or other material that will serve the same purpose. Sprinkle in it, say a quarter of a pound of sulphur and set it afire in the middle of the house on a still day. Cover with an old pan or tub to keep the blaze down. Get out of the house and keep the chickens out for an hour or longer, and you are done with trouble from mites or lice for a month or two. Also, after using this smudge you are not likely to have roup or cholera soon. Should cholera appear among the fowls, put a teaspoonful of crude carbolic acid to two gallons of water or milk for drink for the chicks. We never lose but very few. We have four chicken houses, and each house has a covered scratching shed on the south, and keep the fowls in on cold days. We have two hundred hens, all White Wyandottes, and we seldom lose one, and a case of eggs ready for market is a frequent occurence.—⅝. Peffley, Eldorado, Kas.

Times Were Hard for Millers — The Boss Couldn't Give Johnson a Ten-cent Raise in Wages

—So Johnson Started to Make Incubators

"One day I told the boss if he could stand a ten-cent raise, I could. . . But times were hard for millers, and I had no sooner asked for the raise than I was ashamed for approaching him. . . Along towards morning I woke my wife up. Says I, 'Do you remember how quickly they gobbled up our incubators when we left Sheridan, Missouri, for Oronogo, and how the same thing happened when we left Oronogo for Clay Center?' They were good incubators, and after the people made sure of that fact they wanted them. I feel sure that had the ten cents advance been granted I would be an engineer now."

It is all told about, in the "Ups and Downs of an Inventor", the most interesting, most entertaining and most cherished bit of history every written about incubators and poultry. It is Johnson's own story of his experiences—a story that will encourage you, will make you a better poultry raiser. The "Ups and Downs of an Inventor" is only a *part* of Johnson's Old Trusty Book. The rest of the book is just as interesting. It is home-written, home made and home printed. It is plain and practical—contains the facts learned in the past 17 years, during which time Johnson has made and sold over 400,000 incubators and received more than a million letters from his customers. It tells why

Still Less Than $10 for 1913 Freight Paid East of Rockies or allowed that far if you live beyond

Comes All Ready Set Up Ready To Hatch

Prompt Shipment Guaranteed Orders Shipped Same Day Received

The large volume of sales makes it possible for Johnson to take less than 7 per cent profit. All told about in Johnson's Book. Read how Johnson landed in Clay Center with 65c in his pocket. Went to work in a mill for $1.50 per day. Made incubators in spare time in boiler room. Smashed a lot of old ideas by practical, sensible demonstrations. Soon made artificial hatching popular and easy for everybody. Kept quality up and price down always.

Johnson's Book tells how to save money and prevent trouble. It tells how to make a success right from the start without experimenting. It is plain and honest throughout. Shows hundreds of actual photographs sent in by owners of Old Trusty incubators—gives their names and addresses so you can write to them. Contains no guesses or theories. Every page is a sane, sensible sermon that will make you a better poultry raiser. Why not

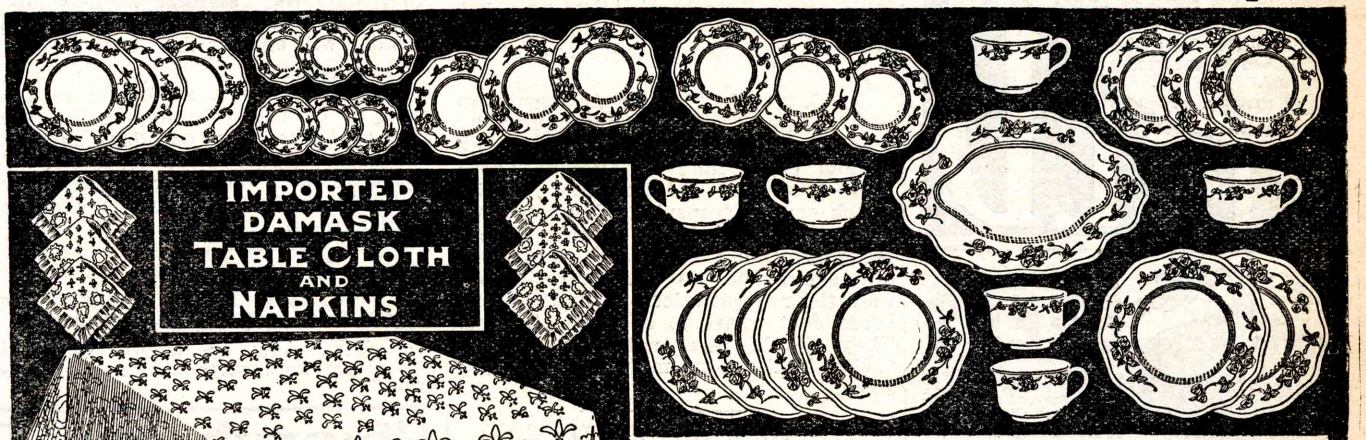
Send for Johnson's Book —right now—before you forget? Read the reasons why over 400,000 people have bought Johnson's incubator and why they have all made money with it. Read how the Old Trusty is made and why it is made that way. Read how Johnson offers you 30 to 90 days' free trial, 10 year guarantee, and 20 year guarantee if you want it. Get Johnson's price—it's less than $10—all freight prepaid east of Rockies—that far if you live beyond. Send now for Johnson's Book—free. Address

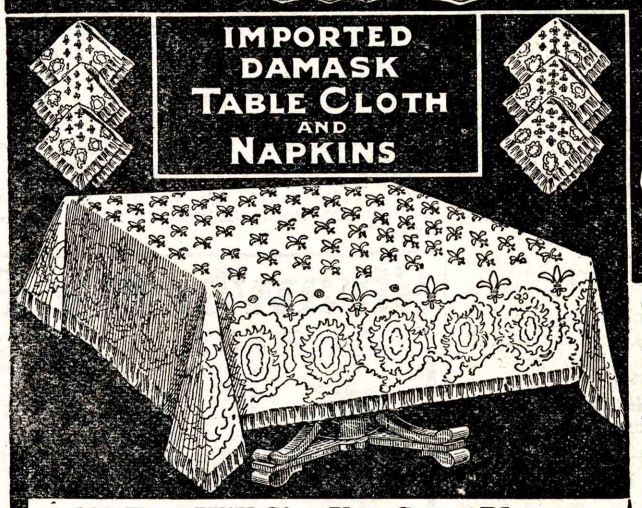
JOHNSON—Incubator Man, Dept. U, Clay Center, Neb.

A Few Facts About Construction

Case, clear California redwood, not a split, crack or knot in a thousand feet of it. Covered with first grade asbestos and handsome sheet metal to make it fireproof, heat proof, moisture proof. Patented heating system that discharges heated water at opposite end of lamp—every part of egg chamber gets same temperature. Tank made of pure, heavy copper, tested 30 pounds to square inch. Regulator without levers, or other "do-dads" to bind and spoil the hatch. Edward Miller sun hinge burner, guaranteed thermometer—best made. Every part of the Old Trusty is made as "Honest Abe" Lincoln would make it if he were my partner in business. Write for my book—it's free.

FREE to You! "AMERICAN BEAUTY" Dinner Set White Damask Table Cloth and Napkins





A Gift That Will Give You Great Pleasure

We make this **Free Offer Complete** by paying all the freight or express charges to your home and guarantee to replace any breakage free of all charge to you. **WE COULD NOT DO MORE.**

WHAT OTHERS SAY

"GENTLEMEN:—I have received the beautiful dishes and am well pleased with them and the way you treated me. I am well paid for what little I did for you. Respectfully, MRS. JENNIE TOWNSEND. Brownstown, Ill.

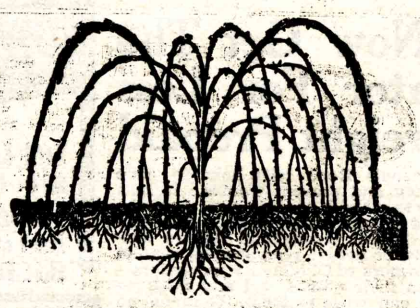
HORTICULTURE

CARING FOR RASPBERRY BUSH

THE red raspberry should not be summer pruned, excepting that the old canes should be cut out at once after the fruit has all been picked. In the spring the weak shoots should be removed, and not more than eight canes be allowed to a plant. The best berries will be found on one-year wood, and they should not be allowed to fruit more than three years. This may be managed by using method in



The Raspberry.

pruning, so that each year there will be no canes more than four years old.

The red raspberry is propagated by shoots which grow up from the roots. One-year-old shoots are preferable for planting. The rows should be at least three feet apart, with the plants two feet apart in the row. Frequent and thorough cultivation is necessary to keep down the suckers which grow from the roots. It is a good plan to plow the ground between the rows every spring.

The blackcap requires summer pruning. The tips should be pinched off as soon as the shoots get to be two feet high, in order to induce side-branching. If these side-branches grow to long, pinch them back. Allow no canes higher than six feet. In the spring reprune, cutting out weak and excessive growth.

Black raspberries do not send up root shoots. They are propagated by burying the tips of the shoots in the ground some time in August. These take root and produce new plants, which can be transplanted the following spring. The black raspberries are more rank in their habits of growth and should be planted further apart than the red varieties. Planting every three feet apart is a good distance. They should receive thorough cultivation in the same manner as the red sorts.

BEES AND FRUIT

Bees and fruit go well together. The bees gather from the blossoms and in return fertilize them. The hum of these industrious workers in the orchard foretells rich harvests. Under the tree is a good place for the hives.

They All Do

First Congressman—It is best to think before you speak.

Second Congressman—Yes, I never speak until I think how I'll get out of it if it don't seem to be popular.

A Fair Average

Brother—Where did you get that cake?

Sister—Mother gave it to me.

Brother—She always gives you more than she does me.

Sister—Never mind. She's going to put plasters on us tonight, and I'll ask her to put the biggest one on you.

PRETTY FLOWERS IN GARDEN

SWEET pea vines must have good support. Brush branches suit them better than anything else, but these are not always easy to get. A good substitute for brush is very coarse meshed wire netting.

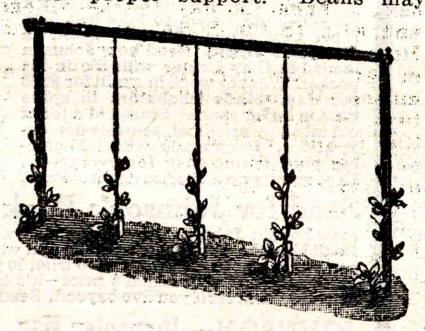
As soon as the plants begin to bloom begin to cut from them. The more blossoms you cut off the more you will have. If care is taken to remove the blossoms as soon as they begin to fade, the plants will continue to bloom until frost comes; but if seed is allowed to ripen, you will have but few flowers during the latter part of the season.

In cutting sweet peas give the flowers as long stems as possible. Never crowd them in vase or bowl. Just bunch them loosely in the hand, and then drop them into whatever is to hold them, give it a shape, and lo, your flowers will have arranged themselves to perfection.

No garden should be without some sweet pea vines. The great beauty and fragrance of the blossoms make them one of the most popular flowers.

GOOD SUBSTITUTE FOR POLES

IT IS every year becoming more difficult to obtain poles for beans and plants of that kind and very often a crop is greatly reduced because of lack of proper support. Beans may



Substitute for Poles.

be supported without poles in this manner: Stakes, from which wires or strings run, should be driven in the ground very early, so the roots of the plants will not be disturbed. The beans should be at least eighteen inches apart in the row and the rows should be three feet apart.

Wire, of course, makes the best support, but very strong, hard-twisted twine that will not stretch in the damp weather will answer the purpose.

The supporting posts may be set at any distance apart, according to the strength of the pole supporting the wire or twine. An excellent support is a gas pipe, but, of course, this is too expensive for a large garden, but may be used to advantage in the average small garden.

Not Lost

"Please help me recover my child," said the sad faced mother to the policeman.

"Is your child lost?" asked the officer.

"No, sir," said the mother. "but his clothes are worn out and he needs recovering."

Great Crops of Strawberries and How to Grow Them

FREE BOOK

IS a beautifully illustrated book of expert information written by America's most successful strawberry grower. It gives the famous Kellogg sure-crop method and explains just how Pedigree Plants are grown on the great Kellogg plant farms in Michigan, Oregon and Idaho. Any man, woman, boy or girl, who reads this book can grow big crops and get big prices. Strawberries yield more dollars per acre than any other crop. Our book tells the whole story. It's FREE to you.

R. M. Kellogg Co. Box 285, Three Rivers, Mich.

Wonderful Fall-Bearing Strawberries

Fruit in fall of first year and in spring and fall of second year. Big money-maker! 500 plants set in May yielded from Aug. 23 to Nov. 11 nearly 400 quarts which sold for 25c per qt. The past season (1912) we had fresh strawberries every day from June 15 to Nov. 15! We are *headquarters* for

Strawberries and Small Fruit Plants of all kinds

Address, RATEKIN'S SEED HOUSE, Shenandoah, Iowa. Box 34

A Jolly Farmer

I used to be a dumper,
And hurried off my crop,
And when I raised a bumper,
The price was sure to drop.
But now I know 'tis folly
To rush through the market gate,
And I am feeling jolly
'Cause I've learned from UP-TO-DATE.

THE GOVERNOR IN THE HOME

"Speak gently. It is better far
To rule by love than fear;
Speak gently. Let no harsh words mar
The good we might do here."

WHO is the governor in the home? There must be a ruling power in all well ordered establishments, not excepting the home,—but in the latter there should be no arbitrary rule, no mock dignity, no superciliousness, no tyranny. The home establishment is a partnership. The capital invested is the hope of a happy and successful life with all that such a life may bring. Hence the partners have an equal investment of capital. We may admit for custom's sake that the man is the head of the firm, but why is he? What inherent superiority or greatness made him so? But yielding to custom, the head may direct the body, but it does not domineer over it.

The happy home is the one that is ruled by kindness, mutual concession and love. The husband and wife are one, yet each has an individuality, and that individuality should be respected. There is no room for stubbornness, contrariness, wounded dignity, or mysterious wrongs to brood over. True partners have no secrets from one another, particularly in matters affecting the partnership. Therefore, in the home everything should be frank and confidential. There is no room for a dark closet in which things may be kept hidden. We never like to read of a "skeleton in the closet." Where there is such a thing there is neither love nor happiness, and the capital invested in the partnership is lost. Both men and women err sometimes in the government of the home, because men and women are human beings, and to err is human; but all should remember that "it is better far to rule by love than fear."

THE BOYS IN THE HOME

WHEN we speak of the home life we usually think of the girls, but there are boys in the home, and there are boys who will go out from the home. What will they take with them into the new homes they shall make? What influences will they wield in the great world of which they are to be a part? Are they better than the boys were that went ahead of them? Have they higher ambitions and a well defined desire to assist in making the world better and the people in it happier?

We are always hopeful of the boys, but we are sometimes forced to wonder whether the world is getting worse or better. As the boys are in the home, or out of it it might be better to say, so will be society, the church and the nation. We are sorry so many boys have ways away fro mhome that they would not take with them to their homes. We are sorry, also, that bright and intelligent boys sometimes do things that impair their manhood, weaken their resolutions for good, depress their intellectual powers and pull them down when everything ought to be for the lift up. Oh, the cigarette! That is the bane of the young manhood of today; and whatever pulls the young man down impairs the civilization and honor of the future race. There is profit to the makers in the baneful cigarette, and for the sake of that profit they would pull the whole human race to a lower level, when every aspiring man or woman ought to be looking to and working for a higher. In the cities there is nothing advertised more gaudily than the cigarette, and the city youth is woefully addicted to its use. And sad to say, it finds its way to the villages and even to the homes on the farm. How foolish would the horse or cow, or even the hog, be thought that, among all the good things of its pasture, it would hunt out the weeds that it knew would weaken its powers and destroy its usefulness. The boy or man that uses cigarettes, or even the cigar, the pipe or the chew, must know there is nothing in any of these than can make them better—that they tend downward rather than upward. The first named, because of elements put in it to create a desire for it and perpetuate and multiply its use, is positively ruinous to the moral, intellectual and physical system. Yet it is used.

We won't give up our hope in young men, especially the boys on the farm, but those who would rise and make themselves famous, assist in the work of making the country greater and the race nobler, must avoid the evils that everywhere await them on what ought to be life's brightest part.

Thoughts for the Home

Keep your face to the sunshine, and the shadow will always be behind you.

It is said that a pinch of salt added to the coal oil in lamps will result in a brighter and evener light.

To take the stain from table knives rub them with a piece of potato dipped in brick dust.

A little salt added to bluing water will keep clothes-pins from sticking fast to the clothes in freezing weather.

A Utah woman figured that she traveled 125 miles a year in her kitchen, which was arranged as most kitchens are; but she had it remodeled and everything placed more convenient, and thus reduced the travel to fifty-seven miles. There is a hint in this for every kitchen queen.

A sweet and kindly disposition is contagious. There are kindness germs as well as disease germs. People can't help being kind to those who are kind to them; except that possibly there may be a few that are immune.

"The noblest thoughts and deeds of men are not recorded by the pen." Nor of women either.

An ounce of systematic work is worth pounds of doing things just as it happens.

Don't take up silly quarrels that lead to hard feelings among families. We only live once in this world, and life is too short and should be too sweet to lose one hour in bitterness.

Pin handkerchiefs and collars and other small things to sheets or larger garments before hanging out in cold weather, and thus save aching fingers.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

"Motherhood"

THIS BEAUTIFUL ART PANEL PRINTED IN 14 EXQUISITE COLORS AND GOLD, MEASURING 3 FEET LONG AND 7½ INCHES WIDE WILL BE SENT YOU MERELY FOR COST OF WRAPPING AND MAILING.

¶ "Motherhood" is easily the most popular painting of the year. More than 100,000 copies of this work of Art have been sent out during the past two months.

¶ Words cannot begin to do justice to its remarkable beauty and the illustration shown here, printed in black and white and greatly reduced in size, conveys but faintly the impression of loveliness and daintiness with which the beholder of the painting itself is always charmed. There is no advertising on front to prevent framing. Calendar for 1913 is printed on reverse side.

Send 10 Cents Coin or Stamps

Just send 10 cents in coin or stamps for this beautiful Art Panel. You will not be bothered with a lot of circular matter or be asked to subscribe for anything. You send the 10 cents and we send the Art Panel. That is all there is to it. If you want a sample copy of The Farmers' Review, The Greatest Weekly Farm Paper in the middle west, just say so and we will be pleased to comply with your request. Address

WET FEET AND CLOTHING

NO MATTER how careful persons may be, they will sometimes get their feet wet by water or dew going through or over their shoes. The duties of life on the farm sometimes make this unavoidable, but it is something that should never be neglected. Dry and warm the feet as soon as possible. Never dismiss the matter with the excuse that the feet are "not much wet." Dampness is too much. This as particularly true of women, and many a consumptive's grave has been dug as the result of this neglect—it seemed such a little thing. And the same may be said of wet or damp clothes. When a person is out in the rain or snow, or a storm of any kind, the movement is sure to be quick. This induces a rapid circulation of the blood which slows down when the person stops. This makes an ideal condition for taking cold. If possible remove the damp clothing and see that everything is warm and dry.

Herein is one of the dangers of the country schools. Unavoidably children sometimes get their feet or clothing wet on their way to school. At the school house there is no chance for a change, and they may sit the day through, possibly in a damp and not very warm room, with no chance to dry their clothes except as the natural heat of their bodies may dry them. What a terrible bid for pneumonia, and even consumption itself. Many elderly people have died of consumption whose cause and origin could be traced to this very condition in early life.

Maple Taffy.—To two cups of maple sirup add a cup of cocoanut milk. Cook until it hardens in water, then pull when cool enough.

Now is the Time

Don't put off a bit of work,
Do it now.
It doesn't pay to shirk,
Do it now.
If you want to fill a place
And be useful in the race
Just get up and take a brace,
Do it now.

Do not linger by the way,
Do it now.
You will lose if you delay,
Do it now.
If the other fellows wait,
Or postpone until it's late,
You hit up a faster gait—
Do it now.

—Selected.

It is not being exposed to fresh air that induces pneumonia and colds, but rather being shut up in overheated, stuffy houses and schoolrooms where the air is foul. From 68 to 70 degrees F. is the proper temperature for the home and schoolroom, and if there is any variation from these points it should be less rather than more. The keeping of a temperature of 80 degrees is not only wanton extravagance from the standpoint of fuel expense, but a positive menace to the health.

Cut Down Upkeep

By R. E. Olds, Designer

I have built cars for 26 years—60,000 of them.

But of all I have learned, nothing else compares with these ways for cutting upkeep—shown in Reo the Fifth.

The Final Cost

The buyer sees just the car's first price. But the vital thing is the after cost.

That may be little or it may be much. It depends on the builder largely. And the difference to you, in the course of five years, may be $1,000.

How I Reduce It

One big item is tires.

In Reo the Fifth I cut this cost by using tires 34x4. They cost $60 per set more than tires often used on a car of this weight. But they save many times that in tire bills.

I use in this car 15 roller bearings—11 Timken, 4 Hyatt. They cost five times as much as common ball bearings. But they do not break.

I use 190 drop forgings, at twice the cost of steel castings. But drop forgings don't have flaws.

Margin of Safety

Axles and driving parts should show very large over-capacity. I build them all to stand the tests for a 45 h. p. car. That leaves enormous margin.

I have all steel made to formula. Then I analyze each lot twice.

For testing my gears I use a crushing machine of 50 tons' capacity.

I use 7-leaf springs, two inches wide. And I test them for 100,000 vibrations.

Each engine is tested for 48 hours—20 hours on blocks, 28 hours in the chassis. I employ unusual tests.

Each car in the making gets over 1,000 separate tests and inspections.

Costly Items

I use a $75 magneto to save ignition troubles. I doubly heat my carburetor, for low-grade gasoline. I use a centrifugal pump, not a syphon. That adds about $10.

I use 14-inch brake drums.

I give each body 17 coats, so the finish will endure. I use the best genuine leather in upholstering. Also the best curled hair.

I am using flush electric dash lights in place of the old-style lamps.

All these things are costly. Yet I supply them, through factory economy, in a wonderfully low-priced car.

A car without them is likely to cost five times as much for upkeep. There may be costly repairs, and frequent.

I never would buy a lesser car. Therefore, I never shall build one.

Our $100 Control

Here is one feature worth $100 which costs not an extra penny.

It's the Reo center control. All the gear shifting is done by moving one little handle only three inches in each of four directions. It is as simple as moving the spark lever.

The driver sits on the left hand side, as in the latest high-priced cars. And this control lever is at his right hand.

Both brakes are operated by foot pedals. There are no brake levers, so both front doors are clear.

A car in these days should have these modern features.

Sold by 1,000 dealers. Write for our 1913 catalog and we'll tell you the nearest show-room.

A Fashion Talk

(See Illustrations on Opposite Page)

THE new spring costumes show a tendency toward simple effects and the one-piece frock that fastens at the front is one of the favorite styles of the moment.

Often these one-piece dresses have dainty collar and cuffs of silk or satin usually of a contrasting shade. Often there is a further ornamentation of fancy buttons of gilt, of glass or bone and sometimes the buttonholes are worked with colored silk contrasting to the color of the material of which the frock is fashioned.

Among the drawings shown we have an attractive frock that the home dressmaker can carry out without the least difficulty and that represents one of the newest of the spring styles. This is model 6007. In the drawing we have this pretty frock developed in white serge with blue and white striped silk collar and cuffs. Three blue bone buttons fasten the waist and add to the embellishment.

This is a simple garment but a very rich-looking one. Other available fabrics for its development include cashmere, serge, mohair and silk of any wanted color. For early summer the costume may be made of linen or pique or of any of the pretty and popular tub fabrics.

A pretty garment for the young girl is offered in model No. 5978. Here again we have the front fastening and the slender lines that go so far in the making of grace and youthfulness. The new style Robespierre collar is noted, this being made of contrasting goods. The sleeves are long and plain or they may be finished with a frill of lace.

Brown and white striped silk was used to develop the model with white satin for the collar. For business wear this dress may be of serge of corduroy with colored glass buttons if a fancy touch is desired.

The woman planning a new coat suit will be interested in the novel and stylish jacket offered in design No. 5946. This coat is delightful for early spring service and combined with a pretty skirt of the same fabric develops a splendid suit that has charm and yet an element of practibility.

The standing collar and the wide lapels as well as the turned-back cuffs are of moire though satin or silk may be used for this purpose.

Two buttons effect the fastening and the front is cutaway in rounded outline.

For wear with separate skirts or as part of a complete costume the charming waist shown in No. 5928 is equally appropriate. This waist may be made of satin, silk, or voile with the pretty collar of all-over, brocaded satin or plain silk. The front is draped in delightful fashion, the sash ends being a chic finish. These correspond with the collar and the rolled-back cuffs that finish the short sleeves.

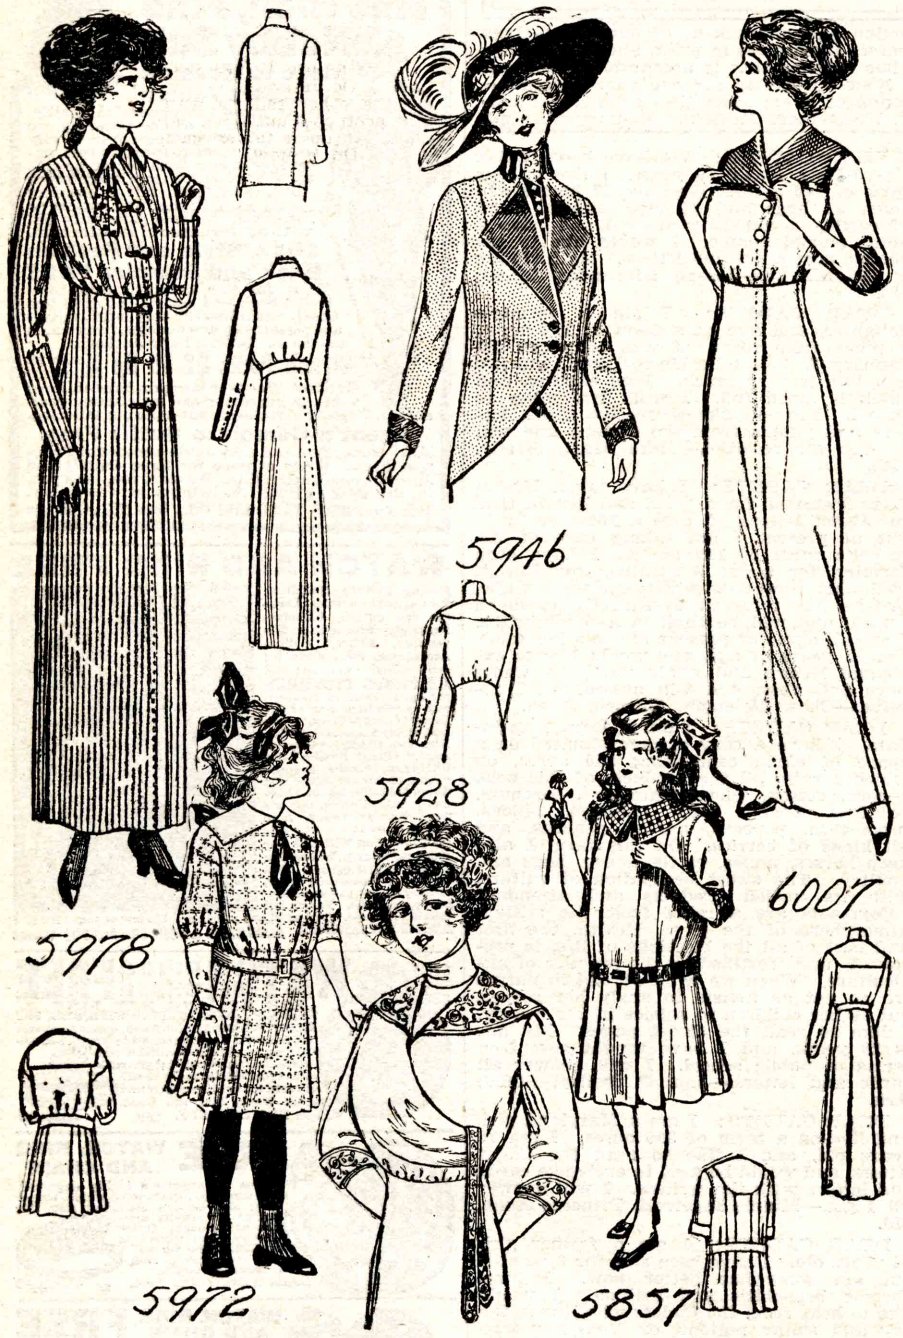
For the little girl two attractive designs are given. Model No. 5972 is a dress of plaid gingham, in blue and yellow, with plain blue sailor collar, band cuffs and belt. If preferred, the belt may be of blue, white or black patent leather. The frock closes at the left side and covered buttons or those of pretty pearl or bone may be used. The little skirt is becoming plaited with a box plait front and back.

The other dress, model No. 5857, is of blue chambray with plaid gingham collar and cuffs. This frock is box plaited front and back and is held in place with a patent leather belt. The frock and back and hrdl leather belt. The frock may be made for dressy service if fashioned of pale blue cashmere, red serge, or white mohair with silk collar and cuffs.

All the above designs are very simple to follow, and each one is the newest idea of its type.

What is Now the Fashion

Up-to-Date Patterns



All Patterns 10 cents each, post paid

Free Monthly Fashion Guide

We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

5978—Misses' Dress. This dress can be used for the small woman as well as for the miss. It can be made with either the empire or regulation waistline. The skirt is a four-gored model.

Serge, cheviot, or linen can be used to make this dress with the collar of contrasting goods.

The pattern 5978 is cut in sizes 14, 16 and 18 years. Medium size requires 4½ yards of 44-inch material with ½ yard of 27-inch contrasting goods.

5946—Ladies' Coat. This is the new fashionable coat model made in the stylish 32½-inch length, with a straight or cutaway fronts, with or without vest and with two styles of collars. The regular coating fabrics may be employed and a nice idea is to make the collar and revers of moire or brocade satin.

The pattern 5946 is cut in sizes 32 to 42 inches bust measure. Medium size requires 2¾ yards of 54-inch material.

6007—Ladies' Dress. This dress is made with the stylish sailor collar and turn back cuffs. It closes at the front and is made with a removable chemisette. It can also be made with long or short sleeves. The skirt is a five-gored model.

The pattern 6007 is cut in sizes 32 to 42 inches bust measure. Medium size requires 6⅛ yards of 36-inch material with ⅝ yard of 36-inch contrasting goods.

5972—Girl's Dress. This attractive frock may be made with long or short sleeves and with plaited or gathered skirt. It closes at the front and is quite a simple model to carry out. The sailor collar is a nice feature and this may be made of self-material or of contrasting goods as preferred. The garment is very pretty developed in cream serge, navy blue, mohair or plain or striped serge.

The pattern, 5972 is cut in sizes 6 to 12 years. Medium size will require 3¼ yards of 36-inch material and ⅜ yard of 27-inch contrasting goods.

5928—Ladies' Waist. Here is a delightful waist model that may be developed for separate wear or as part of a complete costume. The garment may be made with empire or regulation waistline and with long or short sleeves. The draped effect at the front is quite stylish. The big collar and the turned back cuffs are fashioned of allover.

The pattern 5928 is cut in sizes 32 to 42 inches bust measure. Medium size requires 3⅛ yards of 36-inch material and 3¾ yards of 22-inch allover.

Any little girl would look charming in this attractive frock which is simplicity itself in construction. It is plainted in pleasing fashion and held in position by a belt. The neck is finished with a neat turn down collar and the sleeves have chic rolled back cuffs.

Any of the wash materials can be used to make this dress.

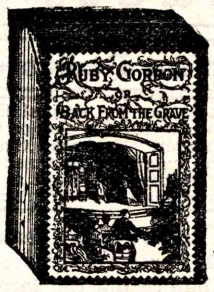
The pattern 5857 is cut in sizes 6 to 12 years. Medium size requires 3 yards of 36-inch material and ⅜ yard of 27-inch contrasting goods.

These patterns are guaranteed; there are none better at any price. **Full directions accompany each.** All you have to do is to give number and the size you want and **write your name** and address plainly. Address Pattern Desk.

UP-TO-DATE FARMING, Indianapolis, Ind.

"RUBY GORDON Or Back From The Grave" FREE

By Libbie Sprague Phillips.



Here is a thrilling story of love, mystery and adventure that will grip your attention from the first word to the last! It is one of the greatest novels this famous writer has ever produced. Ruby Gordon, a poor orphan girl, becomes engaged to one of the young men in the town, who is the adopted son of a wealthy recluse. The old gentleman took a great dislike to Ruby Gordon because she reminded him of his wife who had left him years before and had been lost at sea in crossing the ocean; he felt that she was his wife's spirit reincarnated, and forbade Lawrence, his adopted son, to marry her, and made so much trouble that the young man finally broke his engagement and married another, but it is not their fate to so easily evade Ruby Gordon, as you will discover when you get your free copy of this great book and read the story yourself! Ruby Gordon will surely find a warm place in your heart—she is one of those sweet pure characters every reader admires. We purchased a large edition and will send the book free and postpaid to all who send 10c to pay for a 3 months' subscription to our big farm and home magazine. Send today. Address

Valley Farmer, Book Dept. RG-15, Topeka, Kan.

NEW SPRING AND SUMMER FASHION BOOK FREE

Our New Spring and Summer Fashion Book, "Every Woman Her Own Dressmaker," shows 175 latest fashions; also gives full directions for cutting, fitting and making them at home. This book usually sells for 25 cents, but we give it FREE to customers of our pattern department who send 4 cents to cover cost of packing and mailing. Address

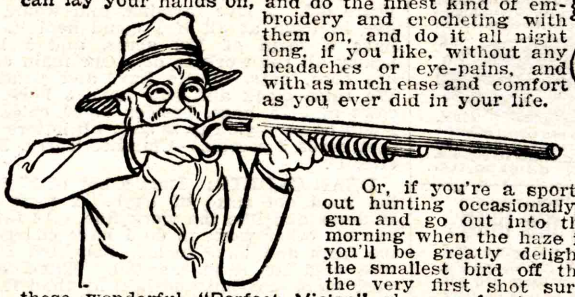
Glasses Absolutely Free

Don't Send Me One Cent

when you answer this announcement, as I am going to mail you a brand new pair of my wonderful "Perfect Vision" glasses (known in the spectacle business as "lenses") absolutely free of charge as an advertisement.

As soon as you get them I want you to put them on your eyes, sit down in front of the open hearth one of these cold wintry nights, and you'll be agreeably surprised to discover that you can again read the very finest print in your bible with them on even by the dim firelight; you'll find that you can again thread the smallest-eyed needle you can lay your hands on, and do the finest kind of embroidery and crocheting with them on, and do it all night long, if you like, without any headaches or eye-pains, and with as much ease and comfort as you ever did in your life.



Or, if you're a sportsman and like to go out hunting occasionally, just shoulder your gun and go out into the woods some early morning when the haze is yet in the air, and you'll be greatly delighted when you drop the smallest bird off the tallest tree-top at the very first shot sure, with the help of these wonderful "Perfect Vision" glasses of mine. And in the evening, when the shadows are gathering in the twilight, you'll easily distinguish a horse from a cow out in the pasture at the greatest distance and as far as your eye can reach with them on—and this even if your eyes are so very weak now that you cannot even read the largest headlines in this paper.

Now Don't Take My Word For It

but send for a pair at once and try them out yourself for reading, sewing, hunting, driving, indoors, outdoors, anywhere and everywhere, anyway and everyway. Then after a thorough tryout, if you find that every word I have said about them is as honest and as true as gospel, and if they really have restored to you the absolute perfect eyesight of your early youth, you can keep them forever without one cent of pay, and

Just Do Me A Good Turn

by showing them around to your friends and neighbors, and speak a good word for them whenever you have the chance. Won't you help me introduce my wonderful "Perfect Vision" glasses in your locality on this easy, simple condition?

If you are a genuine, bona-fide spectacle-wearer (no children need apply) and want to do me this favor, write your name, address and age on the below four-dollar coupon at once, and this will entitle you to a pair of my famous "Perfect Vision" glasses absolutely free of charge as an advertisement.

Write your name, address and age on the below coupon at once.

$4 $4

DR. HAUX—The Spectacle Man—ST. LOUIS, MO.
I herewith enclose this four-dollar coupon, which you agreed in the above advertisement to accept in full and complete payment of a brand new pair of your famous "Perfect Vision" glasses, and I am certainly going to make you stick to that contract.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE Cadets are certainly making a 1913 record. There now lies before me the largest pile of letters that have ever come between issues of UP-TO-DATE FARMING. The writers are all enrolled as Cadets of Equity, but we can only print comparatively few of these excellent letters. That verdant youth of Wheeling, Ind., who has such a wonderful memory, says pathetically, "That fool letter I wrote struck all the boys and girls in a funny streak, and I think every Cadet in existence has written me." He has had two hundred letters and more than five hundred cards, and every train brings more. He wants to thank all the writers, but says he just can not answer them all, as it would take all his time the balance of his days. UP-TO-DATE and the Cadets do things.

DEAR CADETS: I have read all your letters and take great interest in them. I certainly consider it a great privilege to become acquainted with girls and boys in the different states. Though not until now a Cadet, I have long taken an interest in the letters. I am a farmer's daughter of 19 years, and live on a farm of "thirty-one hundred acres." I would be highly elated to receive letters and cards from some of the Cadet boys and girls; will answer all I receive.—Namie Duvall, Midway, Ky.

DEAR CADETS: I have been reading your letters with great interest for a long time. I am 16, and live on a farm of 718 acres, 90 of which are in cultivation. We raise mostly cotton and oats. Land sells at from $20 to $100 an acre. I am a member of the Catholic church of Harper. I think UP-TO-DATE is the best paper a farmer can read; I read every line of it. I would be glad to receive photos or letters from the Cadet girls and boys, and will be glad to answer every one.—Walter Lang, Harper, Tex.

DEAR CADETS: I am a farmer 26 years old. I love farming, and would not live in town at all if I could hepl it. We have a farm of 120 acres, and I have nearly all the work to do. Our main crops are corn, oats, alfalfa hay, and potatoes. We raise stock and now have 3 horses, 3 cows and 75 hogs, besides 1,500 chickens. I will be very glad to answer all letters and post cards I receive.—Clarence Terry, Fayette, O.

DEAR CADETS: I am a boy of 17 from the good old state of Utah. I farm our 80 acres and like the work fine. As father has his other work to do I have charge of the farm and have to hire help, but I get well paid for it in the fall. There is no work more pleasant and healthy than farming. I have taken UP-TO-DATE only a short time, but I enjoy it very much. It is sure a great help to any farmer. The Cadet page cannot be beaten. I live 7 miles from Salt Lake City. I hope to hear from the Cadet boys and girls, and promise to answer all cards or letters.—Heber Aamodt, 117 East Sixteenth St., Murray, Utah.

DEAR CADETS: I am a girl of 22, and had always lived in Indianapolis until four years ago, when we moved to our farm. We are subscribers for UP-TO-DATE FARMING. The land through here is very valuable, and our farm is mostly black ground. Corn is the chief grain, and hogs are raised extensively. I should like to hear from Cadets of different states.—L. Browne, Clayton, Ind.

DEAR CADETS: I am not a farmer boy, but I think farm life is best for us young folks. My brother takes UP-TO-DATE and I think it is the best farm paper I ever read. I am living on my brother's homestead with my father. I came up here from Salem, Ore., and am an American boy 18 years old. The mail comes out here once a week. Hoping to hear from some of the Cadets.—Joe Calhoun, Minnehik, Alta, Canada.

DEAR CADETS: Here comes a girl from California, the land of the golden west. I have been a reader of UP-TO-DATE FARMING for almost a year, and I think it is a fine paper. I would like to exchange postals with the Cadet boys and girls.—E. McCall, Placerville, Cal.

DEAR CADETS: I am an interested reader of UP-TO-DATE, especially of your page. I see letters in these columns from far away—practically from everywhere. I like the first page pictures, and think they are exceedingly instructive and admonitive to every true farmer. Surely the teachings of this paper should be heeded. I am a farmer, past 25 years of age, and live 3 miles from Hillsboro. I go to church and Sunday school almost every Sunday. I will try to answer all cards and letters I may receive.—Walter Bever, Hillsboro, Ind.

DEAR CADETS: We have been taking UP-TO-DATE about 16 years. I live on our farm of 240 acres. We have 27 horses and colts, 51 hogs and 25 pigs, and 25 head of cattle. I am 12 years old and have a horse named Jumbo. I would like to exchange post cards and letters. My birthday is October 20.—Joseph Alexander, Milan, Mo.

DEAR CADETS: I am a farmer's daughter, and live on a farm of 112 acres, 5 miles from town. I was 15 years old January 1. We take UP-TO-DATE FARMING and like it very much. I go skating, and think it much fun. I walk two miles to school. I would like to receive cards, letters and photos from the Cadets, and will answer all received.—Ruth Hart, Brady, Neb.

DEAR CADETS: I have taken UP-TO-DATE FARMING for a year, and like to read the Cadet letters. I own a 160-acre farm, but at present I am taking care of my father's farm of 119 acres. I have been farming for about 8 months, and like it well. My brother was with me for a while, but he has returned to the city to finish school, and will be back in a few months. I am all alone at present and it's lonesome. I'm 22 years of age, and would like to exchange letters and cards with the Cadet boys and girls, and will answer all I receive.—Chas. Peterson, Branch, Mich.

DEAR CADETS: I am a farmer up-to-date. I have a cozy cottage situated on a space of earth comprising 250 acres, on which I raise all the products of this zone—corn, cotton, wheat, oats, rye, sorghum, potatoes, beans, peas, cabbage, onions, broomcorn, popcorn, apples, peaches, and all kinds of berries. On this farm I also keep horses, mules, cattle, sheep, hogs and poultry. The sweet occupation of culture, with its varied products and attendant enjoyments are a relief from the stifling atmosphere of the city. Health, the first and best of all the blessings of life, is preserved and fortified by the practice of agriculture. When we walk abroad in nature we go not as artists to study her scenes, but as her children to rejoice in her beauty. I like to read the Cadet pages. My age is 28 years, and I have taught seventeen terms of public school. I will answer all cards and letters.—Jno. F. Pinley, Stella, Ark.

DEAR CADETS: I am a Maryland girl, and live on a farm of 360 acres. I am 16 years old, and I like to read the Cadet letters, and would be glad to exchange cards and letters with the writers. I will answer all I get.—Minnie Ingersoll, Princess Anne, Md.

DEAR CADETS: I am a farmer girl, 22 years old. I have been sick for 3 months but am somewhat better now. I have chronic bronchitis and asthma. I would like to hear from the Cadets who live in the dry and sunny regions, or from any who have gone there for their health.—Orpha McLaughlin, Lewis, Ind.

DEAR CADETS: I have been reading UP-TO-DATE for nearly a year, and like the paper fine. I specially enjoy the Cadet letters. I think it is a fine idea to get the young people to write to one another from all over America. I live just about as far west as one can get in the good old United States. This little paper seems to find its way to nearly every place. I am 20 years old and live on an 80-acre farm, right in the heart of the giant redwoods. The soil is very fertile and we raise some fine crops here. I would be glad to hear from the Cadets. If you want me to send you some post cards of the big trees write and I will answer all.—Watkin S. Pollard, Fortuna, Cal.

DEAR CADETS: I am not a farmer's daughter, but I trust that will not debar me from becoming a Cadet of Equity. I assure you I am equal to any country girl when it comes to health, strength and endurance. I am 16 years old and a sophomore in the Mystic high school. My nationality is Swedish, as my name implies, but my appearance contradicts it. I have exceedingly dark hair and eyes. My father is the city mechanic, my brothers are proprietors of the Mystic Electrical Supply Company and Garage, one of my oldest sisters is a school teacher, and the other an illustrator and designer. I don't think the UP-TO-DATE can be excelled as a farm paper. I would like to receive letters and cards from both boys and girls.—Signa Quist, Mystic, Iowa.

DEAR CADETS: I am a subscriber for UP-TO-DATE and like its views on the farmers' rights. I am a farmer's daughter, and I am glad to say I like that kind of life, though I do not think we should be so tied up in the affairs of the farm as to forget or neglect our duties to the churches and schools.

Life on the farm isn't all fun,
With washing and scrubbing and errands to Run;
With milking and dusting and cooking to do,
And so much work that you never get through.

WILLARD WATCH CO., Dept. 237 CHICAGO

There's planting and hoeing and flowers to tend,
And sweeping and sewing and clothes to mend;
And lessons of patience we all must learn,
If we pound for hours with an old dash churn.

But farm life is pleasant, for every one knows
There are joys and blessings as sweet as the rose;
For so it is all over the land,
Work and play must go hand in hand.

I would appreciate a card shower February 14. Don't send leather cards. I will endeavor to answer all others.—Nellie G. Anderson, Blaides, Pa.

DEAR CADETS: Will you let a little brown-eyed girl of 17 join you? We take UP-TO-DATE FARMING and I like to read it very much, especially the Cadet letters. My father is president of the Farmers Society of Equity in our neighborhood. We live on a farm of 160 acres in the northwestern part of Oregon, and raise hay, grain, potatoes and fruit. I would like to exchange letters or postals with the Cadet girls and boys, and will answer all I receive.—Madge Jones, Banks, Ore.

DEAR CADETS: We have taken UP-TO-DATE FRAMING for only a short time, but we think it is a fine paper, and I do so enjoy reading the nice letters from the boys and girls. Our farm is in the central part of New York state, and our chief crop is black raspberries, though we raise some wheat, corn, potatoes, and other such things. This is my first year in high school. I like to go very much, but have been out for a month because I have been sick. I don't see many letters from New York. Boys and girls, why don't you get busy? I am 15, and would like very much to hear from all the Cadets and will answer all.—Madge Kendall, Dundee, N. Y.

DEAR CADETS: I am 18 years old and live with my parents on an 80-acre farm. I traveled from Missouri to Colorado, a distance the way we went of 1,500 miles, in a covered wagon, and we certainly had a fine trip. We had 3 cows, and we put the cream in the churn before starting in the morning, and by noon we had fresh butter for dinner. The cows helped us out. We could not get over one of the mountains, and had to go down through New Mexico. We saw Indians there, and on some of the high mountains we gathered ripe strawberries by the side of great big snow drifts. You ought to see the hot water springs. They boil up about four feet high. I stepped down and put my hand in the water, but I took it out quick. I like Colorado fine, and would not go back to Missouri for anything. There is very little lightning and thunder here. Our principal crops last year were alfalfa, sugar beets, onions, beans, squashes, apples, peaches, prunes, potatoes, and fruits and vegetables. I am a member of the Baptist church, and go to Sunday school and church nearly every Sunday. I shall send you a new subscriber soon.—Annie May Tilley, Olathe, Colo.

DEAR CADETS: I am a rancher, and would like to become a Cadet of Equity. I am 24 years of age, and I am staying with friends. I am now helping to build a log stable. We live in a log house that is plastered with mud. I enjoy reading UP-TO-DATE FARMING, and I enjoy the Cadet letters so much that I will be delighted to exchange letters, postals and photos with them.—Chas. B. Ibbotson, Griffith, Colo.

SPECIAL LETTERS

Can't Tell Its Value

I am a farmer, 20 years of age, and am already a Cadet. I have been taking UP-TO-DATE FARMING for three years, and will never be without it. It is the best farm paper I ever saw. I cannot tell how much it has been worth to me. Every farmer in the United States ought to take it. I am going to raise a club and become a Pioneer of Equity. I thank Mr. Everitt for the Cadet department. It is the finest thing in the world for the young people. As a Cadet I have received cards and letters from twenty-six states, and I have answered all but a very few the names to which I could not make out. I will be glad to continue such correspondence.—Horace Richards, Italy, Tex.

How They Used to Do

I want to tell the Cadets something of what life on the farm used to be. We sowed flax, pulled it by hand out of the ground, spread it by hand to "rot," then tied it up and threshed it with a flail, two sticks tied together so that one of them would swing when thrown with an overhanded stroke. Then we "broke" it and scratched it, which cleaned it and left nothing but the lint. Then mother spun it and wove it into coarse linen, from which our summer clothes were made. Our winter clothes were made of the wool taken from the sheep. The boys had to hold the sheep when they were being sheared with the old fashioned shears. The wool was carded into rolls, spun into yarn, and woven into linsey or jeans. Besides all this she did housework for eight or ten youngsters, though the young people helped in those days. A dollar would last longer than two will now. We dug wild ginseng and sold at at six and one-quarter cents a pound, and worked at everything we could get to do at twenty-five to fifty cents a day, even in harvest. The wheat was cut with a scythe and cradle—a little back of my time with a sickle. The hay was cut with a scythe and raked by hand with a home-made wooden rake. The forks were also home-made and of wood, a forked stick nicely worked down and made smooth. We lived fifty-two years in Indiana, and have been twenty-six years in Kansas.—Z. Peffley, Eldorado, Kas.

Note—For poultry hints see the Poultry Department.

First Mormons

I am an agent and a subscriber for UP-TO-DATE FARMING. I am a boy of 55, and live with my aged mother in a little Mormon town. My mother and father and myself, and one other family, were the first Mormons in Norway, and everybody calls me Mormon Charley.—C. A. Anderson, Hyrum, Utah.

Had Done Better

The minister had just returned from his vacation, and asked the sexton how everything had gone since he had been away.

"First rate, sir," replied the sexton. "Most ministers leave some one worse than themselves to preach for them, but you never do, sir."

$5 An Hour Easy

Any Day You Say So

We have agents that easily clean up $5 an hour with our wonderful complete

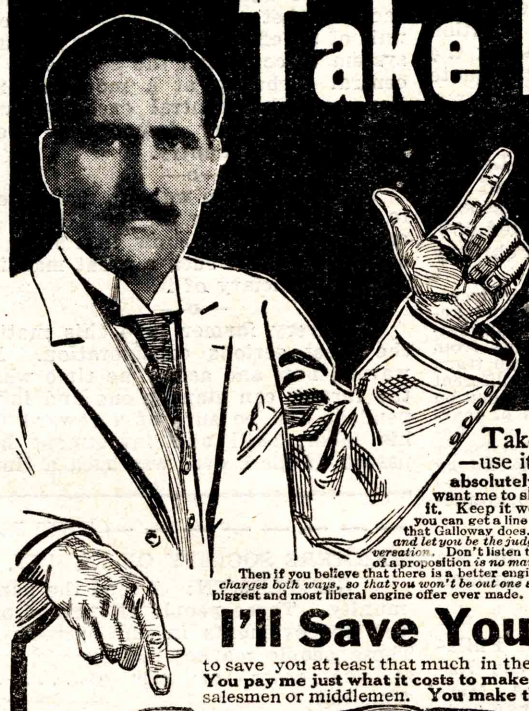
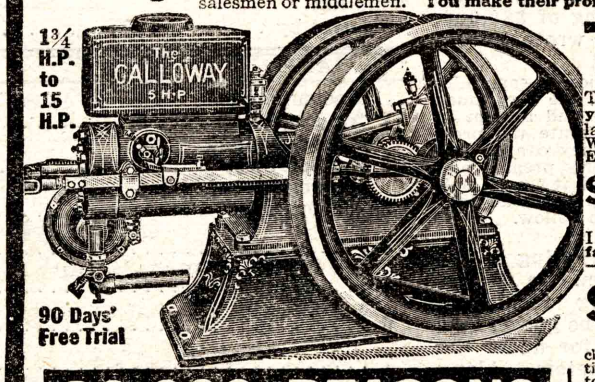
Take My New Engine —Use It 90 Days FREE!



Take one of the wonderful new 1913 Model Galloway Gasoline Engines —use it right on your own farm for one month, two months or three months **absolutely free.** Write at once for my 1913 catalog—pick out the size and style engine you want me to ship you on this free offer—I'll ship it immediately Put it to work on your farm the day you get it. Keep it working every day. Watch it carefully. Compare it with any and every engine on the market that you can get a line on *no matter what the price.* If anybody else is trying to sell you an engine, tell them to make you the same offer that Galloway does. Tell them Galloway is willing to put his engine right side by side on your farm with any other engine in the world *and let you be the judge.* Tell them you don t want any engine salesman trying to influence your judgment--you're buying *engines* not *conversation.* Don't listen to a man who isn't willing to let you judge his engine on its merits. The man who is afraid to meet me on that kind of a proposition *is no man for you to do business with.* Keep my engine a whole month or even two months or three months if you want to. Then if you believe that there is a better engine than the Galloway anywhere in the world at any price, tell me so and I'll take it back and *I'll pay all the freight charges both ways, so that you won't be out one single cent for anything.* If you do decide to keep the Galloway, just tell me so and I'll give you the benefit of the biggest and most liberal engine offer ever made.

I'll Save You $50 to $300 Sure! I'll make you an actual present of $50 to $300. I'll positively guarantee to save you at least that much in the first cost alone. I'll sell you a Galloway direct from my factory where it is made. **You pay me just what it costs to make it** plus one very small profit—**that's all!** There are no jobbers, wholesalers, retailers, salesmen or middlemen. **You make their profits yourself when you buy a Galloway.**



1¾ H.P. to 15 H.P.

90 Days' Free Trial

The Only Way Is the Galloway

That's the way to buy an engine, **and it's the only way that's absolutely fair to you,** and that's the only way that I'll sell an engine, because I won't keep a dollar of any man's money **unless he would rather have my engine than the cash.** When a man will tell me that—**then and not until then do I consider a sale as made.** Every single man who does business with me is absolutely protected by my

$5,000 Challenge—$25,000 Guarantee

I back every promise, every statement and every claim with $5,000 **in cash.** I protect every one of my customers by a $25,000 guarantee of **absolute satisfaction.** Understand, I don't say **reasonable** satisfaction but **ABSOLUTE** satisfaction **—AND YOUR WORD is always good with me.**

Special Service Bureau FREE

My force of high salaried Engine Experts are at your command absolutely without charge. They will tell you how to select exactly the engine which is best suited for your particular purposes; how to test and judge an engine; how to use one to best advantage; how to fit up a power house—besides answering fully and completely any question about the care and operation of an engine. This is absolutely free to you whether you buy a Galloway or not.

20,000 REASONS

Here are a few expressions from farmers now using Galloway Engines. Twenty thousand others have had exactly the same experiences. These are men just like yourself. **Before they bought a Galloway they were in exactly the same position as you are now.** You will say exactly the same as they do after you get your Galloway.

Alex. McLachlan, Argyle, Mich. I received my Galloway Engine last week and it is all right. Everybody says it is a dandy engine. **Some of my neighbors got bit on other engines** by paying $400 for a 9 h. p. and $460 for a 10 h. p. I like your engine dandy.

Fred Ruthardt, Mt. Vernon, S. D. I must say the engine is all right. **I saved about one hundred dollars in** buying from you. I don't want to be without the engine, not at all. I use it for shelling corn and grinding feed.

Frank Peck, Dorchester, Neb. My Galloway Gasoline Engine does lots of work for me. It shells corn, saws wood and grinds feed. I have no trouble with it. It is simple and easy to start. **My twelve-year-old boy starts it easily.**

Important! Get My 1913 Proposition

This year, I've got something better to offer than I ever had before. **I've got a plan by which you may get your Galloway Engine either wholly or partly free and, besides, without any soliciting or canvassing, whatever.** I can't explain it now, but I tell you all about it in a personal letter when you write me.

Engine Book FREE

Now, don't wait a minute. Get my Engine Book and my special 1913 offer right away. You won't be under any obligations at all—I just want you to fill out the coupon or mail me a postal or letter, that's absolutely all I ask. If you haven't got a pen or pencil handy, go and get one and write me right away.

Department of Farmers Organization

J. A. EVERITT, Pres.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

Read This At Once

Farmers are constantly wanting to know what the Farmers Society of Equity is, what the Equity System of Marketing is, how the Society is being organized, how the system works, and a hundred other things.

—::—

Besides those who make these inquiries there are hundreds of thousands of other producers who have not heard of this Society yet, otherwise they would be just as anxious to know all about it.

—::—

We are always glad to get these inquiries. We are also glad to have interested people send us the names of those who know not of the Society, and who are ignorant of the fact that a movement is abroad in the land now that will once, and for all time, give to agriculture the busines ssystem that it has needed for many years.

—o—

The solution of Farmers Marketing problems wait for the Equity System of marketing. And we can gain converts to the ranks of the Society only as we can reach new people and inform them of this movement to organize and federate. The whole plan is explained. Every question is met and answered in printed matter that we send free to every farmer whose name we can get. Also how to connect with the Society as a full or federated member and at once begin to reap greater benefits through systematic marketing.

—o—

Every present member of the Farmers Society of Equity and the subscribers to this paper, and many thousands of new readers who will receive a sample copy of this number should send the names of their neighbors on the printed blank on this page. You know your neighbors, we do not. The only way we can reach them is through you.

—o—

There must not be anything of selfishness in this matter. The benefits of the Farmers Society of Equity can not be monopolized by a few farmers. For a fact its greatest blessings will only come to the individuals as they are realized by the multiude of producers. An individual GIVES only his individual co-operation and power, but he RECEIVES the combined power of all the members in his demands for equity and justice in all the business of farm life.

—o—

So send the blank with the names of all your neighbors who raise crops to sell, but no others.

—o—

The problem of marketing farm crops is the greatest one before ALL the people today and one which is just beginning to have serious attention. So great are the farmers and consumers losses because of no system in marketing that no person would attempt to estimate it, but it runs into the billions of dollars. This being true, then we can state as a self-evident proposition, that the possibilities for savings and profits through a simple, practical, scientific system of marketing, successfully established, are tremendous.

—o—

Assumming that it costs $7 on an average to market $6 worth of produce from the farm to the kitchen of the consumer, which is what one of the departments of the government found; and assuming that $6 worth can be marketed for $3, by the Equity System, which ought to be enough, then the saving would be about $4,000,000,000 a year, to be divided between the producers and consumers.

—o—

And if this saving is effected it need not interfere with the business of honest and necessary middlemen. Middlemen who understand the Equity System are willing to help establish it. They recognize that there is a marketing problem waiting solution and that it must be solved along the lines we are working. We will quote from some letters.

—o—

C. H. Weaver & Company, of Chicago, member of the National League of Commission Merchants and of the International Apple Shippers Association, with a capital rating of $300,000, and the highest credit, wrote February 4, 1913:

One of the great needs of the producers at this time is combined counsel and action in distributing the crop—some organization that can direct the shipments from the large producing centers and keep track of shipments going to each of the different markets so that an equitable distribution can be effected. Present methods of marketing are primitive, unprofitable and unsatisfactory to the producer, distributor and consumer. All would be benefited by a proper system of distribution. The lines along which you are working should produce good results.

—o—

All of the things desired by the above firm are accomplished through the Equity System.

—o—

J. P| Moyer & Company, of Philadelphia, another member of the National League of Commission Merchants, with capital rating of $80,000, and the highest credit, wrote February 1, 1913, as follows:

We feel that the producers, especially through the Southern states, are very much in need of an organization and system to market their crops and federate the present local organizations so they can do this and at the same time properly prepare and grade their produce and put it up in uniform packages, and ship in car load lots. Good results will be sure to follow.

—o—

The unit plan of marketing is the key to the Equity System. In the organization now building results in packing and grading can be gotten that it was not worth trying for under the old system, or lack of system. Along the same line the Iron City Produce Company, of Pittsburg, wrote on January 31, 1913. This firm is rated at $100,000 capital and the highest credit. We quote:

Your suggestion to bring the producers into an organization that will permit of directing the marketing systematically is very thoughtful and deserves a whole lot of consideration. In the organization of farmers at different points for the shipment of perishable products, it is absolutely necessary that all should adopt the uniform grades and packages. We will be glad to co-operate with you to any extent that will devise a satisfactory plan both to the producer and distributors.

—o—

It needs but little thought to convince any person that the great trouble with all branches of agriculture is in the matter of distribution, also that nearly all classes of people are willing to co-operate with farmers to operate a sound marketing machine. But it must be evident that all they should do is to co-operate in running the machine. The farmers, themselves, must build it. And by rights they should, because they will want to own it and control it. Some middlemen are necessary. The producer who produces crops needed in distant markets cannot carry his stuff there and deliver it to the consumer.

—o—

The big problem then is to complete our machine so that the crops when raised may be put into the hopper and the machine will deliver them to the exact place where a demand is waiting for them. This is the System that we want to tell every farmer, who produces crops to sell, about.

—o—

The machine will work like the car dispatching system of a railroad. No matter where an empty car is, it is sent direct where there is another load waiting for it. Or, like the system of marketing coal. The mine owners don't throw the coal on the cars and then turn them loose to try to find a demand. No! the demand must express itself before a car is started.

—o—

We are building a machine where each market town or city will be a unit of an efficient district or national system to command the service of its central exchange at a moment's notice, and this central exchange will also record every demand on every market in the country.

—o—

This is what we want to make clear to every producer of any kind of crops to sell and show him how he can be a part of such a great machine and a beneficiary of it.

—o—

Let every farmer give this matter the most serious consideration. Be warned now and act. The time when the farmer can stand alone and independent and be sure of a reward for his labor, skill and investment has passed, if there ever was such a time.

The Farmers Society of Equity

Is a farmers' organization, incorporated, headquarters, Indianapolis, Ind. Its first and greatest object is *"To obtain Profitable Prices for all the Products of the Farm, Orchard and Garden.*

National Officers and Directors

Pres., J. A. Everitt, Indianapolis; V.-Pres, W. H. Mitchell, Hutchinson, Kas.; Treas., National City Bank, Indianapolis; Sec., M. K. Sleight, Indianapolis; National Organizer, H. F. Cutting, Portland, Ore. or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; F. S. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; C. Hayes Taylor, Indianapolis, Ind.; J. A. Harmon, Shawnee, Okla., and the President and Vice-President.

The Membership

consists of farmers and is limited to farmers and co-workers with farmers. The wives of members and their minor sons and daughters may become *special members.* The terms of membership are fully set forth in the Constitution and By-Laws.

Farming must have a BUSINESS SYSTEM. Farmers must organize to give it a BUSINESS SYSTEM. But they must be careful about the kind of organization. The right kind of an organization now will make it unnecessary to organize again. But if another mistake is made, and if the plan is not practical and the organization sound and enduring, the work must be done over in a few years.

—o—

Every city, town or station where farm produce is marketed or shipped, that has no marketing association now, should organize one at once and where there is one or more associations now they should become units of this marketing machine. Such associations by themselves are little better than individual efforts; but as a link in the great chain now being forged, and which will bind all the farmers together, they will be vital units able to help any member whenever he has any crop to market.

—o—

It costs billions of dollars every year to not have a definite marketing system and the producers and consumers pay the cost. It will cost a mere trifle in comparison to build and

— — — — — — — — THIS IS THE BLANK — — — — — — — —

FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them would be glad for improvements in our system of marketing.

These people market mainly

at the town or city of..... .....

operate the new machine. In fact, when farmers build this machine and use it they will pass the expense of operating along in the goods, as others have done and farmers paid the cost in every article they bought.

—o—

The Farmers Society of Equity plan of organizing and federating is the only one that can market every crop produced by all the farmers all over the country at prices of the farmers' own making, which will be profitable prices each year.

—o—

We can not print the full plan in this paper, but you are interested, so let us explain the matter to you and your neighbors WHO RAISE CROPS TO SELL. Don't send any others.

—o—

You have been talking, and perhaps experimenting, a lot about profitable co-operation. Now investigate the first plan that is practical from every viewpoint and an organization that is sound and will be permanent, because it PAYS.

—o—

If you are an officer of an association, fill out and send the blank for particulars of federation.

—o—

If you are a producer and dissatisfied with your present way of marketing, fill out and send the blank for particulars for organizing to use the Equity System.

—o—

Start your local union now. Then, it will be ready to receive those who drop out of the old associations. A local union of the F. S. E. will draw the people for business and for social advantages, and once in, and working on the plan of the Society, the benefits will be so great as to insure its permancy.

—o—

Quit complaining and learn how to set things right.

The Traveler

Under this head appears accounts of what our "Traveler" sees, hears and otherwise discovers. He can not, unfortunately, visit every section and locality, and those whom he can not see he most earnestly desires to hear from occasionally. This applies to every reader of this paper who is interested in the plans of the Farmers Society of Equity. Write to "The Traveler." Write today and address your correspondence to

"THE TRAVELER'S DESK"
CARE THE FARMERS SOCIETY OF EQUITY
INDIANAPOLIS, IND.

I HAVE two subjects I want to say my say about this issue. They are important maters, quite necessary to the success of our organization.

First, do you, as members and officers, read the official paper thoroughly? It is very necessary that you should. An organization must be intelligent and well informed if it is to act with intelligence, and make its actions beneficial to the Society as an organization and to members as individuals. Read your official paper. Study it. Absorb it. It is the text book of co-operative business for farmers. Discuss its articles and reports in your local union meetings.

Second, it takes a lot of hard work to dig potatoes, shuck corn, thresh wheat, or bale hay; work that requires effort of mind and muscle. But it is necessary work, and no ambitious farmer shirks it. He could, of course, work less hours a day, or neglect some of his duties, and have less work to do, but he never thinks of doing so. On the contrary, he constantly plans to occupy all his time to better advantage. Now it has come to the point where organization and co-operation is necessary to our welfare. The need grows greater as the years go by, and any farmer that neglects his duty in this respect is not better th. the farmer who neglects work on hi farm. Of course, he can exist without an organization. So could he exist if he rested an hour longer each noon, or slept an hour longer each morning. The energetic farmer does not allow his neighbors to say he is shiftless in his farm work, but it is as sure as God's sunshine that he is shiftless in his business affairs. The farmer will not use out-of-date machinery in production, but he does not get up-to-date machinery in marketing. The farmer needs improved methods in marketing far more than he needs improved methods in production. It will take a little time and a little money to build this new marketing machine, but not half as much time or money as it takes to buy a new sulky plow, or a new potato digger, or a new hay-baler, or a cream separator, or any other new implement that you think would make you a profit on your investment; yet your marketing machine will be worth a thousand times as much, in actual profits. Are you fellows going to shirk your business duties, and neglect your business opportunities forever? Of course, it will take a little work and money! What do you get that you don't have to purchase with work and money? And right here comes the point: Do you work as faithfully and conscientiously in getting ready to market your crops as you do in getting them ready for harvest, and be patient awhile, until your co-operative marketing machine is completed. Join the Society. Get others to join, then stick to it and work for your own industrial freedom.

"Well," said a farmer to me when I had cornered him into an admission of the truth and common sense of the statements above, "I reckon you're right, but what can I do—I can't change the world in a minute." Even so; but every man who reads this can say, "I will do what I can. I will join the Society. I will attend the local union meetings, and keep up my membership until we have this Society organized at every shipping point in America. You can not only say it, but you can do it, and that is all that is required.

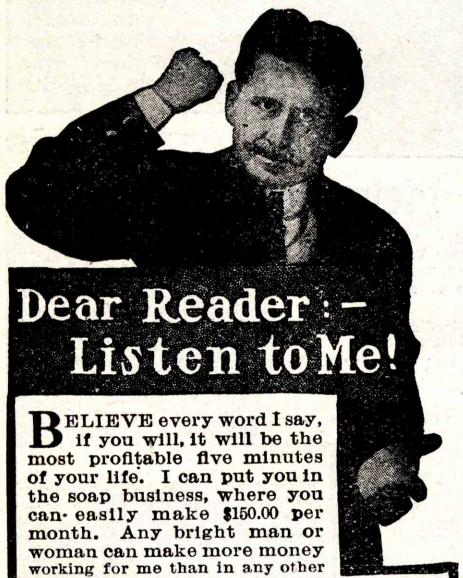
Shirkers or workers, which?

—THE TRAVELER.

Oklahoma State Union Out for Business

A letter just recently received from J. A. Harmon, Shawnee, Okla., state union secretary, he advises us that the Oklahome locals are anxious to do business with other locals direct. They have needs to be supplied, and surplusses to sell the letter concludes as follows:

"We want to get in touch with parties having seed Irish potatoes of Irish Cobbler and Bliss Triumph varieties, Minnesota or



Dear Reader:—
Listen to Me!

BELIEVE every word I say, if you will, it will be the most profitable five minutes of your life. I can put you in the soap business, where you can easily make $150.00 per month. Any bright man or woman can make more money working for me than in any other way. I have hundreds of agents making $2,000.00 per year. I have always been in the agency business myself and know the business from A to Z. I teach you how to make sales and make you successful. I have made over One Hundred Thousand Dollars selling Washing Machines and many of my old agents have made their pile and retired.

I now have a much better proposition to offer you—one that makes my agents more money, and I like the business better myself. The reason my agents have been so successful is the fact that I do not handle junk, tinware or cheap John goods of any kind that never lead to repeat orders. I give no premiums, but my agents get hard cash for their work and soon have money in the bank. It's repeat orders that make money in any business. Go into any home next Monday morning—you'll find them washing; go to their neighbors, they are washing too—in fact, it's the same thing all over the country. The demand for soap is unlimited and repeat orders never cease. Now, what does this all mean? It means someone is getting the enormous steady profit from your territory, which can be yours.

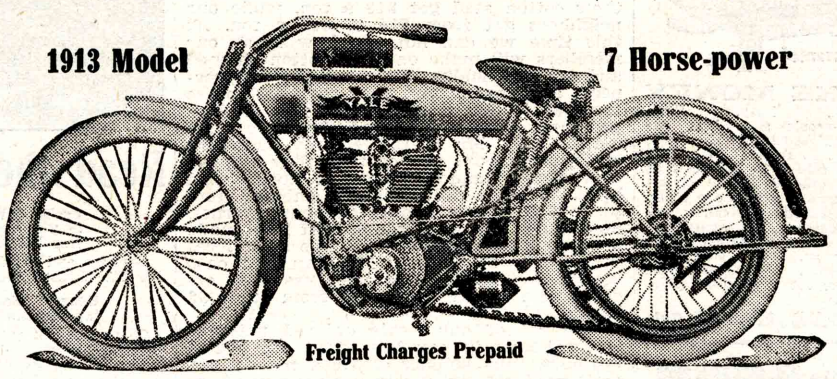
There is big money in the soap business. I give my agents the big end of the profit—a profit so large that I hesitate to state in this public manner what it is, but will be glad to advise you confidentially when you write me. Suffice it to say for the present that you will be satisfied. I give you a chance to make such a big profit that you'll be more than satisfied with your income and willing to stay with me year after year and be one of my loyal representatives. I personally teach every agent how to make money and make it fast. My plan has been a great success and I'll give it to you FREE. Now, I want to say to every man or woman who is anxious to make money and better their condition, write me. Don't lose a moment's time, but write me at once and address your letter to **W. W. TERRIFF**, *President of The Wolverine Soap Co.*, 147 Water St., **Portland, Michigan.**

Another Motorcycle Free!

J. D. WATTS, Tyro, Ark.

Winner of Motorcycle in our Third Contest.

1913 Model 7 Horse-power



Freight Charges Prepaid

RACHEL CREBS, Haviland, Kan.

Winner of Motorcycle in our Fourth Contest

We Will Give Away This $275 "Yale" Motorcycle To Some Boy April 30, 1913!

Here's still **another** chance for you boys! We've already given away four Motorcycles and now we're going to give away another one. The magnificent $275 "Yale" Motorcycle which you see illustrated above and **seven other grand prizes** will be given free to the boys—or girls—who send in the **most** subscriptions to the **Valley Farmer**—our big 25 cents-a-year farm paper—before April 30, 1913.

It won't cost you one cent to enter this contest. Just mail us the coupon printed below to let us know that you **want** to win the Motorcycle or one of the other prizes and we will give you the chance. And no matter whether you win or lose we will pay you **in cash** for every subscription you send us. All the time you are working to win the Motorcycle you may easily earn a salary of **from $9.00 to $18.00 or more a** week. You take no chances—you run no risk. You are absolutely **sure** of being **paid** for your work even if you don't win any prize at all.

Send No Money—Just the Coupon

This contest is free to all who want to enter. Simply sign and send us the coupon printed to the right and we will mail you free full particulars of the contest with illustration and description of the Motorcycle and other prizes to be given away. You may never have another chance like this, so don't wait. Remember this contest will positively close April 30, 1913, so you have no time to lose. Sign and send us the coupon right off now—today—and you will hear from us by return mail. Address

Mgr. VALLEY FARMER MOTORCYCLE CONTEST, Topeka, Kans.

You have no idea how **easy** it is to win the Motorcycle and other prizes which we are giving away free in these contests. Harry C. Guard, Emporia, Kansas, won a "Yale" in one of our contests by sending in **only 70 subscriptions** to Valley Farmer. Dick Kruse, Ellsworth, Minn., won a "Yale" in another one of our contests by sending in **only 165 subscriptions.** Rachel Crebs, a young lady of Haviland, Kans., "trimmed" the boys in our last contest and won a $260 "Yale" with **only 289 subscriptions** and also earned a salary **which amounted to $105.96.** Just think of it. Wasn't that easy? And all the other prizes have gone the same way. A very few subscriptions have always captured every one of them.

You now have the same chance that these young people had if you will get started **at once.** Remember, we don't ask you to send us one cent of your money now or at any other time. Just let us know that you want to win the Motorcycle and we will give you the chance—just **as good** a chance as we give any other boy or girl who enters the contest.

FREE ENTRY COUPON!

Fifth Valley Farmer Motorcycle Contest.

Missouri Valley Farmer Motorcycle Contest,
Dept. 11, Topeka, Kansas.

Dear Sir:—I want to enter your Fifth Motorcycle Contest and try to win the "Yale" Motorcycle or one of the other prizes, also earn a salary of from $9.00 to $18.00 a week. Please send me **full** particulars, free and postpaid, by return mail.

Dakota stock preferred. We also want Texas Red Oats, Whipporwill peas, and prairie hay. We have corn, kaffir corn, milo maize, German millet and cane. Let us know what you have, and what you need.—J. A. Harman, State Secretary, Shawnee, Okla.

Oklahoma State Meeting Farmers Society of Equity

The second annual convention of the Oklahoma State Union was called to order by President P. H. Thomas, at 1:15 p. m., January 28.

The president appointed the following committees;

On Resolutions and Legislation—Sam. J. Hampton, C. E. Helphrey and O. W. Morgan.

On Constitution and By-laws—Wm. Sanner, J. C. Casper, S. G. Walls.

On Ritualistic Work—J. A. Harman, state secretary, J. A. Bar, and G. W. Baldwin.

The secretary was then directed to give the secret work.

Minutes of the last state meeting read and approved.

The president made a verbal report and same was accepted.

Moved and carried to go into open meeting.

Moved and carried that the president appoint a committee to invite the farmers in the city up to the meeting. Bros. J. A. Henson and S. J. Brown were appointed as such committee.

Moved and carried to defer reading of secretary-treasurer's report until later.

Reading of communication and disposing of same.

Communication from National Conservation Association read and placed in the hand of resolution committee.

Letter on "Cotton in Seed" read and placed in hands of legislation committee.

Talk on "Good of Order" by Stallard, Hampton, Helphrey, Morgan, Casper, Walls and others.

Secretary-treasurer's report read and approved.

After the report was submitted the following remarks were made by Secretary Harman:

"If we could get the assistance of the press of Oklahoma, and our state officers will all become active workers, I believe we can make a very healthy growth during 1913.

"Last season our members who held their cotton seed got $18 a ton, while our neighbors got from $14 to $17 a ton. At this time we can not say how much our members will make on their cotton shipped and are still holding, but from present prospects and results last year they will make from $8 to $20 a bale. Last year I shipped three bales and cleared above the home market $29. Mr. C. E. Helphrey, secretary of Bristow local, writes that they shipped over three hundred bales of cotton and held 230 bales which made a gain of from $8 to $15 a bale above the home market. So you see that members of that local made between $2,000 and $3,000. The same local saved over $200 on kaffir corn and oats bought for them. Our members who ordered coal in car lots saved from $2 to $3 a ton.

"Several of our locals ordered potatoes and cabbage in car lots from our Idaho brothers, thus helping create a market for their products and giving our members here a great saving over our home markets.

"I think we are getting ready for a great work in Oklahoma, where we can make money for our members.

"I recommend a central clearing house at Shawnee, or some other point. It would be a great benefit to our members throughout the state. I believe this matter should be taken up with the locals in the state. By placing the shares at $10 each I believe each local in the state would take at least $100 in shares, so you see by the right kind of work in three months we could have a good working capital.

"I believe it would be a great benefit to the order in Oklahoma to admit editors of the newspapers as "press members" free of charge and I believe that they would do a great work for us in the state and I would recommend that they be so admitted."

Motion: That the state executive committee is hereby authorized to prepare plans and details of the operation of a central clearing house for members and local unions of this Society, same to be submitted to local unions for adoption or rejection. Motion unanimously adopted.

Talk on organization work by Helphry, Hampton, Harman, Sanner, Thomas and Walls.

Talk on Cotton States Cotton Corporation by Helphrey, Hampton, Walls, Thomas and Harman.

Adjournment to 7:30 p. m.

Convention convened at 7:45 p. m.

Moved and carried that we endorse question No. 1 submitted to locals.

Our Society goes on record against a charge of more than 10 per cent. per annum on loans, and the state secretary is instructed to notify all banks of this action.

Moved and carried that we endorse question No. 2, changing time of annual election of county union officers from January to July of each year.

Moved and carried that the next annual state meeting shall commence August 5, 1913, at 10:00 a. m., and every year thereafter to be held between the first and fifteenth of August.

Moved and carried that the next state meeting be held at Shawnee and that state headquarters remain at Shawnee.

Talk on "Rural Organizations," by several delegates.

FREE $250.00 Motorcycle

In the picture here you see a boy riding a Motorcycle. In other places in the picture there are six hidden faces. Can you find them? We will give this $250.00 Peerless Motorcycle away FREE to the one who has the most votes to his credit in our contest. We will credit you at the start with 1,000 votes for every face you can find in this picture.

Read the Story in the Pictures

Early 6-Weeks Market Potatoes—Ready for Market in Six Weeks. Two Weeks Ahead of Any Other Variety. Has Yielded at the Rate of Over 600 Bushels an Acre.

Farmers and Gardeners who grow potatoes for home or market will find the Six-Weeks ahead of all others.

Extreme Earliness, Good Table Qualities, Splendid Keeping Qualities, Fine Size and Shape. Great Productiveness.

This variety of potatoes combines all of these qualities in high degree. We positively assert, and have abundant and undoubted proof, that the **Six-Weeks Market Potato** does make good size, table tubers in six weeks from planting. The Six-Weeks can be depended upon to give these results if planted when the growing season has arrived and the weather is favorable.

They cook fine and dry from the time they are large enough until late the following spring. Size medium, skin light flesh color. They are perfect beauties. **Heavy and sure yielders.**

We first introduced and named this potato. From long experience we can say that owing to their quick growth, escaping drought, bugs, blight, etc., and extra yielding qualities, they are more profitable than late varieties which are oftentimes subject to unfavorable season conditions. The Six-Weeks is one of the best winter keepers, too, if planted late.

They grow so rapidly that potato bugs have little chance at them. Six-Weeks potatoes yielded on the farm of the originator in Ohio, 420 bushels an acre. Next year 380 bushels. Two years later over 600 bushels.

Planted Six-Weeks May 3. They grew fine. We had new potatoes cooked June 20. They are the earliest we ever saw.—Daniel Donovan, Carroll Co. Tenn.

Of 17 kinds potatoes planted, early Six-Weeks Market was superior to all in quality, size and earliness. I think they are the best potatoes on earth.—C. Carroll, Pipestone Co., Minn.

It is the best potato I ever saw, yields well, good size, cooks up like balls of flour, and is delicious.—Thos. Sinnock, Adams Co., Ill.

The earliest and the best extra potato. Thousands of testimonials received. You will make no mistake if you plant Six-Weeks Market Potatos this spring. If you think you can't afford to plant many, get enough to raise your seed for next spring.

Price: Our stock is limited and price is made subject to being unsold. Money will be promptly refunded if supply is exhausted. **By mail, postpaid:** 1 lb., 30c; 4 lbs., 75c. **By freight or express:** ½ bu., 75c; 1 bu., $1.25; 5 bu., $5.50; larger lots at $1 bu. Bags free. Shipped when weather is favorable.

Ends The Misery Of Wearing Worthless Trusses

How 60 Days Trial Is The Only Safe Way To Buy Anything For Rupture

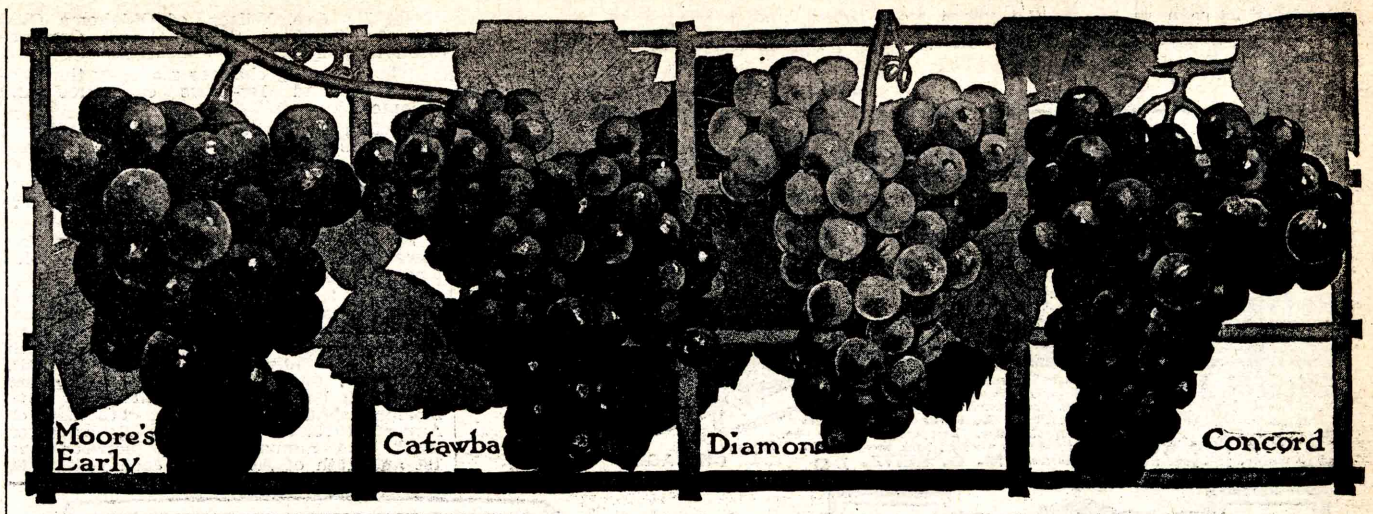
Here is something absolutely GUARANTEED to keep rupture from coming out—something that does away with the misery-causing leg-straps and body springs.

AwayWithLeg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City



Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

Talk on "Marketing of Butter, Eggs, Poultry and Provisions."

Moved and carried that this state union endorse National President J. A. Everitt, of Indianapolis for Secretary of Agriculture and the president and secretary are instructed to telegraph President-elect Woodrow Wilson, of said indorsement.

Moved and carried that we accept Bro. H. H. Stallard's offer to use the columns of his paper for Equity work.

Moved and carried that we appoint Mr. H. H. Stallard to look after legislative work for us.

Moved and carried that we proceed to elect officers.

P. H. Thomas was re-elected president. G. W. Morgan, of McLoud, was elected vice-president. J. A. Harman was re-elected secretary-treasurer. Wm. Sanner was elected as organizer.

The following is the executive board as elected; P. H. Thomas, G. W. Morgan, J. A. Harman, Wm. Sanner and C. H. Helphrey.

Adjournment to 8:30 a. m., January 29.
Convention convened at 9:15 a. m.
Meeting called to order by president.
Report of resolution and legislation committee:

Resolution on Forest Reserve.

Whereas, We have a reason to believe that an organized and insideous attempt is being made by interests like the water power combines and the lumber trusts, proposing to transfer our great public resources—the national forests and water power from national to state control. Behind this movement is the vested interests of enthroned monopoly, which under the flimsy pretext of "State Rights" are seeking to get possession in their hands for their exclusive unregulated control, and,

Whereas, We are advised that such a movement is on foot in Congress, and is a pressing danger until it is met and overcome, as upon the transfer of our national forests to the states as decidedly the most serious danger that has yet confronted the conservation movement. And

Whereas, We notice that with seeming regularity that the incorporated monopoly can shift from national control to "State Rights" with as much agility as an acrobat when it comes to serving their own interest.

Therefore, Be it Resolved; First that the annual convention of the Farmers Society of Equity of Oklahoma, now assembled is unalterably opposed to the transfer of our great national forests and water power and other great natural endowments, to state control, as it would entail useless expense, besides making it easier for the interests to get possession of the uncounted millions of wealth of our natural resources; Second; That we respectfully request our representatives and senators in Congress and our President-elect Hon. Woodrow Wilson, to be on guard, and vigilantly protect these great natural endowments, that God has given us for the use of all mankind.

Adopted as read.

Resolution on Selling Cotton in Seed

Whereas, the prevailing custom of marketing cotton in the seed to gins and oil mills is wholly against the interests of farmers, and is the most dangerous menace to the welfare of the cotton growers, independent cotton gins and oil mills, as well as to buyers and shippers of cotton and destruction to markets. And

Whereas, the said custom of selling cotton in the seed is tending to build up a monopoly of the state's cotton business, whereby the moneyed interests are insideously getting the power to monopolize which can only have one end; that is to dictate terms to all cotton growers who have to do business with them.

Therefore, in consideration of the facts above stated, asd the further fact that investigations and dissolution suits have been futile and the majesty of the law is a dead letter when it comes to the regulation of the money interest,

Therefore, Be it Resolved: First; That we demand the enactment of a law regulating the marketing of cotton and method of handling. Second; That all cotton offered for market, shall be ginned and packed in the standard bale and that suitable penalty be provided for the punishment of any farmer who shall sell or offer for sale his cotton in the seed. Third; That a state law be enacted providing for the sampling and grading of cotton by the state, and that cotton shall be sold on the basis of grades and that said inspection and grading of cotton be under the direct control of the State Board of Agriculture. We believe the samples from the cotton will be sufficient to meet the expense of the state cotton inspector, if retained and sold by the state.

Adopted as read.

Resolution on Ginning

Realizing the tendency to monopolize cotton ginning and cotton oil business, thereby controlling cotton and cotton seed to the great injury of farmers; and furthermore, realizing the systematic acquirement of the ownership of all the public custom gins by cotton ginning and cotton oil combines; therefore, be it

Resolved, That we demand the enactment of a law prohibiting such monopolistic ownership, and the dissolution of the present ginning monopoly. Second: That a rigid provision be made compelling all gins to be licensed by the state and that all gins shall be compelled to designate their respective owners or stockholders and the amount of stock owned by each individual or other corporation. Third: That oil mills or directors or stockholders of oil mills shall be prohibited from owning custom gins or stock in custom gins. Fourth: That no combination or ginning company or individual shall be allowed to own more than one custom gin, when such ownership indicates that an attempt is made to control cotton ginning or cotton seed.

Adopted as read.

Moved and carried that resolutions 2 and 3 be referred to locals and that they get all the signers to the same that they can and send in to Mr. H. H. Stallard, at Oklahoma City, to be presented to the state legislature.

Adopted as read.

Resolved, by the state meeting of the Farmers Society of Equity of Oklahoma, that we thank Mr. Geo. Wilson, of the Southern Cotton States Corporation, for being present at our meeting and outlining the plans of the company. While we do not give the plan our official endorsement at the present time, we are disposed to thank him for the courtesy of being present and detailing their plans for handling cotton.

Adopted.

Resolution requesting Senator Barrett to withdraw his bill from the Senate regarding the Agricultural College Board.

The state convention of the Farmers Society of Equity in annual session at Shawnee held on the above date, unanimously adopted the following:

The Whereas, There has been introduced in the state senate a bill by Senator Barrett proposing a complete change in the manner of the election of the state board of agriculture, thus defeating the will of the people as expressed at the ballot box last November. Said bill proposes the appointment of a state board of agriculture by the governor to hold until the regular election of the year 1914.

Therefore, Be it Resolved, That we enter our protest at this attempt to thwart the will of the people, and hereby memorialize the Hon. Senator Barrett and the other members of that honorable body that we are opposed to the proposed change in the election of the state board of agriculture. And, be it further

Resolved, That we are opposed to any other change in the election of our state board of agriculture that will take it out of the hands of the farmers, the very class for whom it is organized and intended to benefit, and that we respectfully request that said bill introduced by Senator Barrett be withdrawn.

Resolution Thanking the Mayor and Citizens of Shawnee

To Mayor Stearns and through him the citizens of Shawnee, the state meeting of the Farmers Society of Equity in annual convention assembled, our sincere thanks is hereby extended. Although we realize that during our convention in your city, you were deeply absorbed in the county-seat location question, and that you were putting forth every effort toward that end, but not to neglect us as your guests. That we received proper courtesies and cordiality at your hands.

WE WERE surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent. of the farms in the country. Grape vines are inexpensive to start with. They can be planted fall or spring; they are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and lasts longer. And in addition to all these things, grapes bear fruit practically every year and the fruit is valuable and desirable almost second to none that grows.

Considering the sum of these advantages for the grapes, when we received the census report we were in doubt as to its correctness. We thought nearly every farm had some, so we wrote to the Director of the Census and received this reply:

Up-to-Date Farming:

Your letter requesting information regarding the number of farmers reporting grape vines in our recent report on the "Production of Grapes," received. As you probably know, the census reports on agriculture are based on a farm to farm canvass, and if a farmer grew but one grape vine, he would be reported. The intention is to get a report of every farmer who grew a grape vine in 1909.

Very respectfully,
E. D. DURAND, Per W. J. S.

The fact is that only one out of seven farms has a grape vine. Then there are hundreds of thousands of town homes that have until this time neglected this handsome vine and universally desirable fruit. There is no yard or garden that does not have room for a few grape vines, so we have set ourselves the task to place

ONE-HALF DOZEN GRAPE VINES ON EVERY FARM

and in tens of thousands of other smaller places, and at the same time employ the vines as a means to greatly increase the circulation of UP-TO-DATE FARMING.

This is Our Offer

Send 75 cents and you will get UP-TO-DATE FARMING a full year and will also receive by mail or express, all charges paid, one-half dozen (6) strong two-year-old grape vines with full directions for planting. The varieties are Niagara, Moores Early, Concord, Diamond, Worden and Catawaba. This collection covers extra early to late varieties and the three colors, black, white and red. No better sort can be planted.

All vines will be sent at proper season for planting, no matter where you live.

Yours Free Send a club of four at 75c—$3, and we will send you the paper one year and the collection of six vines free. That is, five for the price of four, or we will send you the paper five years delivered. Paper and vines will be sent to separate addresses if requested. Up-to-Date Farming, Indianapolis, Ind.

Up-to-Date Farming
Indianapolis, Ind

is made evident when we tell you that without a dissenting vote we retain our state headquarters here in your city and will hold our next annual meeting in your city.

Adopted.

Moved and carried that the secretary communicate with national headquarters and locals in regard to seed potatoes and seed oats.

Moved and carried that we now hear from Br. Geo. Wilson, of Oklahoma City, on the Southern States Cotton Corporation movement.

The following changes made by the Constitution and By-Laws committee and adopted:

Section 3, Article 1—Add to "Wives, daughters and minor sons to be admitted free as special members, also editors of newspapers as press members."

Section 1, Article 4—Is changed to correspond with Sec. 3, Art. 1.

Section 5, Article 6—Changed as follows: The word January in 8th and 10th line to July.

Cection 3, Article 7—To read as follows: The officers shall be a president, a vice-president, a secretary-treasurer, and an executive board of five members, of which the above officers shall be four of said committee, and the annual state meeting date shall be changed and the next state meeting shall begin on the 5th day of August, 1913, at 10 a. m., and thereafter shall hold annual meeting between the 1st and 15th of August of each year, said time of meeting to be set by the previous state meeting.

Resolution submitted and adopted: Thanking the Press of Oklahoma for courtesies extended in the publication of notices of meetings, etc.; specific mention was made of certain publications whose friendliness in that respect was pronounced, and strictures were directed at the County Democrat (Tecumseh) and through it all other publications which have studiously avoided any reference to our quarterly, county, or annual state meeting, thus showing a spirit to ignore our great work, or a mercenary desire to extort so much per for our notice.

Moved and carried to adjourn to meet in Shawnee on the 5th day of August, 1913, at 10:00 a. m.

Why Incubator Chicks Die

The book entitled "The History of White Diarrhoea, or Why Incubator Chicks Die," will be sent absolutely free by return mail to anyone sending us the names of seven to ten of their friends that use incubators. Two Ordinary Touring Cars, Two Wagons and Two Teams of Horses,

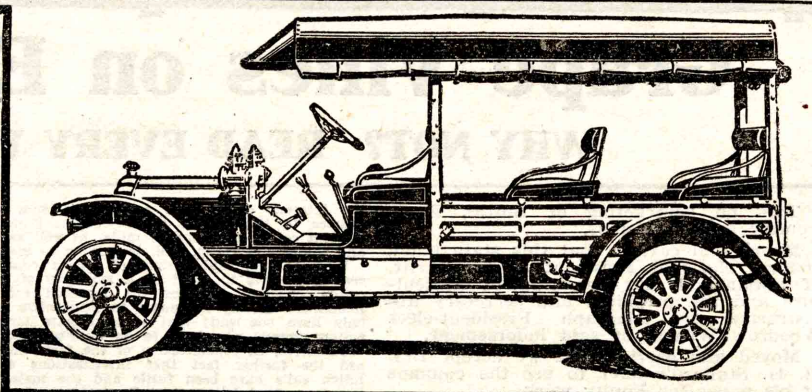
Approximate, but Do Not Give the Pleasure or Actual Service of—



The White Combination Car

The Most Remarkable Car Ever Made. It is a Touring Car and Motor Wagon of the First Grade—All in One.

Why We Built This Practical, Complete Car.

THE automobile business has now reached the point where sentiment has given way to reason. The earliest designs of cars followed the model of horsedrawn vehicles. Then came the present design, with engine in front, and seating in a carriage body 4, 5, or 7 people, according to size and price. But this type, now so common, has no provision for any extra passengers or even light baggage. On the other hand there are many times when you drive alone or with only one passenger, but the big empty tonneau you find useless for any practical purposes, because of the fixed, impractical carriage body. This condition of affairs with thousands of owners has made a place for the White Combination Car.

A Luxurious, High Grade Automobile, it is Still Practical and Economical.

If you own an automobile you appreciate this condition at once. If you do not, it will confront you in the near future. Good as it is, any ordinary Touring car is an expense—a luxury. You enjoy the exhilaration of its speed and the easy way it shortens distances. But you grumble at its uselessness for any sort of practical work, as you jog to town in your loaded wagon behind slow moving horses, and think of its powerful engine, so capable of *work*, lying idle at home. And there never *was* a touring car that could take, in one load, a merry party such as filled the big spring wagon—until the Nine Passenger White was made. This car does the work and play of all your wagons and touring car *combined*, and lasts longer than any.

Its Design, Power and Equipment.

The lines of this car are distinct. It is a departure from the touring car models, while in its grace and finish it does not resemble a motor truck. It has a wheel base of 120 inches, 34x4½ inch tires and a perfectly balanced chassis. This gives the greatest riding comfort and makes it as easy to operate as a light roadster. It is driven by the famous White, long stroke, 30 h. p. quiet engine, appreciated the world over for its economy of fuel, its dependable power and durability. Even when fully loaded this car will pass most cars on the level, and will easily make hills that other cars cannot climb at all. *There is ample room on the driving seat for two and each of the two seats in the wagonbox comfortably hold three. These are roomy and comfortable and are amply cushioned with the best finished leather.* When desired, one or both of these seats can easily be removed by one person in a couple of minutes, and the space utilized for baggage, freight, produce or anything you want in a compartment 6 ft. 10 in. long, 43 in. wide, 5 ft. high from floor to top, with side boards and tail piece 14 in. high. This serviceability does not affect its qualifications as a high grade automobile. Every part of the car—its power plant, chassis, springs, wheels, lamps, top and curtains, body and seat fittings—are the result of the highest type of workmanship and engineering ability, and the very best materials—as in all other White cars, which are second to none in the world.

This is the Car You Actually Need.

Whether you own an automobile or not, this is the car you need, the car you have unconsciously wished for—the car you would buy could you see it and have it demonstrated. Fill in coupon below *today*.

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

Up-to-Date Farming Doing a Great Work

DEAR EDITOR:

On page five of January 15 number, you ask, "What think ye?" Yes, I always read everything in UP-TO-DATE FARMING, and think you are doing a great work, and I often wonder at your pluck and perseverance. About the "Mortgage-Bond" scheme, I do not think that we need to go to any of the old countries to get a financial credit plan for the farmers of the United States. It appears that our Congress has inaugurated a postal banking system and after the money is deposited there, it is not used to very good advantage, in my opinion. Now, if the money deposited in postal savings banks would be used as a basis for rural credit, I believe it would be the best thing that our country has ever seen.

Let Congress make every postoffice a receiving bank, and the postmaster a loan agent to loan this money to farmers at a fair rate of interest. If they can get the money deposited at 2 per cent. as at present, then let the farmers have it at 2 1-2 per cent. instead of turning it into the banks from where the farmers can only get it at from 6 to 12 or more per cent. If enough will not be deposited in the postal savings banks at 2 per cent., then raise the rate to 3 or 4 per cent., and let farmers borrow at a slight advance. All restrictions should be removed, permitting any person to deposit any amount in the postal savings banks that he wishes to. Postmasters should be permitted to transfer the surplus deposits from one office to another. In that way money would flow freely over the country from the places of heavy deposit to the places of heavy demand, for agricultural purposes or moving the farmers' crops.—G. A. McComber, Queen City, Mo.

A Warning

DEAR EDITOR:

Please warn your readers against a smooth game that has been worked in northern Indiana. It is being worked by men who represent themselves to be agents for a Michigan bath tub and heater company. They represent what is claimed to be a wonderful invention of a bath tub and heater. The scheme is to sell rights to handle the article, which includes an order for a large number of bath tubs at $12 each. A good and substantial bath tub and heater is shown by the agent, but after he has got his contract and his order, the agent departs, and the tubs, if any are delivered, are so cheaply made and flimsy, as to be practically worthless.—A Subscriber.

Let's Get Together

DEAR EDITOR:

UP-TO-DATE FARMING is surely an ideal farm paper. I like to read it very much. I agree with all its teachings. The time has arrived for farmers all over the United States to co-operate and pull together, in order that they can fix a fair price on their products, otherwise they will be poorer raising bigger crops. It makes my blood boil to think that farmers are led on to produce great volumes of stuff and then turn it over to a gang of greedy gamblers and exploiters, to handle it to the disadvantage of both producers and consumers. So, farmers, let's get together all over the country just as fast as possible, and we will protect ourselves, and at the same time protect the consumers of our crops. Let some person in each community take this up. It is clear that a small organization in any community will be profitable to the farmers, and it is these little organizations that will build the great national co-operative Society.—Wm. Klepfer, Columbia, S. D.

Opens People's Eyes

DEAR EDITOR:

UP-TO-DATE FARMING certainly opens people's eyes. It is the best and the most valuable paper I ever read and I would not do without it.—Geo. E. Swanson, North Gerard, Pa.

Call Schoolhouse Meetings

I like UP-TO-DATE FARMING, and particularly I like to read the department headed "The Field." The views of the people as expressed there, are very good, but I want to say that I do not think the whole

responsibility for establishing a farmers' marketing machine should be thrown on our paper, UP-TO-DATE FARMING, that has already done so much. While we want it to lead, my idea is for all of the subscribers and all of the members of the Farmers Society of Equity, to have meetings in the school houses in their communities, and place before the people the idea of organization as taught by UP-TO-DATE FARMING and as is being put in practical operation by the Farmers Society of Equity. Let any interested person send to headquarters and get the necessary literature, supplies, blanks, etc., so that he may present this great proposition the most effectually at such meetings. I am recommending this from my personal experience and I know it will work good. For instance, in our local we tried every way to get the farmers and it was an uphill job. Then at a meeting of our local, we adopted the school house plan and had our first meeting last Wednesday night, the 15th of January. It was a grand success. There were forty-two farmers there. Some of them belonged to other organizations. They asked if they could come in with us. We told them our organization was big enough and broad enough for all. So we expect forty and possibly more, new members at our next meeting.

Try this, brethren, and also help our paper. Then soon we will not need to care what kind of a report Secretary Wilson sends out, but we will have him and the speculators and the gamblers all by the whiskers. How many will call such a meeting? Let our editor know, and also I would like to know.—W. C. McGuire, Hamilton, Mont.

Have Been Cheated Out of Millions

DEAR EDITOR:

I live in the great broom corn growing sections, but we grow several different kinds of crops in this county. The farmers need an organization here because we have been cheated out of millions of dollars in broom corn alone. I want to ask what we can do to prevent this. It costs about $25 a ton to grow broomcorn while it is selling all the way from $10 to $50 a ton this year, while last year it was $60 to $150 a ton. The rumor is abroad that oftentimes the buyer of the broom corn makes as much for handling it as we get for doing all of the work. It appears to me that the farmers could make the strongest union in the world, if they would only organize as UP-TO-DATE FARMING recommends, and then unite all of their local organizations up in a strong chain, without any missing links.—F. M. Girton, Logan, Beaver Co., Okla.

(Organize. Organize on the Farmers Society of Equity plan. Every local union you organize in the broomcorn growing section will be a link in the chain that will eventually bind you all together in strong co-operation that will make you absolute masters of marketing your own crops for your own prices.—Editor.)

Looks Forward to the Next Issue

I have found UP-TO-DATE FARMING very beneficial to me in many ways, and profitable to such an extent that I am always looking forward to the next issue. When it comes I always go over it at once, thoroughly. The articles on marketing, crop reports, and trade I find to be the most satisfactory of any in the different farm journals, and the system of marketing as advocated is to my mind the only one feasible for the whole body of farmers.—Geo. I. Homel, Mannville, Florida.

Fills a Long-Felt Want

DEAR EDITOR:

I have just received the first copy of UP-TO-DATE FARMING on my new subscription. I have read the contents carefully. Now, I must certainly say that it is the grandest farm paper I ever saw. You not only educate us farmers on farming matters, but your policy of educating us on marketing is certainly unique, and exclusive with this paper. This education on marketing is filling a long-felt want in the right direction.—E. E. Bell, Oakman, Ala.

Farmers Must Help Themselves

DEAR EDITOR:

You have asked us what department in UP-TO-DATE FARMING we like best. This is a hard question for me to answer because they are all good. I will say though that I like those articles best that teach us about marketing. I cannot think that the people who are teaching more production at the present time are entirely unselfish, but they know the more the farmers raise the more there will be to handle and transport. If I were asked why does James J. Hill tell the farmers to raise more stuff, the answer would be, "Why, to benefit Mr. Hill and his railroads." It just occurs to me that it is up to the farmers to help themselves, and the way to help themselves is to organize in the F. S. E., as our paper tells us. This is the only way that farmers will get their own, in this or any other age.

I like the "Personal Message" from the President and I like the "Traveler," and I like every front cover picture, as each one teaches an important lesson. I would like to see more exposure of the fallacy of the teaching of those who are crying larger crops, without the means to get profitable prices for them. One of our most successful merchants here told me that there was more money in a half crop than in a big crop, for the farmer and the merchant, but I will say that if our plan of marketing was established, then we could welcome

Selected Novels from Favorite Authors Free

We want to give you this big collection of thirty-nine Novels, Novelettes, and Stories, some of the most interesting works of the most popular writers. Each is a complete story in itself. All are well printed on book-paper from new type and are firmly bound in paper covers. Up-to-Date Farming 5 Years and Farm Journal 5 Years BOTH $1.65

1913, 1914, 1915, 1916 and 1917. — Up-to-Date Farming, Indianapolis, Ind

Don't Pay Holdup Prices For Lumber and Millwork

Save 40% to 60%. Stop paying 5 profits

That's what makes the building material you buy of your dealer so outrageously high. Comes from a mill controlled by the lumber combine. Too high a cost to begin with. After that five middlemen — wholesaler, jobber, commission man, salesman, and dealer —all get a fat profit—and you pay it all. We stop this hold-up game.

We own our own forests and mills

and sell you direct—at one profit

We are a million dollar corporation, with 45 years lumbering experience. We own billions and billions of feet of standing timber in the famous Puget Sound territory: fir, cedar, spruce, hemlock, western soft pine, etc. We do our own cutting, logging and hauling. Six great mills prepare this lumber for shipment. They are producing daily 20 to 30 cars of highest quality materials. *You* get all the benefit of this great cost-reducing organization. *Not one* middleman gets a profit.

Immediate shipments. Quick delivery to you.

We carry immense stock. Miles and miles of lumber piles, and huge warehouses full of millwork and building materials, await your order. All shipments made within 24 to 48 hours. Seven great transcontinental railways maintain fast freight schedules from Seattle. Our shipments reach all points west of the Mississippi within two weeks. It's certainly worth while to look ahead two weeks, save 40% to 60% and get materials guaranteed to be better quality.

Note the lowness of these prices F.O.B. SEATTLE

Celebrated for Quality

"Puget Sound" lumber is celebrated for quality. Free from large knots and sap. It's the strongest as well as the longest lasting of wood. Resists rot and decay. Doesn't warp or twist. No waste or working over, because it's *straight*.

Satisfaction Guaranteed

We guarantee not only lower prices but that you'll get better materials, grade for for grade, than trust or combine standards. If we don't make good you can get your money back. The risk is all ours. We're glad to take the risk. We'll more than please you.

Freight rates in our favor

Other houses ship various materials from different points and usually in less than car lots. Our orders are loaded at *one* point and in complete car lots. The car lot rate, and our amazingly low mill cost never fails to bring our prices *way under* those of all competition, local or otherwise.

Send us your bill of materials for estimate

We ship everything needed for building, complete: lumber, sash, doors, shingles, millwork, hardware and paint. Let us show you in actual figures how much we can save you on the building you're planning. If you're not ready for actual figuring,

Mail Coupon today

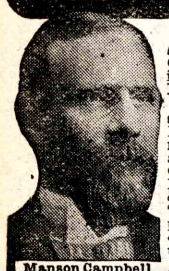
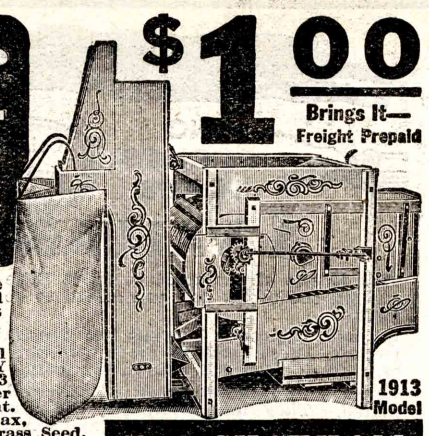
One Dollar

Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded



Manson Campbell



$1.00 Brings It— Freight Prepaid

1913 Model

The CHATHAM Grain Grader and Cleaner

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

Your Dollar Returned

if you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades co rn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and *exceedingly* interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept. 31,

MANSON CAMPBELL CO., Detroit, Mich., Kansas City, Mo., Minneapolis, Minn.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

the efforts of the other people to help us in production.—C. M. Calhoun, Deer Park, Md.

WHAT BECOMES OF THE MONEY

H. FULLER, in "The Onlooker," published at Foley, Ala., is greatly exercised over the quqestion of what becomes of the $2 membership fee that is charged to become a member of the Farmers Society of Equity. Mr. Fuller believes that $1 is all any farmer should pay toward a marketing organization and he very, very mysteriously intimates that somebody may be getting rich off of the other dollar. So he says: "I would like to ask those who are on the ground floor, what disposition is made of that other dollar, anyway."

This is a very proper question. We are glad that Mr. Fuller has asked it as other farmers may want to know, too. For the information of all curious people we publish the following from the by-laws of the Society:

Membership Fee

Sec 3. The membership fees shall be $2 per member to join any local union of the Society. A member-at-large shall pay $1 membership fee, with an additional $1 when he connects with a local union. This shall be sent to the state secretary in organized states and to the national secretary in unorganized states, except 20 cents out of each full fee shall be retained in the local union treasury. The membership fee pays all dues for the first year, and includes a year's subscription to the official paper.

Apportionment of Membership Fees

Sec. 5 The membership fee of $2 shall be apportioned as follows:

To the National Union	$ .35
To the State Union, if one	.10
To the County Union, if one	.10
To the Local Union	.20
For the Official Paper	.25
For Organization	1.00
Total	$2.00

To explain further we will say that the great work of the Farmers Society of Equity is to complete the organization all over the country. This is the expensive part and full one-half of the membership fee is apportioned to it. Organizers must be employed and paid, circulars, booklets, etc., must be printed and circulated, etc. If Mr. Fuller thinks $1 from each member is too much for this purpose, let him call to mind that he and others are paying about $7 for marketing $6 worth of produce down to the consumer. We believe, when the F. S. E. machine of marketing is completed, it can be done for $3 or less.

But Mr. Fuller says further:

It is my opinion that the founders and officers of the Equity derive greater benefits from it than do any of the Society members, and why pay tribute to a man in Indianapolis for the privilege of marketing our farm products in Birmingham, Atlanta, Dallas, or any other place for that matter?

The National President of the Farmers Society of Equity is granted a salary of $500 a year (see Section 9, of Article VIII). If he did not have other sources of income he could not live on this salary. But out of the bigness of his heart and his interest in the farmers' welfare he has refused to take more than a nominal salary until the farmers are getting all the benefits that can only come through this plan. The highest paid officer or employee at headquarters is at $20 a week. Let the people draw their own inferences of headquarters and as to the motive of Mr. Fuller, and of the publisher of the paper that would print Mr. Fuller's letter without question or investigation.

Organizers

THE Farmers Society of Equity wants an organizer in each community.

A local union must be organized at each market town and city or shipping station. We have an exceptionally good proposition for the right person. The right person is any man who stands well among his neighbors and wants a better marketing system established,

Hundreds of organizers who succeed locally will be given a larger field. If you want to employ part, or all of your time profitably, write for our terms.

A post card or letter will bring full particulars by return mail. Don't delay. Every field should be occupied.

Farmers Society of Equity

After Many Days

By Anabel Dwight

"OTIS YORKE, I wish to heaven I had never met you!"

The woman who uttered these words was young and would have been beautiful but for pallor of her cheek and the strained and desperate expression of her dark eyes.

The room was poor and bare, and a sickly fire burned in the tiny range. The woman whose patient efforts had kept the miserable room clean was dressed in a cheap, dark print; her hands bore the marks of toil, and her red lips were compressed with the air of one who had struggled to battle the world bravely.

And yet it was so short a time since she had gone to Otis Yorke a blushing, radiant, eighteen-year-old bride. It had seemed to her then that no woman could ever be so happy as she.

Otis was her one lover—grand and splendid and generous. To be sure they called him a trifle wild, but the innocent young wife was so sure of winning him into the "straight and narrow path" after he was all her own.

Surely when Otis Yorke wedded Hester Goeffrey he had never expected to listen to such words as she had just spoken. He loved her deeply and passionately, yet that love had not kept him from wading deeper and deeper into dissipation.

One by one the treasures and luxuries of their dainty little home had been sacrificed, until, six years after their happy wedding in the old gray church on the hill, they had come to this—a miserable tenement in the poorer part of the town, a faded print dress on the young wife whose toilettes, though not extravagant, had been marvels of taste and beauty; and the husband, handsome Otis Yorke, is a slouchy, ill-fitting suit of clothes, with a battered old hat on the back of his head, staggering and leering, the pitiful, foolish smile of a drunkard making his features repulsive to look upon.

A wild northwest storm was coming on. Hester had saved a little sum of money to buy fuel and food with, and he had discovered its hiding-place, appropriated it, and spent it in debauchery—to return to her in this condition.

He had reeled across the room to enfold her in his drunken embrace, and Hester, half wild with weary dispair and a feeling of loathing for this man whom she had loved so well, pushed him off with the passionate words with which this story opens.

They seemed to cut through the mist with which intoxication had blurred his senses, for he stared at her in silence for a moment, while an expression of gravity supplanted the silly grin.

"Hester," he said, at last, trying vainly to speak with distinctness, "do yer true-(hic)ly mean it?"

She looked him over scornfully—a look that made him wince.

"Yes, I mean it," she said, thinking meanwhile what folly it was to bandy words with a man in his condition. "I have tried to be a faithful wife to you, Otis; but it is hard to keep one's love and respect for a man who degrades himself as you do; and so I wish from my heart that we had never met, that I might not have learned to love you only to watch that love die a cruel death."

She turned away from him and sat down by the window, some slow tears dropping from her eyes.

Down at the foot of the steep, rocky road lay the brown wooden piers where the sea washed with foaming lips as the wind swept keenly down from the northwest. A cold, gray sky overhead rendered the outlook more dreary.

"Hester," said Otis, following her and laying one hand upon her shoulder. "I will go away, my girl. You shall not be bothered with me any more. Good-by!"

"Good-by!" responded Hester, in a hopeless voice, but never once turning her head; for he was always bidding her an eternal farewell and rushing off, only to return drunker than ever.

She heard his footsteps along the hall; heard the front door open and close behind him; saw him as he went down the street, and wondered a little at the firm, erect manner with which he carried himself—a ghost of the old swinging stride which had brought him to her side in the happy days of their courtship.

She watched him until he disappeared among the shipping at the foot of the hill, and then with a sigh she lowered the curtain, and turned back within the room to light a lamp and busy herself with some sewing which would earn bread for the morrow.

Many years passed before she looked upon the face of her husband again, for she waited in vain for him that night, and searched in vain for him for many days. He had left no trace behind him.

And then, as the days lengthened to weeks, and the weeks to months, Hester's neighbors settled down to the belief that Otis Yorke was dead. He was too shiftless a fellow, they said, to remain away from the wife whose unceasing toil kept a roof over their heads and bread for their mouths. Surely he must be dead—and it was a good riddance.

So they all began to rally around Hester; to help her, and visit her, and by degrees they coaxed her back into the old, pleasant, sociable life from which she had shut herself in very shame.

Her thin cheeks lost their haggard outlines, and a faint color bloomed again therein; but her eyes held always a look of wistful expectancy.

Now that her husband was gone she remembered only his kindness and generosity. She was forever reproaching herself for her angry, scornful words on that last day. Perhaps if she had been more patient she might have won him back.

She did not accept the popular belief that he was dead; and when, three years after his disappearance, Squire Zeelie, one of the wealthiest men in town, offered her his hand in marriage she refused him almost indignantly.

"Sir, if I were a single woman I might thank you for the honor; but I have a husband, and I believe he will one day return to me."

So the old squire, disappointed but somewhat amused, went back to his big, lonely mansion on the hill, while Hester in the cosy cottage which she had been enabled to hire, drew her low rocker closer to the light, and took up her sewing.

It was a clear, bright, moonlight night, with a hint of frostiness in the air, but the room wherein Hester sat was cosy and bright.

Presently a ringing step came up the street and paused at the house, and a knock summoned her to the door.

A stalwart figure stood there, enveloped in a long ulster. A curling beard grew nearly to his eyes, and a broad-rimmed hat covered his head.

"Does Mrs. York live here?" he inquired, in a voice which sounded rather affected.

And Hester answered in the affirmative and invited him to step in, looking at him all the time with wide, bright eager eyes.

"I have come, madame," said the stranger, as he entered the room and cast a curious look about him, "with a message from your husband, whom you doubtless believe to be dead."

"You are wrong there," interrupted Hester. "I have never given up hope that he would some day return to me."

And she never once removed her intent gaze from the man's face.

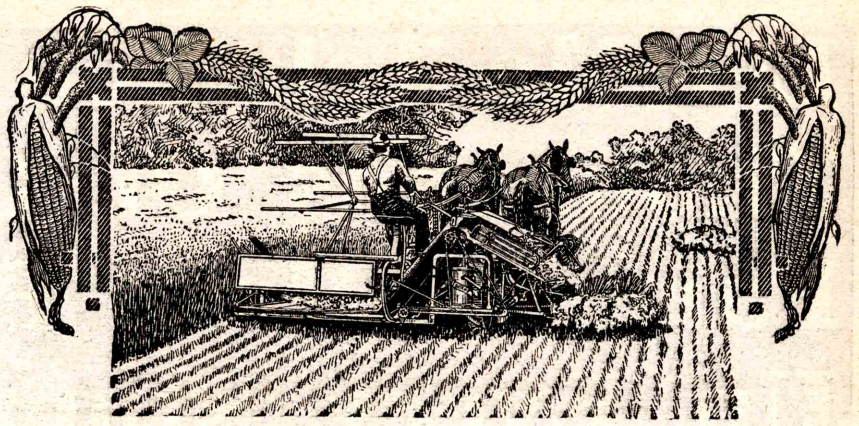
"Strange," he muttered, dropping his eyelids with a peculiar smile. "He was a good-for-nothing, drunken scamp—I beg your pardon, ma'am, but he was! Didn't begin to be worthy of a dear, sweet little wife like yourself. But he has sent me to say that he made a pile of money out in Texas, and if you will come out there with me, he will make up for all the misery and trouble he has caused."

"Otis! My dear husband!" And Hester Yorke tossed the broad hat from the han's head, and clasping her hands about his neck, burst into a flood of happy tears upon the breast which was to be her shelter forever more.

"How did you know me?" asked Otis Yorke tossed the broad hat from the man's away the tears.

"I cannot tell," she answered. "By instinct, I guess. I knew you at the very first. Oh, my dearest, God be praised for this blessed hour!"

"Amen!" responded Otis, solemnly. "God helping us, we will begin a new life together."



Take Advantage of Our Seventy Years' Experience

SEVENTY years' experience with harvesting and haying machines and tools and with equipment for building them economically; seventy years of exhaustive experimenting, testing, field work, and distribution constitute a tremendous advantage in favor of our machines.

Years ago the basic patents on these machines ran out Anyone who wants to may engage in their manufacture. But it is one thing to build binders and haying tools, and another and entirely different thing to build guaranteed machines and sell them at the prices of ours. Farmers have learned to value the high standard of quality which accounts for the dependability of harvesting and haying machines and tools bearing the well-known names

Champion Deering
McCormick Milwaukee
Osborne Plano

Changes in the construction of these machines are made only when actual work in the field shows the change to be an improvement. What changes are made add to the efficiency of the machine, and are not made simply for talking points.

I H C machines have harvested the grain fields of the world so long, have met and conquered so many kinds of difficulties and adverse conditions, that there is now no question of their capacity for cutting, binding, and saving all the grain in any field, whether it be heavy or light, tall or short, standing, down or tangled.

The time to investigate harvesting and haying machines and tools is before, not after, you buy. Ask your neighbors for their opinions of the machines they use. Some will favor one, and some another, for various reasons which may have a very decided influence on your buying, but you will find them unanimously in favor of one or another of the machines we sell.

Good binding demands good twine as well as a good machine. The strongest and smoothest is that sold by the I H C local dealer. It comes in balls guaranteed for length and weight, and is marketed under the trade names, **Champion, Deering, McCormick, Milwaukee, Osborne, Plano, International.** There are four grades of each brand—Pure Manila, Manila, Sisal, and Standard.

Let others do the experimenting with untried machines and untested twine. See the I H C local dealers handling these machines and get from them the reasons why I H C harvesting and haying machines and tools, and binder twine are the best you can buy. The I H C local dealers will supply you with catalogues and full information, or, write

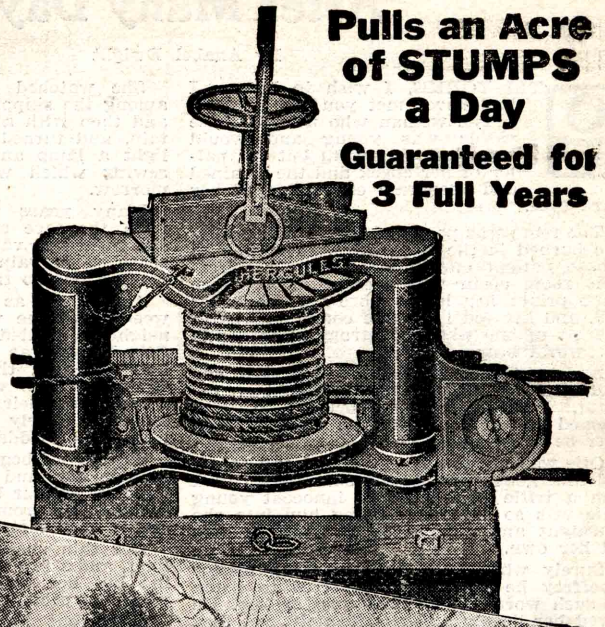
Let Me Tell You How Thousands Of Other Farmers Have Pulled Up Every Stump In Their Fields—and How You Can Do It EASY!



Pulls an Acre of STUMPS a Day

Guaranteed for 3 Full Years

B. A. FULLER

Five Minutes to the Biggest Stump

Let me send *you* my book to prove it to *you*. If you have stumpy land or stumps in your fields you're *losing big money* that rightfully belongs to you. I'll *show* you how you can turn *40 acres of stump land* into *$1281.00 profit* the very *first* year and *$750.00* every year after—by *doubling* the land value and by raising *money*-crops! The actual *photographs* and actual *letters* from hundreds of Hercules owners, as shown in my book, will *convince* you of the *necessity* of pulling out the stumps and of the *ease* with which it is *done* with the Hercules.

Send in Your Name for My Book and Special Price Proposition

You know how big a nuisance stumps are. You realize how much profit they prevent you from making every year. You know how hard it is to blast them out or grub them. I want to prove to you the superiority of the Hercules over any other known method of getting rid of stumps. And I want to make you a proposition that will be worth while for you to take up. I want you to write me—on the coupon or on a postal. I will tell you how the Hercules has won its way to the top on quality and the service it has rendered I want to show you letters from far and near—from men who own small farms and big timber-tracts. I want to show you in dollars and cents how much a Hercules means to you and I want to quote you my special price—a price I can only make to the first one or two buyers in each locality.

HERCULES All-Steel Triple Power Stump Puller

Let me tell you a few facts here, about the construction of the Hercules

All-Steel Triple Power

The Hercules is the only all-steel Stump Puller made. **It is** the only puller that has the single, double and triple power features, giving you three machines in one. There isn't a stump, green tree or hedge grown that the Hercules won't pull out without straining or breaking any castings. It's the only low-down constructed puller that has self-anchoring and stump-anchoring features—the only one with double safety ratchets, that insure the absolute safety of men and team. Let me send you a Hercules on

30 Days' Free Trial

If, at the end of that time, the Hercules isn't everything I have said it is, I want you to send it right back to me, and I'll see that you get every cent of your money back promptly. Thousands and thousands of farmers have ordered on this plan, and so far less than one out of a thousand have been returned. Besides my thirty-day free trial offer, I absolutely give you the following

3-Year Guarantee

If any casting of your Hercules All-Steel Triple Power Stump Puller breaks, any time within three years, whether the fault is yours or the machine's, I will absolutely replace any such part free of cost to you. There are no conditions to this guarantee whatever. Any casting will be replaced promptly, whether the machine breaks by accident or through any flaw in workmanship or material. Let me say right here, however, every Hercules is tested to terrific strain before it even leaves the factory, so as to guard against any machines being returned, or any parts being returned due to breakage.

The strongest guarantee ever placed on any article for farm use. Made possible only because of the High Quality of Hercules.

Mail Me the Coupon or a Postal

If you write me at once on the coupon below or on a postal, I will reserve one of these machines for you at the special price I am now making, until I hear from you whether or not you are going to buy. Understand, your request for my book is not an order. I simply want to get the book to you at once, so that you can read the remarkable facts about the Hercules All-Steel Triple Power Stump Puller and how it does such splendid work making big profits for owners everywhere. Mail me the coupon or the postal right now before you forget, or take down the name and address and write it as soon as you get a postal card. Address me personally.

MARCH FIRST, 1913

SAIL ON, THOU SHIP OF EQUITY

This illustration was suggested by a letter from B. E. Phillips, Secretary of New Bethlehem, Pa., Local Union of the F. S. E. He said, reviewing their first year of co-operation on the Equity plan: "A little more than a year ago we had several local clubs over our county. Now we have seven unions all federated in a county union and all a part of the Farmers Society of Equity. Formerly we were like little boats, manned by small crews, cruising on a rough sea, getting nowhere, accomplishing very little, but always in danger of being wrecked. Presently a large, modern liner came in view in the distance with capacity enough to take us all on board. Immediately many of the navigators proposed to abandon their unsatisfactory boats and board the liner; others protested, but finally nearly all boarded the Equity ship. The enormity of the ship and unfamiliarity with the machinery frightened some at first, but soon all became reconciled and convinced that it was the only way to reach the port for which we were bound."

BETTER CORN

No Other Corn Has Such a Record---Read These Reports Selected from Many Received

NOTE: We do not give complete address as that would divert trade from our house. Every testimonial is guaranteed genuine and the original may be seen on file in our office.

Indiana—The Farmers Interest corn is yielding 100 to 120 bushels an acre all over my field. Nothing like it ever seen in all this section before.—L. C.

Kentucky—We thought we grew good corn, but your Farmers Interest is yielding 110 to 120 bushels an acre, beating our best native corn 25 to 30 bushels an acre.—C. W. W., Breckenridge Co.

Illinois—Farmers Interest astonished us. A field of such mammoth corn ears I never saw before. I don't think there can be better. It is good for over 100 bushels an acre.—W. P. R., St. Clair Co.

Kansas—I visited my brother in Kansas and saw his field of Farmers Interest corn. I never saw its equal all my way to Kansas and return. The ears look like arms of giants. He wrote me it yielded 114 bushels an acre.—A. M. T., Knox Co., Ind.

Indiana—I grew 50 acres of Farmers Interest corn, and the yield over the whole field was 90 to 105 bushels an acre. The 50 acres yielded 4,948 bushels. Matured early; ears mammoth.—C. A. Helm.

West Virginia.—The Farmers Interest is the finest corn in this county; it beats all the rest of them. I raised 75 bushels per acre; a cyclone destroyed lots of it or it would have made 100 bushels or more. Everybody wanted seed.—B. P. B., Woodland.

Indiana—I had three varieties of corn this year and found Farmers Interest my best and it was on my worst ground, being in corn last year. I always get highest price for F. I. It is the yieldiest corn I ever grew.—C. B. D., Orleans.

Kentucky—Farmers Interest is far ahead of any other corn I ever saw.—B. P., Chilton.

Oklahoma—There is nothing better than Farmers Interest. Farmers should not stand back because the seed cost is a little high. It is cheap at any price. Don't fail to try some of it and you will not regret it if you plant your whole crop of Farmers Interest.—C. M. B., Jefferson Co.

Tennessee—I can make from two to three times as much corn with Farmers Interest as any other kind. It is the best filled corn at the tips I ever saw. I won first prize on quality corn in Lincoln County.—Carlton McD, Lincoln Co.

Tennessee—I planted ¼ bushel of Farmers' Interest corn on one acre of ground and it yielded a little more than 100 bushels. It yields more than one-third as much as my other corn. It is superior to any corn I ever planted. It is nearly all uniform style. I can say it has but few equals and no superiors.—Carl Mallard, Humphrey Co.

Tennessee—Farmers Interest beats other kinds 30 to 40 bushels an acre. It is as far ahead in appearance and quality as it is ahead in yield. I can say it beats anything in the corn line I ever saw.—E. C. H., Cumberland Gap.

Tennessee—I planted 20 acres of Farmers Interest corn and it is the best I ever raised. It is ahead of all others in appearance, quality and value. It will yield more on fertile lands or in dry season than any other corn.—G. S. T., Davidson Co.

Virginia—I planted ½ acre of Farmers Interest corn and it yielded fine. I can say it gave me a better crop than any other corn I ever tried. The ears filled out the end just fine.—A. M. Lacey, Campbell Co.

West Virginia—One acre of Farmers Interest corn gave me 75 bushels yield. This was twice as much as my other corn yielded. I think it will prove to be the finest corn that was ever in the country.—G. W. H., Wise County.

What do all these farmers' reports mean to you? Do you get yields like they report? Do you want such big crops? Don't fail to send for our Corn Circular; it describes other high bred corn that we sell. You may prefer a yellow corn. This circular will give you full information. It will pay you big to plant your entire crop of Farmers Interest.

Missouri—I planted 6⅛ acres of Farmers Interest corn and the yield was about ½ better than another variety of white corn. It is ahead of all in quality and value.—J. M. G., Nodaway Co.

Missouri—I planted 4 acres of Farmers Interest corn which yielded about 1-3 more than any other.—I. R., St. Clair Co.

Ohio—One acre of Farmers Interest corn produced 75 bushels. I think this corn is alright and a good yielder.—W. V., Washington Co.

Ohio—I never saw anything in the corn line like Farmers Interest.—Harry A. Miller, Franklin Co.

Ohio—The Farmers Interest is the best corn. D. D. Landis, Miami Co.

Ohio—I bought a peck of Farmers Interest corn in 1911 and from ½ acre it yielded 70 bushels. This year I planted 22½ acres on very high hill ground. The yield was as good as we had in the country. We raised 15,000 bushels of corn this year and the Farmers Interest was the finest of all. Every one that has looked at the corn says it is the finest they ever saw. On this 22½ acres we had a yield of 80 2-3 bushels per acre.—J. I. Winner, Athens Co.

North Carolina—The Farmers Interest corn is a very pretty corn and is far the best corn in the country. It was much better than any other variety of corn I planted.—J. Brown, Northampton Co.

North Carolina—Farmers Interest is far superior to any other corn and out-yielded the others 15 bushels an acre. I consider it the best I ever raised.—W. R. Jenkins, —Guilford Co.

Alabama—It is the finest corn I ever planted.—W. O. H., Franklin Co.

Alabama.—I never saw the like in my life. Farmers Interest grew 12 feet high and ears like a churn.—W. L. McGahey, Clarion Co.

Georgia—Farmers Interest is fully 1-3 ahead of other varieties I raised on the same kind of land.—C. W. Harvey, Catoosa Co.

Arizona—Farmers Interest corn more than doubles the other varieties that I planted. On account of it standing the hot sun better. I grows much better than the other varieties.—J. S. Russell, Gila Co.

South Carolina—Farmers Interest corn is far better than any other varieties and about 20 bushels more to the acre. It is a fine yielder.—W. F. Hodges, Colleton County, S. C.

Missouri—I consider Farmers Interest corn far superior to others. I am well pleased with my seed and treatment of the O. K. Seed Store.—C. I. Godwin, Polk Co.

Indiana—My Farmers Interest corn is the best corn I ever raised.—W. E., Martin Co.

FARMERS INTEREST is the Highest Bred Seed Corn in the World

If you want more corn and better corn you must look to the seed. A few dollars invested in Farmers Interest Corn will return the investment many fold in the resulting crop. Read in the other column what others have done.

Get 100 Bushels to the Acre

It is done every year with this corn. Read the testimonials. What is not in the seed you can not bring out in the crop. Plant this productive seed corn for big crops. This corn has taken more prizes than all other kinds together.

Largely because of this variety Indiana's corn yield in recent years has averaged 20 bushels an acre more than Kansas, 15 bushels more than Nebraska, 6 bushels more than Iowa, 16 bushels more than Tennessee, etc. Indiana raises more corn to the acre than any other state.

Farmers Interest White Dent Corn

has been bred for improvement for 17 years. Every farmer who sends for some of this corn will at once reap the benefit of all these years of labor by expert corn breeders.

If you want large crops of corn; if you want a big price for seed corn, plant this corn in 1913. We advise prompt orders.

Mr. C. P. Hartley, physiologist in charge of Corn investigation, the Department of Agriculture, Washington, D. C., said: "Improvement of the quality of seed is the **least expensive** method of increasing the yield per acre," and "well conducted corn breeding requires **special methods** that general farmers have not time to apply. * * * The general farmer is a propagator rather than a breeder of corn. He **profits** by the careful **work** of the breeder by **adopting the higher yielding strains** and propagating them. Corn breeders are improving corn as cattle breeders have improved cattle. **Five Dollars a bushel will be a profitable bargain for both parties for such corn.**"

The photograph shows one bushel of Farmers Interest Corn; 56 ears weighed 70 pounds and when shelled weighed 58 pounds.

DESCRIPTION—Color, white; class, dent; ears, large, uniform diameter and rounded with grains at both ends; about one-fifth the weight of dry ears is cob, four-fifths corn; cob white, medium size; grain deep, often grains measure three-fourths of an inch long; a strong grower, roots strike deep and wide; stalk tall and thick; often two ears are borne on a stalk; season about 110 days; withstands dry weather and winds remarkably; territory, adapted to all the corn belt south of the 41st parallel. Corn growers over a wide territory find in Farmers Interest their ideal variety. We believe it is to the interest of every corn grower to embrace our offer and start with this corn this year. Read the testimonials from growers about its great yielding qualities.

Price: Farmers Interest is carefully grown and selected, and handled for seed. It is shipped graded and ready to plant. We have a special introductory price. Write today for this special price. You can afford to plant your entire acreage of Farmers Interest.

O. K. Seed Store

Dept. 9, Indianapolis, Indiana

For 33 years we have been introducing new and improved varieties of field and garden seeds.

READ THESE REPORTS:

Iowa—On 28 acres I raised 2,430 bushels of Farmers Interest corn. It's the finest white corn in this section.—C. F. Pearson, ———, Co.

Maryland—Farmers Interest corn has taken our section by storm. It is the greatest ever seen here.—S. B. O., Prince George, Co.

Kentucky—Farmers Interest corn yielded about one-third more than other corn. It is A1 in quality and much better than the other corn I planted. The ears were large and were filled out at the end.—J. N. G., Boone Co.

Illinois — The Farmers Interest corn was ahead of all other varieties I raised this season.—G. A. L., Jasper Co.

Illinois — The Farmers Interest made about 10 bushels more than yellow corn we had to the acre. I will plant almost all my corn with Farmers Interest.—F. W. W., Mason, Co.

One Bushel of Farmers Interest Corn, 56 E ars, weight 70 pounds.

What the Tariff Is and Means

A Fair Discussion of the Great Question: "What We Say Unto One, We Say Unto All, Watch!"

THE two leading parties try to make the tariff the paramount issue between them, and, as was to be expected, the party now coming into power is giving that question its principal attention. The tariff is simply a tax or duty charged for bringing certain commodities from other countries to be sold to the people of this country. It is claimed that the commodities on which the import duties are charged can be manufactured or produced in other countries and sold to the people of this country for less money than it costs to manufacture and sell the same commodities here, and the purpose of the tariff is to compel goods or products shipped into this country from other countries to be sold here at least that much higher than they otherwise would be. This enables our own manufacturers and producers to sell their goods at higher prices than they could if the foreign goods had free competition with them. If that is so, it would seem to be better for the people in general who buy and use those commodities, if there was no tariff at all, and that would be free trade.

But there is another view. If our people can not produce or manufacture the goods cheap enough to sell in competition with imported goods, and since it is human nature, and human wisdom in fact, to buy supplies at the lowest price, our people would supply themselves entirely with the foreign-made goods. That would stop the manufacture and production of those commodities in this country, and it would result in a loss of the capital invested therein and throw out of employment the thousands of our people who are engaged in that kind of work. That, it is claimed, would greatly reduce the demand for commodities produced by other thousands or millions of our people, farmers for instance, who are not so employed, and that our entire people can better afford to pay the higher prices the tariff makes possible than to suffer the calamities that it is alleged would follow its abolition.

That is a fair and unprejudiced statement of what the tariff is. But there is connected with it yet another feature. Our national government must have millions and millions of money to meet its proper and necessary expenses, and it expends other millions that can scarcely be regarded as necessary, much that is not even proper. This money must in some way be drawn from the people. As the laws are at present the principal part of that money is derived from the tariff. The duties on imports are turned into the United States treasury as public revenue. Of course, the people pay it in the higher prices the tariff permits to be charged on the commodities so protected. It is truly a tax on the people, but it is an indirect, not a direct tax. Those who use the protected commodities are the ones that pay it.

There is another phase of this tax, however, that is seldom considered. Not all the increased price the people pay goes into the national treasury. As we have already stated, the avowed purpose of the tariff is to enable our home people to charge more for their stuff than they could charge if there were no tariff. That is what constitutes the protection. But that addition to their prices goes into their own pockets or may be paid out to higher priced labor than produce like goods in foreign countries. It is only the duties on imported goods that go into the national treasury.

With this understanding of the tariff it is not difficult for the unprejudiced mind to arrive at a just and equitable conclusion concerning it. The duties should be such as to prevent foreign countries, whose internal conditions may be different from ours, from injuriously competing with our enterprises, investments and labor. But it is a notorious fact that at least some of our present duties are outrageous, so high, in fact, that the beneficiaries of them can send their goods abroad and profitably sell them in other countries at prices lower than they compel our own people to pay. These rates make startling accumulations of wealth in the pockets of a few of our people, but they add nothing to the public revenue, because such rates prohibit the importation of such articles, and, therefore, no import duties are paid. Such rates as these, of course, should be reduced to an equitable basis. In fact, the whole schedule should be brought within the pales of equity, so as to be fair and just to all, and protect all alike.

In this we would certainly include farm products, which have always had less protection than manufactured goods. In these products there is danger of hurtful competition from the north of us, and also in live stock, meat products, hides and wool from the distant south and southeast. We ask nothing but fairness and such protection as will be just when compared with that extended to other things. Farmers are compelled by the tariff to pay higher prices on almost everything they must buy, and it is but fair that similar protection should be extended to them. It behooves farmers to watch this part of the tariff work. Only very recently the advocates of the highest rates on manufactured goods made a most strenuous effort to remove all protection from farm products. A few of our people saw through the scheme, and UP-TO-DATE FARMING led the opposition to it. It failed ingloriously, the foreign country itself coming to our rescue; and in a very little while President Taft may have time to look first at Vermont and then at Utah, and wonder what it is all about. But the House leader of the party now going into power favored the measure, and "What we say unto one we say unto all, WATCH!"

Many Efforts to Benefit Farming are Failures

IN THIS period of apparent craze for "expert" farm benefits it is gratifying when anyone takes a cool, common sense view of the situation. In a recent issue of the Progressive Farmer, published at Raleigh, N. C., and edited by such distinguished men as Clarence Poe, Tait Butler and W. F. Massey, we find the following in a very able editorial on the subject:

The model or demonstration farm, as a means of educating the farmer, or for the purpose of spreading agricultural knowledge and developing better agricultural practices, has always been a failure and will of necessity continue to be such.

The idea is fundamentally wrong, and had its origin in a false conception of the manner in which good farming is attained. But even at this late date, however, there are those in public places who, knowing nothing of agriculture, either as to the science or the practice, still advocate the model or demonstration farm as an educational institution.

The state can have only two valid reasons for maintaining farms. Such a farm must be used as a laboratory is used, to teach agriculture, or it must be used to find out new facts about agriculture. When we say new facts, we really mean new facts, and not facts which may be new to the uninformed only.

When are farms, run by the state as laboratories for teaching, justifiable? When the numbers who use them are large and when those who do visit them actually use them for studying agriculture. In short, such farms are only justifiable and of great use in connection with agricultural schools or colleges.

Farms, maintained by the state as model or demonstration farms, are not of sufficient use or value to justify the cost of maintenance, and no one who has given thought to the subject, or who has knowledge of the true basis of correct agricultural practice, or who has observed those established in the past for this purpose will longer justify the state in maintaining such farms.

That is no more than a plain and unvarnished statement of an incontrovertible fact. Many really good and progressive people, students of the mysteries of the hidden world, conclude that their methods of study applied to agriculture would certainly be a powerful uplift to that great calling. They bring the matter before the chosen rulers of the states and the nation. These rulers are also friendly to the farmers, and wish to aid them, or, at least, to win their favor, and they readily accept the ideas of the "experts" who have done their farming in their laboratories or garden plots. Neither they nor the average lawmakers have any more practical knowledge of actual farming than has the man who never did anything with stock except to play with a calf when a child, of how to manage a full grown leader of the herd. But the propositions presented seem good to them, and appropriations are freely made to establish institutions that must, so far as real farm progress is concerned, as declared in the quotation above, be failures and will of necessity continue to be such.

Don't misunderstand us. We believe both state and nation should aid and encourage progressive agriculture, but they must do it in a **practical** way. Chimney corner farming never did accomplish anything, and it never will. What is done must be done in the fields, and it must combat the agencies that there interfere with success. And not only so, it must continue its work even beyond the production of the crops. Success comes with the money the products bring, and the farmers have more to contend with in the marketing than in the production. We are glad these subjects are at last coming properly before the people.

About Money

AS YET no dire calamity manifests itself as a result of the change in administration. At the close of January, 1912, there was a national deficit of $22,357,799. The close of January, 1913, showed this deficit entirely wiped out, and instead of it there was an actual surplus of $5,414,635. The receipts last January reached a total of $60,542,363, which was $8,000,000 more than the receipts of January, 1912. The customs (tariff) receipts increased $5,000,000 and the internal revenue receipts increased $2,500,000. The disbursements last January were about the same as the January before, $53,605,790.

It may be somewhat significant that during January the number of national banks was increased to 7,483. The circulation of these banks February 1, 1913, was $729,931,621, which means that the United States government has printed that much in bank notes and has given it to these banking corporations to loan to whoever wishes to borrow, and to circulate as money. These notes are not money, but only the promises of the corporations to pay money, the same in reality as the written and signed note of an individual or company of individuals would be. But in this case a law adopted by Congress authorizes these notes to circulate as currency, and to make them acceptable to the people the government stands as security for the banks and guarantees the payment or redemption of the notes at some time, no time of payment being specified. It amounts to the same thing as the government giving the corporations that much money to loan to people who may be in need, at whatever interest may be exacted from them, or to use it in the purchase of property or in any other business in which the corporation may engage. It is well to know, though, that while the government guarantees the redemption of the notes it does not guarantee the return of deposits of money that may be put into the banks.

But what do the banks do for the government in consideration of these valuable special privileges and the presentation of this great amount of currency? In the first place they must buy and deposit with the national authorities United States bonds to the amount of the notes given them for circulation. These bank notes are not a payment on the bonds, the government still owes the bankers every dollar of the bonds and pays the specified rate of interest thereon, and ultimately must pay to the bank every cent of the face of the bonds, with the exception only of such of the bank notes as the government may be required to redeem. For printing and furnishing the notes the banks pay the government one cent on the dollar of the notes furnished. The money the bankers pay for the bonds is an investment on which interest is regularly and promptly paid, the principal itself also to be paid in full. The notes, therefore, are a free gift to the banks, an actual doubling of the bankers' capital, with the exception of the one per cent. mentioned above. Is it any wonder there is a money power, a money trust, or corporation control of the money of the country? This, however, applies only to national banks, not to state banks; the latter issue no currency.

While discussing this so-called paper money, whence it comes and the privileges under which it is issued, it can not be out of place to consider briefly the money metals, for under our financial system nothing is considered real money but gold coin. Silver coins circulate, but the law regards them only as subsidiary coin. During 1911 (we have not the figures yet for 1912) the entire world's total production of gold was $467,449,600, that is, if it had all been coined into United States money. Yet this gold production of the whole world is but little more than half what the national banks are allowed to circulate in this country in paper money! The total production of gold in the United States during that year was $96,233,500, which is only about one-eighth of what the national banks circulate in paper.

From the above it is evident that to do the business of this country we must have paper money, but why should a few persons organized into corporations be given the privilege to make and circulate this paper at a cost to them of one cent on the dollar, **when the constitution expressly prohibits any person or power on earth from making money but the government itself?** Why not the government issue it as the Constitution says and the Supreme Court has decided it may, and as it once did, and pay it out in liquidation of national expenses, thus saving at least some of the enormous taxes required to be paid, and keep the control of the money in the government instead of delegating that control to a wealthy few who thus control the entire business of the country, and make ninety million people their financial slaves? Why must our rulers do that?

The Futility of It

WE WATCH with keenest interest every effort made by farmers to control the production, sale and price of their products. Since we began to agitate this important question in the interest of farming many efforts of this kind have been made. In some places neighborhood producers of certain crops have combined to control those special crops. In other places counties have so combined, and in a few cases even states have taken up the question, we mean of the farmers in the states not the state governments, and have united more or less to control certain crops. As we have said, we watch these movements with great interest, for we want them to succeed. Of course, they are not quite along the lines we have recommended and even urged, but we regard every success a herald of victory, and victory is our ultimate hope and aim.

Some good has been accomplished by these efforts. There can be no doubt about that. The agitation that resulted in both production and business circles has been good. But the futility of these single and separate efforts cannot but be observed. A neighborhood, a county or a state may take action, and effective action, if you please, but all the other neighborhoods, counties and states are continuing in the old way, and inevitably neutralize the efforts made by those who take action. Buyers are not confined to particular localities, and whenever they note a united effort to control price and marketing they promptly turn to other producing localities. And when production is limited by an agreement, adjacent regions increase their production to benefit, as they think, by the reduced production near them. This is unfair and unwise we admit, but it is human nature, and people unorganized or unobligated will do it. They have done it in the past, and they will continue to do it. We need offer no proof to those who have engaged in such efforts. Their own experience is the proof. We could cite examples, but that is unnecessary.

Again, efforts that apply to but one crop are handicapped. Should that crop be actually redeemed from the curse of the dumper marketing system, all the other crops are out in the cold, so to speak, and the producers of them are jealous and unsympathetic with the crop that is successfully handled. Not being in sympathy with it, their influence is against it, and very soon all outside of the combination will be its enemies.

Besides, it is only a partial success at best. But few farmers are engaged in the production of a single crop, and those who are in the combination, however successful, will note the dumper effect on all else they produce, and they will thus become dissatisfied and turn their backs upon the work. We are not theorizing in this. It, too, is a matter of human nature, and experience has proven it whenever there has been a test.

Are these things discouraging to those who would have a better marketing system and better control by farmers of the business of farming? Not at all. It rather proves that such control can be accomplished to the inestimable benefit of those engaged in farming. But it will take a national effort to do it, and it must include all crops in the same movement. We do not mean that every farmer in the United States must be in the movement before success can be accomplished, but the effort must apply to the whole country and it must include all the crops grown for sale, and there must be enough in it to control the business. Consider a National Department of grain growers, of cotton growers, of tobacco growers, of live stock growers, of fruit growers, of poultry and dairy workers, etc., covering every commercial product, and these different departments all auxiliary to a national organization. It is easy to see that farming would immediately assume a BUSINESS basis, and the reforms we have so long labored for would be accomplished. It is entirely practical, and we have time and again elucidated the plan.

DEMONSTRATION FARM FAILURES

WHY has the model or demonstration farm been a failure, and why must it ever remain such, asks one of our most progressive exchanges. It then answers its own question in language most convincing. The farmers will not and can not observe its operations often enough and close enough to obtain information at all commensurate with the trouble and expense of visiting the farm and the public expense of maintaining it. Some of those visiting the farm will be benefited, but the vast majority can not visit the farm, and many who do can not study the work closely enough to make the farm of material value as an educational institution, and most of them will discount what they see because it is done under conditions which they can not duplicate—conditions different from their farming at home.

The fact is, it is seldom that like conditions exist even on adjoining farms. This makes it necessary for each farmer to study his own farm, and, for verification, those of his neighbors. What an argument there is in this for organization. If the farmers were organized and held stated meetings, these conditions could be discussed from practical standpoints, and all the farm problems could be brought up for consideration and solution. For real progress we would rather have a local union of the Farmers Society of Equity, for instance, in a neighborhood than a demonstration farm.

Mr. Dooley on the Peach Crop

"Good mahrnin', Hinnisy!"

"Good mahrnin', Misther Dooley! I wish ye a large an' rayspictable mahrnin' an' many iv thim."

"Thanks, Hinnisy. I nade iv'ry thing that's comin' to me iggsipt th' schmallpox an' scandal. I've bin radin' in th' payper about that suffragit payrade down in Washington th' third iv March an' if me ould harrt wusn't so ould, I'd be hittin' th' rails f'r Washington. They till me that this mon Wilson is a great hand f'r hittin th' troosts. He's as hard a hitter as Pressydint Taft, avin if he lacks his weight."

"What do yez think of what th' Prissydint done to th' cash reggister troost whin he sint all th' heads iv th' daypartmints to prisin f'r a little saylict pahrty?" asked Hennessey.

"That's wan shtep toward th' bittirmint iv conditishuns. Whin this governmint iv ours foinds out that it can take a singie shtep, thin it will take anither an' anither an' prisintly it will be walkin' alone an' avin whistlin' as it marches along. But, Hinnissy, before th' govirnmint can shtand alone, iv'ry mither's son iv us must learn to shtand alone too on his own fate instid iv lanin' on th' cahrns iv his neighbors.

"Jist to illyshtrait. A friend iv mine lives down in th' Shenandoah valley. Last year he raised tin thousand baskits iv paiches. A mon frum Bawltymore inshpicted th' crop an' sez, 'I'll give ye a dollar f'r firsts, sivinty sints f'r seconds, an' forty sints f'r thirds, daylivered in Bawltymore. Whin th' mon got back to Bawltymore he found th' markit wus flooded with paiches frum Georgy, so he immejutly 'welched' on his trade. He sed that 'firsts should be thray inches in diameter. This threw all th' paiches into th' third class. He'd a made tin sints a basket on thim if he'd daylivered 'em in Bawltymore.

"What did he do thin? He wrote to th' commishun min. 'We won't buy,' sez they, 'but we'll handle yer crop on a commishun iv tin per sint.' Thin th' railroads put on a big proice, an' they wouldn't foornish him ice-box cahrs. At last whin he wus about bald-hidded, he sint th' paiches by ixpriss. What did he git out iv it, Hinnissy? Five an' a half sints on a baskit on his first shipmint an' fifteen on his second, not countin' th' iggspinse iv pickin', packin' an haulin'.

"Wan iv this mon's friends in th' city bought a baskit iv these paiches an' he had to pay a dollar an' a quarter f'r it. Jist take fifteen sints frum a dollar an' a quarter, Hinnissy, an' ye'll have a good idea iv what it all manes. Paiches is paiches, Hinnisy, whin they ain't limmons."

Editorial Paragraphs

30,000 and 30,000—In a sworn statement of the condition of a national bank in a thriving country village, we find these two items: Capital stock (invested in government bonds), $30,000; circulation (the bank's own notes), $30,000. The clauses in parenthesis are not in the statement, we insert them merely as a matter of explanation. The important fact is that the bank invested its $30,000 capital in government bonds which it still owns, for on the other side of the statement given as an asset is "U. S. bonds, $30,000." Yet the bank still had the same amount of money it paid for the bonds to put in circulation and use in its business. For many years and almost everywhere people have laughed at the child who bought a cake, and wanted the cake and money both. How is that bank transaction?

Want a Change.—Farmers and other industrial citizens of Idaho have memorialized Congress to change the national banking system so as to abrogate the gigantic privilege conferred upon the corporations of issuing their bank notes as currency. They also favor the adoption of a graduated income tax.

Should the People Rule?—The liquor traffic is a great question. There are laws that prohibit the sale of impure food, and of articles which are not what they are represented to be. Poisons are not allowed to be sold except under the strictest regulations. Many believe that the sale of intoxicating liquors is more harmful to the human race than the sale of impure food or drugs, and many localities and entire states have, by vote of their people and legal enactment, prohibited the sale of these liquors within their clearly defined borders. But in spite of the will of the people thus expressed liquors are shipped into these states and districts and sold in defiance of the people. The Kenyon bill now before Congress prohibits the shipment of intoxicating liquors from other states into states or parts of states that have thus prohibited their sale therein. The liquor interests, of course, make great profits in the sale of these liquors, and they defy the majority and the appeals of humanity rather than give up these profits. They are, therefore, fighting the Kenyon bill, and many of our chosen rulers dare not antagonize the liquor interests. It is claimed the bill would pass the Senate, where it is now pending, if it could be brought to a vote, and the effort of the opposition is to prevent its being voted on. We believe the people ought to rule, and that the laws should protect them therein.

Bogus Butter—It is claimed unequivocally, and very positively by one of the most prominent publications that come to our table, that the present commissioner of internal revenue, in his official capacity, favors the oleo makers, and disregards the laws that protect the makers of real butter, the dairy interest of the country. The law permits the commissioner to use his judgment in settling cases arising under the revenue laws, and it is asserted that his decisions are almost invariably favorable to the oleo people. Isn't it strange that in a country like ours so many of our high officials pander to the few and deal unjustly with the many? Less than two score concerns are engaged in the manufacture of bogus butter, and these, it is claimed, are are officially favored against the millions who make real butter. Farmers, what do you think about it? Isn't it about time for you to get in position so you can talk to the big fellows?

Compare Them—Up-to-Date Farming is wedded to nobody, and it is tied to no special interest. It discusses plainly and freely all the great questions that are of importance to our readers and the great masses of the common people, whom the renowned Lincoln so delighted to serve. Compare this paper with any others you read, and see if we are not plainer and more outspoken in this regard than any other. You appreciate that, don't you, for you know it is for the general good. Don't you wish your neighbors could have its benefits also? Often a single word from you would induce them to subscribe and that would benefit both them and us.

Thank You—A highly appreciated friend writes: "After UP-TO-DATE comes we never go to bed these evenings until every article in it has been read aloud in the family." That family is a leader in the neighborhood where it lives. We say that without a particle of doubt; and the boys and girls growing up in that family will be leaders in the world. We are old enough to know how such things work.

A Glimpse Into the Future

IT WAS in the year 1950. There was a general parcels post and all hardware jobbers and middle men had been "eliminated."

I was curious to see how the new order worked and here are some of the things I saw. Small merchants had gone back to farming or moved to the large cities and were working for mail order houses. The small town had disappeared from the face of the earth.

Jobbing houses had all gone out of business or had consolidated with each other and formed enormous mail order houses, selling direct to consumers. At first there was a great trade war between all the mail order houses in the large cities. This war led to a terrible financial panic in the country. Thousands of retail merchants failed. The government restored confidence by amending the Sherman anti-trust law and then—under government supervision—the great mail order houses arranged selling prices with each other. No one mail order house was allowed to do over one hundred million dollars in business per annum.

Manufacturers soon found that they were almost powerless in the hands of mail order houses. If they did not get in line these houses manufactured their own goods. It was understood that the great financiers and the mail order houses were working together and having secured all the trade of the country now controlled the government. The president of the United Mail Order States of America took his orders from the executive committee of the mail order combine.

The country had been divided into trade zones and under government regulation—the government having been previously regulated—one mail order house was not permitted to ship any goods or mail any catalogs into the trade zone of another. This saved waste and duplication of effort.

When the jobber was first eliminated by the retail trade buying direct from the manufacturers all of the smaller retail merchants had to go out of business, because they could not buy enough of each line of goods to make shipment from each of the various manufacturers. This, together with mail order house competition and parcels post, threw all the retail business into the hands of the largest class of retail merchants in the great cities. This class of retail merchants did well until the jobbers, having become mail order houses, started the great national war for trade—this fight soon cleaned out even the largest retail merchants, as it was found the manufacturers were owned or controlled by the mail order houses.

These interesting results quickly followed:

Business was so much centralized that no single man could raise enough capital to go into business for himself.

All individual opportunity had been wiped out.

An executive committee of six in New York controlled all the money and all the trade in the United Mail Order States of America—also the government. No new bank or new business could be organized anywhere without the consent of this committee.

In the zone cities practically all of the inhabitants worked for the mail order houses or in the factories that made goods for them. The cities were divided into neighborhoods and people lived in locations and houses according to the positions they occupied in the mail order houses. This was good system and as a man was promoted in business his family rose in the social scale. Great care was given to all the minutest details of organization and the social standing of each mail order employe was carefully regulated.

As most of the small towns had been eliminated, farmers at first had to haul their products a long distance to the zone towns, as the railroad trains quit stopping every few miles, but later, double tracks were laid by the government to every farm. Then an electric car system did away with the old rural free delivery as the government not only delivered all goods to the farms, but also carried everything from the farms to the cities, where they supplied the employes of the mail order houses with farm products.

All mail, up to eleven pounds in weight, was carried by aeroplanes. Over each farm house was a chute into which the aerial postman would drop the packages by only slowing up a little. This chute delivered everything on the farmer's kitchen table.

It was unnecessary for anyone to go to church, to theater or an opera, as by means of the combined telephone—graphophone-moving-picture machine, all could sit in their own homes and hear sermons and see and hear all the great plays and operas.

There were no country roads, as everybody had automobiles or rather private cars that ran on rails and were propelled by gasoline. These cars ran on the double track government railroads.

Every house had a long distance telephone so supplies could be ordered from day to day by telephone from the mail order house to be sent by rail or aeroplane.

About this time it was decided, by the mail order city people, that the farmer was getting too much for his products and that he wasted too much time; in a word, that the farmer system was uneconomical. So the mail order houses established agricultural colleges of their own, trained farmers to farm scientifically, bought farms of 1,000,000 acres each and thus saved the farmer's profits on all they raised.

There was no one else to buy from and the farmers were just figuring out what to do when my alarm clock went off and I woke up.—Mike Kinny, in The Gimlet.

FAMILY PETS IN HOME OF SUBSCRIBER W. L. SAGE, LAVILA, IA.,

Get More Money

Read "The Problem of Marketing Crops," beginning in this number.

Complimentary

"I am writing to Senator Beaupod's home paper. What can I say of him?"

"Say he has always proved faithful to his trust."

"But what trust, steel or beef?"

A Practical Tide

"Pa, you know the saying 'There is a tide in the affairs of men that leads on to fortune.' What kind of a tide is that?"

"It's being tied to business, my son."

Had to Kill It All

Guest, impatiently—How long must I wait for that half chicken I ordered?

Waiter—Until somebody else orders the other half. We can't go out and kill half of a chicken.

Would Make Improvement

"Mr. Twist, I want permission to marry your daughter."

"Will you promise to keep her in the way she is accustomed to?"

"Oh, no sir, I will be better to her than you have been."

To Get Up With the Lark

Sue—Don't you wish you was as happy as a lark?

Prue—No, indeed. Just think how early they rise.

Smile Awhile

Lack of Men

Happy Wife—I wonder why there are no marriages in heaven.

Old Maid—It is because there are no men there.

Not Her Own Work

He had married a city girl and they had moved to their nice little home in the country. After the second week she said: "John, dear, what would my folks say if they knew I am doing my own work?" "Whose work do they expect you to do?" was his conscientious reply.

Rather Weak

Wishing to be social the keeper of the restaurant said as she handed the coffee to her guest: "It looks a little like rain, don't it?" "Yes," replied the guest, "but it has a little of the smell of coffee."

He Favored It

"Mike, I'm going to make you a present of this pig."

"Thank you, sir. It's just like you, sir," said Mike.

Had Dropped Out

"Do you believe all men are created equal?"

"I used to, but I don't now."

"How is that?"

"Since I was married I have learned I am not near equal to other women's husbands."

That Was the Trouble

Uncle John, to little Ethel, who had just finished an elaborate Christmas dinner.—What is the matter, my dear, you look mournful?

Ethel—That is just it, Uncle John, I sure am more'n full.

Kept Three Busy

"How many servants do you keep?"

"Three."

"I did not think you needed so many."

"We keep one going, one here, and another coming."

As He Understood It

Teacher—Bobby, form a sentence containing the word "damper."

Bobby, after some earnest thinking—Paw says maw is too damper ticular about him wipin' his feet.

Had His Preference

Auntie—Willie, an angel brought your mother a nice little brother last night. Wouldn't you like to see it?

Willie—I don't care about the brother, but I'd like to see the angel.

No Fault of His

Mother—Tommy, I put three pies in the pantry yesterday, and I don't find but one this morning.

Tommy—Please excuse me, mother; it was so dark in there I didn't see that one

They Were Disposed Of

Grocer—How did you like the apples I sold you yesterday?

Customer—They were not fit to eat, and I had to give them to the children.

Didn't Increase His Offer

He was out late, and his wife was rather frowny and had nothing to say at breakfast next morning.

"A penny for your thoughts," said he good naturedly.

"For two cents I'd tell you what I think of you," was the tart reply.

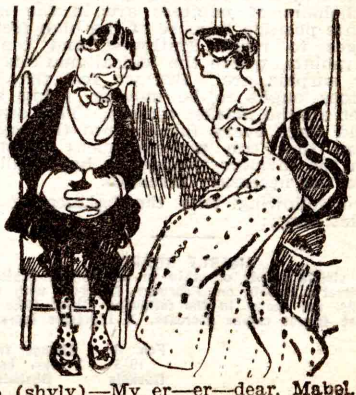
But he didn't offer the two cents.

Everything Has an Advantage

House Hunter—I don't think I'd like to live in this house. It seems damp.

Owner—Yes, but if it should get afire it wouldn't burn up so fast.

Sure



He (shyly)—My er—er—dear, Mabel, do you er—er—love me?

She (quickly)—Yes.

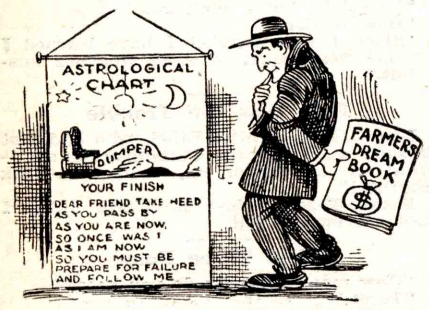
He—Your frankness is engaging.

Crop Prospects *and* Market Reports

Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

MARCH is usually considered a spring month, although, according to the almanac, spring does not really commence until March 21st. This winter will go into history as a remarkably mild one unless real winter weather is yet lingering in the lap of spring. At present the crop prospects, and we refer to winter wheat and grass in the north and early fruit and vegetables in the south, are good. Rains have been general and the ground is in good condition for giving spring crops a good start when planted. Marketing of grain has been free, as it usually is at this season just preceding the busy time in the fields. This has held the wheat visible decrease to a very small amount and causes us to record an increase in corn of nearly 4,000,000 bushels. Oats also increased liberally, against a decrease in the same period last year. The corn and oats visibles are not large, but still enough to hold prices down. The prices of grain were also affected by the liberal marketing, as the figures show. We expect the loss to be recovered in a short time and look for higher prices for all grain. Good seed corn is plentiful this spring and



can be obtained at moderate prices, which is in strong contrast with a year ago. Compare cash and future prices of wheat and prices of spring wheat with winter wheat These are some anomalies that should not be. We take from the government "Crop Reporter" for February this about variations in prices:

"Of the forty different agricultural products, the prices of which are obtained monthly by the Department of Agriculture, cabbage varies most widely in price. For the entire United States the average price paid to producers, on January 15, was about $1.26 per 100 pounds. This average is based upon reports of correspondents from 778 towns, representing every State of the Union. The lowest *average* for any State is 24 *cents per* 100 *pounds for New York;* the highest average is $3.33 per 100 pounds for Alabama. The average of 24 cents per 100 pounds in New York is based upon reports from 23 towns, 8 of which returned 15 *cents per* 100 *as the average;* no quotation was above 50 *cents per* 100 *pounds.* In the adjoining State, Pennsylvania, the average price was about $1.60 per 100 pounds, not one of the 23 reports received being under $1 per 100 pounds. Here is an average difference of $1.36 per 100 pounds in the average price paid to producers of cabbage in two adjoining States."

No other business could possibly survive with such an abominable condition obtaining. One-fourth of a cent a pound, $5.00 a ton, does not begin to pay the cost of production. The only way farmers can continue in business and have one crop or more sell below cost each year, is because they can eat enough cabbage to live on and scrape up enough money from eggs and odds and ends to pay taxes. Too often the main crops are sold at a loss.

We notice a "weakness" in the potato market. Unless the 1912 crop has been scandalously overestimated there is a great quantity back in the country to sell yet. We again advise *our subscribers to sell.* This to apply to all sections where potatoes are in surplus supply yet. Northwestern holders of potatoes are in the most delicate position because of the high freight charges to reach southwest and central west points, where the logical markets for their surplus are. But we feel that the potatoes ought to be moving, geing sure to get all the market affords. This season should force every farmer into the organization that can prevent such condition, when the farmers themselves have built it up to the necessary strength.

The following tells the balance of the market story:

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on February 8, 1913, with comparisons, are shown in the following table: (The sign —before figures means decrease, X indicates increase.)

	Feb. 8 1913 Bushels	Change from 2 wks. before Bushels
WHEAT	72,163,000	— 263.000
(	15,417,000	X3,817,000
(	14,703.000	X1,154,000
BARLEY	5,926,000	— 187,000

Change same period last year. Bu.	Change from a year before sjeusng	Change from 2 yrs. before Bushels
—1,866,000	X6,619,000	X19,440,000
X 4,865,000	X2,860,000	— 3,673.000
X 722.000	—3,048,000	— 9,350,000
— 65.000	X2,380.000	X 3,707,000

The visible supply of wheat in Canada on the same date was 47,079,000 bushels. This is 913,000 bushels less than two weeks before and 1,461,000 bushels more than a year before. The visible supply of oats was 8,660,000 bushels on the same date, which is 90,000 bushels more than two weeks before and 2,277,000 bushels more than a year before.

CLOSING PRICES OF CASH GRAIN

WHEAT, NO 2 RED

	Feb. 19	before 2 wks.	before A yr.
Chicago	1.03 @1.08	1.11 @1.13½	98¾@99¾
St. Louis	1.05 @1.07½	1.08 @1.12½	95 @96½
Kan. City	98 @1.02	1.00 @1.04	96 @97½
Cincinnati	1.06 @1.09	1.11 @1.14	98 @1.00
New York	1.02 @1.11	1.11 @1.10½	1.00¾@1.02

MINNEAPOLIS—Spring wheat, No. 1 hard, 88¼c; No. 1 northern, 86¾@87¾c. A year before, $1.02@ $1.02½.

CORN NO 2 WHITE

Chicago	48¼@49	51 @52	62½@63½
St. Louis	48½@49	52¾@53	63½@64
Kansas City	47½	51	65½@67

New York	39	39 @40	.....

FUTURE GRAIN PRICES

Chicago grain futures closed on February 19, 1913, and two weeks before as follows:

WHEAT—May, 92½c; July, 99⅜c; September, 90⅛c. Two weeks before, 93⅞c, 91⅝c and 90¼c respectively.

CORN—May, 51⅞c; July, 53c; September, 54⅛c. Two weeks before, 53¾c, 54½c and 55¼c, respectively.

OATS—May, 34c; July, 34⅛c; September, 34c. Two weeks before, 35⅛c, 35c and 34⅞c respectively.

ADVICE—We believe prices of all grain will be enough higher to be profitable to hold. An advance should come when spring work opens up and farmers in the grain states will be busy in the fields.

COTTON

NEW YORK, Feb. 19.—Middling upland closed 12.60c; middling gulf, 12.85c. The price of cotton is 35c a hundredweight lower than two weeks before. It is $2.10 a hundredweight higher than it was a year before.

ADVICE—We advise selling cotton when the price is well over 13 cents, unless it can be held a while longer without expense. The future price will depend very much on the weather. A couple of months may bring a betterment in prices, but we do not expect lower prices.

LIVE STOCK

Indianapolis Stock Market, February 19, 1913.

CATTLE—Range of day's paying prices for steers ..... $4.75@8.00
Range of day's quotations for steer..... 7.75@8.50
Good to choice steers, 1,300 lbs. and up.. 7.65@8.00
Good to medium steers, 900 to 1,250 lbs... 7.25@7.75
ROGS—Range of day's paying prices..... 7.50@8.65
Range of day's quotations..... 7.00@8.65
Best heavies, 210 lbs. and up..... 8.55@8.65
Common to choice lights, 130 to 230 lbs... 8.60@8.65

The market on cattle is $1.75 per cwt higher to unchanged than two weeks before, and $1.00 to $2.00 a cwt. higher than a year before. The price of hogs is about 25c higher than two weeks before; it is $1.80 to $2.00 higher than a year before.

ADVICE—Increase the supply of cattle and hogs. Fatten to a finish. Meat is worth much more than grain now. Sell when matured and fat.

CHICAGO PRODUCE MARKET

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last Week	Last Year
Monday	127	123	124
Tuesday	58	45	123
Wednesday	45	28	37
Total, three days	230	196	284

Market was stronger today and prices averaged 1@2c higher. There was a good shipping demand and filling of outside orders served to clean up superfluous stock on the market. Offerings were moderate and buyers appeared to be in need of supplies.

Sales reported were: Wisconsin—Dusty Rurals in bulk—2 cars at 49c, 1 car at 50c. Sacked Round Whites—2 cars at 47c, 2 cars at 48c.

Per bu. bulk or sacked, Wisconsin, Burbanks, Kings or Rurals, ordinary to choice....43@50c
Fancy Rurals possibly a shade over.
Minnesota, round white, bulk or sacked.....42@48c
NEW POTATOES—No change in this market. Bermudas in moderate supply. Demand is very tame.
Per barrel, No. 1 ..... $6.50@
No. 2 ..... 5.50@

The price of old potatoes is 2c to 3c a bushel higher than weeks before, but 55c to 59c a bushel lower than a year before. The price of old potatoes is unchanged from two weeks before. A year before new potatoes were quoted about $1.50 a barrel higher.

ADVICE—Readers of this paper are recommended to sell potatoes as soon as they can, being careful to get the highest price the market will pay. Don't let local buyers deceive you about values.

SWEET POTATOES — The market is well supplied. Trade remains of a quiet order. Fine qualities are steady. Comparatively few are fine grade. Prices are irregular. Illinois about $3 per barrel for good, down to $1.50 to $2 for common. Delawares, 50c to $1.25 per hamper. Some from Mississippi, small white tubers, selling at 75c a hamper on Chicago markets.

STRAW—Rye straw quotable at $7.50@8.00. Oat straw, $6.50 @7.00. Wheat straw, $6@6.50.
Rye, oat and wheat straw each 50c a ton higher.
HAY—Receipts, 1,217 tons.

Demand light and offerings large.
Choice Timothy Hay.$16.00@17.00
No. 1 Timothy... 13.50@14.50
No. 2 Timothy... 12.00@12.50
No. 3 Timothy... 9.00@11.00

The price of timothy hay is from unchanged to 50c a ton higher. A year ago choice timothy was quoted at $21.50@22.

BROOM CORN—The demand remains quiet; nothing new can be said of the market. Corn that is of poor quality is very dull and easy.
Per ton, Illinois
Corn ..... $100.00@120.00
Oklahoma ..... 50.00@ 65.00

Illinois corn is from unchanged to $20 a ton higher. Oklahoma from unchanged to $10 a ton lower.

BEANS — All that can be learned is that the market remains very quiet. Demand is restricted for all kinds. The market is reported very well supplied and prices remain in their late position.

Pea Beans—
Hand-picked, choice ..... $2.25@2.27
Prime ..... 2.15@2.20
Stock faulty ..... 1.50@1.75
Mediums nominally about same as Pea Beans.
Red Kidneys, choice ..... 2.25@2.30
White Kidney, nominal.
Brown Swedish, long ..... 1.25@1.50
Brown Swedish, round ..... 1.25@1.50
Limas, per 100 lbs..... 6.40@6.50

The price of all beans is the same as last two weeks before.

ADVICE—We recommend gradual selling.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	7.335	6,259	4,056
Tuesday	9,240	6,475	5,779
Wednesday	6,403	4,737	4,806
Total	22,978	17,471	14,641

The feeling is stronger and prices were ¾c higher for fresh.

A better demand existed today—there was more disposition to buy, evidently on the belief that prices were low enough for the present time. The production is reported to be quite heavy, so that there will be ample supplies to meet the requirements. What demand exists is principally for fresh, or new-laid eggs, with a little inquiry for storage. Ordinary fresh eggs are slow sale. Some of the so-called fresh eggs are mixed with stale and held stock, and these come into competition with storage. They sell at a wide and irregular range.

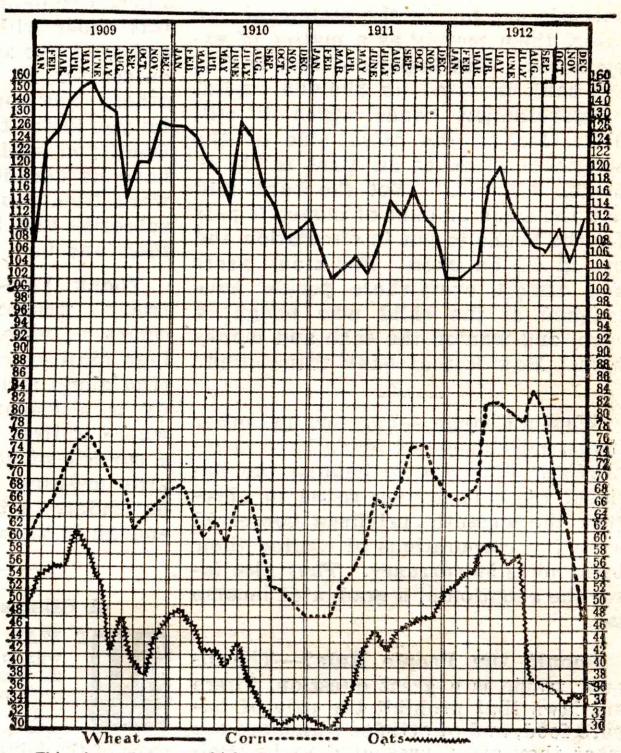
Miscellaneous lots, cases returned, 15½@17½c, depending on quality.

Ordinary firsts quotable at 16@17c.
Firsts quotable at 18¼c.
Checks—Fresh quotable 13c per dozen.
Dirties—Fresh, quotable 14@15c and storage 10c.

Refrigerator eggs were steadier, and good stock quotable at 14c, with some poor lots ranging much less.

The price of eggs is about 3c to 5c a dozen lower than two weeks before.

ADVICE—Of course eggs should be sold or stored while fresh. We would like to see more local unions store for the trade next winte,. Correspond with storage houses in the F. S. E. directory.



This chart shows the highest mont hly cash price for the three leading grains at Chicago, for a period, 1909 to December, 1912, inclusive. The figures on right and left margins ar e prices in cents. The lowest prices for December were as follows: Wheat , 98c; corn, 46c and oats, 33½c. This chart will be continued.

The price of all beans is the same as two weeks before.

APPLES—Are doing fairly well in the way of sales. Stocks have not been reduced sufficiently to bring about any change in prices. The supply both of barrels and boxes remains liberal. Some cars of barrels continue to come in, and in some cases the fruit is said to have shown some frost damage. The weather is favorable for the movement of apples.

"Hurry Up the Paper, We Want It Quick

DEAR EDITOR:

I must tell you about UP-TO-DATE FARMING. It is the best possible, Several members of F. S. E. have said: "Hurry up that paper, we want it quick." If each subscriber does not get it promptly he is sure to complain. The cartoon on first page of February 1 number is immense. It tells the truth plainer than words. I had to roar with laughter at the ludicrousness of a tragic truth told on that page. All those hands held out to help the farmer with advice and sympathy and wealth that the farmer created. The farmer made the wealth, he pays the salaries, he makes the dividends possible and the interest on real and watered stocks, he builds mansions, the skyscrapers, the freight cars, the passenger coach, and the Pullman car.—R. A. Southworth, Idaho Falls, Idaho.

Market no More Crops the Old Way the Equity System is Better

WHEN TO SELL WHERE TO SELL HOW TO SELL

Tell us below what you have to sell now, or will have in the future, and we will help you to get it to the best market. This applies to grain, live stock, cotton, vegetables, fruit, hay, eggs, poultry, in fact any farm crop. Fill out the following blank very plainly. No attention will be given to blanks illegibly written.

The Problem of Marketing Crops

By J. A. Everitt

Editor's Note.—This article will run in three more numbers. The chapters to follow are: Chapter II., "The Equity System of Marketing;" Chapter III., "Farming Must Be a Money Making Business;" Chapter IV., "How Much Must Be Controlled;" Chapter V., "Competitive Marketing and Wasteful Duplication of Effort Must End."

These articles have been prepared to answer ever-occurring questions how a sound and enduring farmers' organization, equipped with a practical marketing system to protect the producers of crops, can be established. And the problems considered in this article are not solely farmers' problems, but problems that concern every individual in the United States. They are nation-wide problems, therefore they must have an interest for all the people. A careful reading of the entire article is urged.

CHAPTER I

WHAT IS WRONG WITH AGRICULTURE?

A Statement of the Case

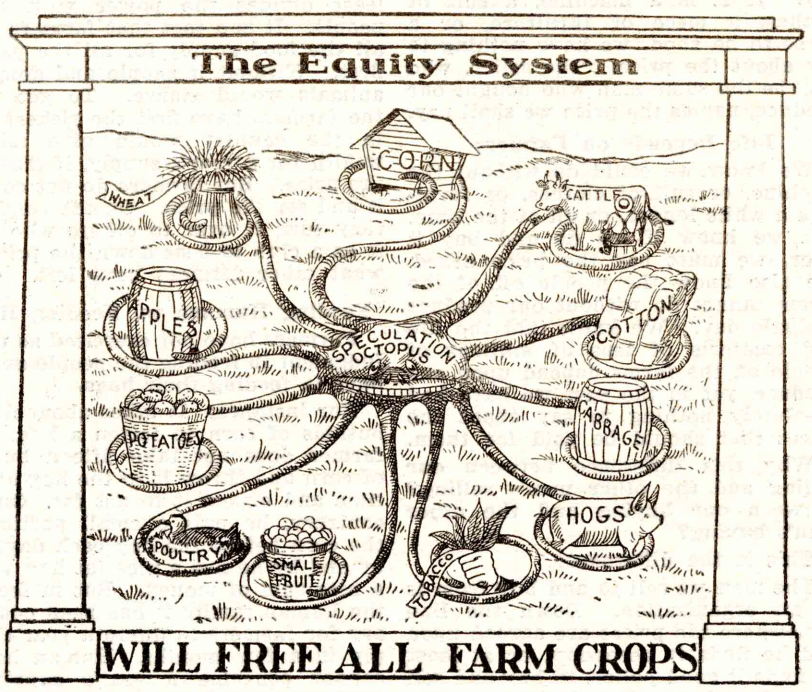
ON THE American farms we see the wonders of nature wrought every day. Our eyes are the beholders of the great miracles of modern times. The farmer goes forth in the spring with a hand-full of seed, and garners in the summer and autumn a harvest of plenty this is eagerly waited for by the hungry world. Verily, the farmers have been taught and have learned from long experiences the secrets of production. Never in the recollection of men who live now have they failed in their duties to produce enough to feed the people and dependent animals and big quantities to send to foreign countries.

Farmers Have Never Failed

Factories may, and sometimes have failed to produce plenty of their commodities to satisfy the would-be consumers. Laborers in other fields have often refused to work, and thus caused a scarcity of manufactured goods, coal, etc.; or, by stopping the means of transportation, have prevented the people from getting needed supplies. But farmers have never failed to respond to the call of the hungry and those who needed to be clothed.

Independence Ended With the Harvest

Thus, people who produce all the necessaries of life have done their full duty to their fellow men and to the nation. But, brother farmers, how have the country and our countrymen done to us? While we were preparing the ground and sowing the seed and cultivating the crops and harvesting we were supreme. No person assumed to do such hard work for us. The only concern the other people had for this part of the operation was the fear that we might not raise all we possibly could—that there might not be bumper crops to handle, transport, store and manipulate. The interest they took in such operations was to goad us to farm more, farm better, work harder and raise more, although they knew we were producing enough to supply the demand and usually too much to sell at profitable prices. So we have been working as hard as we could and have been producing all that we could. In this we were not hindered. But our independence and supremacy ended with the harvest. When the hard work was done, that of producing, and the easy work began, that of marketing, our independence ended. When we hauled a load of fine grain or vegetables, or potatoes, or fruit, or cotton to market, we knew we could not have the same independence in pricing it that we had when we decided to put corn in one field, sow wheat in another, plant potatoes in this one and cabbage in that one and cotton in another. On the contrary, we knew that there was a man on the market who would tell us what he would pay for our produce. Isn't this true?



Thirty-nine Cents a Day

And the man who told us how much he would give us for the crops set our wages and the rewards for our wives and children for all the months of thought, care and toil put on those crops to bring them to full maturity. If we hired help on the farm we paid the current rate of wages, but even this was not considered by the man who told us how much he would give. The price he paid for our produce, a price of his own setting, fixed the value of the crops raised on the average farm in the United State, in 1909, at $863.00 (Census report). That is, the average farm produced in crops in the year 1909 $2.34 daily at the valuations set by the buyers. Counting six people to the average family it was 39 cents a day for each. But this was not all money, because the family consumed part of the produce, seed was saved, the stock fed, then out of what was left the taxes had to be paid and all other expenses met.

Farmers' Wages and Others Compared

From a government report we find that the mechanics who work in factories making the plows, harvesters, and other implements for farmers' use work three hours to earn $1. The mechanics who work on automobiles, wagons and harness that we use work three and one-half hours to earn $1. The railroad employe who works on the trains which haul our produce to the market gets $1 for two and one-half hour's labor. But the farmer who does all the work of producing the necessaries to support all of these and all of the other people off of the farms, takes all the risks of drouths and other uncertainties that go with farming, has been working ten hours to earn $1.

In these days farmers are usually crop rich but a large per cent. of them are money poor. This is the most surprising of modern economic paradoxes. With modern machinery the farmer of today can produce far more than the farmer of a few years ago, but his net earnings has not increased in the same ratio. For example: The yields of corn, oats and potatoes in 1912 were 1,834,000,000 bushels more than in 1911, but the value of the 1912, larger crop was, in November, 1912, more than $125,000,000 less.

That is, farmers raised 1,834,000,000 bushels of corn, oats and potatoes in 1912 more than they did in 1911 and gave it all away and the people who took it penalized them more than $125,000,000 for having done it. And it is always this way when farmers are very successful in producing.

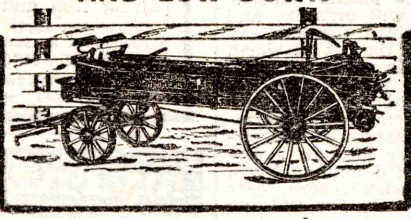
The question cannot help but come up:

Why is it that farmers, who produce the most necessary things on

APPLETON

RETURN APRON ENDLESS APRON AND LOW DOWN

MANURE SPREADER



Solid oak, trussed frame; worm and worm gear apron drive, encased, runs in oil; wood or steel wheels.

So simple a boy can run them. Apron works over chilled rollers. Wide seat, comfortable foot rest.

Appleton Manure Spreaders always give long service; spread even, pull easy; because they are perfectly designed and honestly constructed. An Appleton Manure Spreader is a profitable machine for you to buy. Its use keeps your land healthy and in highest productive condition—that means paying crops. Write today for Free Catalog illustrating and describing our 10 styles.

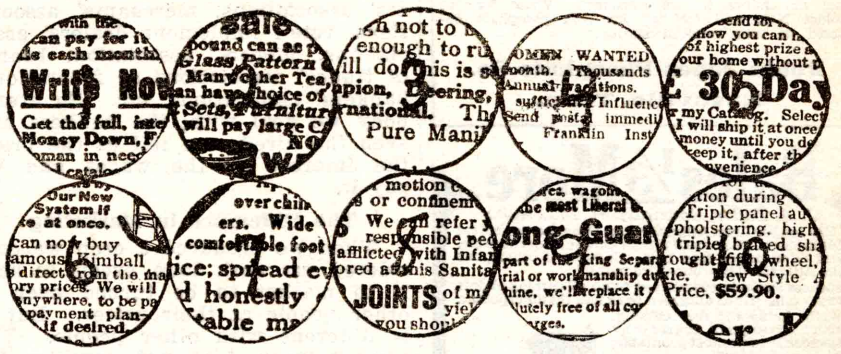
A complete line of machines in stock in your territory.

APPLETON MANUFACTURING CO., 264 Fargo St., Batavia, Ill.

PUZZLE

Name the ten Advertisers Represented below

Just a little of your time may win for you the first prize in this interesting contest



EXPLANATION

We reproduce above portions of ten advertisements in this issue. For example: The first one is from the advertisement of Miller-Hoefer Co. The others you are to find.

CONDITIONS

In addition to the solution of this puzzle it is a condition that each contestant, in order to have his answer considered, shall write a special letter, telling us which advertisement he (or she) likes best in March 1st number, and why. In case of a tie, prizes will be awarded to the ones writing the best letters. Answers to this contest must be written entirely separate from orders or letters or other subjects, otherwise they will not be considered.

Contest open to every reader living outside of Indianapolis and Marion County, Ind.

All answers to be considered must be received before March 15.

We can not answer letters regarding this contest; the conditions given must be complied with.

PRIZES

First price, to correct answer and best letter $3.00

Second prize 2.00

Third prize 1.00

Save the Horse's Neck and Shoulders

No horse will pull near as hard if his shoulders and neck are sore from a poor fitting collar. He'd rather take a "licking" than throw his weight against those sores and galls.

Give him ideal working conditions—a good fitting collar and Ventiplex Collar Pads. See what a difference they make.

Ventiplex Pads

keep the neck and shoulders in good healthy condition. Prevent sores, galls or rubbing. The porous Ventiplex fabric absorbs all sweat and moisture. The air freely circulates through the fabric keeping the neck and shoulders dry and clean. When the pads get soiled, you can wash them as you would clothes. They hold their shape.

Your dealer should have them. If he hasn't write us.

BIG FREE BOOK ON ALFALFA

HOW TO GROW IT ON YOUR LAND

"Alfalfa—Wonder Crop," is the title of a new book just issued by us. It contains a fund of priceless information on alfalfa growing secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. This information was secured at a great cost of time, money and research, and yet it is yours for the asking **without cost.** This book will convince you that your farm has some land on which you can grow alfalfa; it tells how to get results from the first planting, how to select the field and prepare the soil, including fertilizing, plowing, liming, and how to prepare the seed; when to plant, how to plant. It tells you what to do during the growing period, how to get bigger than average crops, and how to cut and cure. This book is worth many dollars to the farmer interested in growing alfalfa, but we gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

GALLOWAY BROS.-BOWMAN CO., BOX 504 S WATERLOO, IA.

ROBIN JONES ROCK PHOSPHATE

is the fine ground raw phosphate rock (floats). A natural fertilizer for all soils deficient in phosphorous. Recommended by prominent agricultural authorities, and used by progressive farmers. We sell direct from our mines to the consumer. Write for our booklet N-2, and cost of our rock phosphate delivered at your railroad station.

Robin Jones Phosphate Co.
Nashville, Tenn.

Bales ⅓ More

J. A. Tudor, Edwardsport, Ind., says:

"The longer I run **Alligator Box Presses** the better I like them. They are *lightest running*, most durable, and have larger feed hole. Have tried others, but the **Alligator** bales one-third more."

Spencer Press is guaranteed to do all catalog claims or no sale. Rubs off green bark less than Perpetual.

Write today for *free* catalog, which gives plain figures why Spencer Press is most profitable. *Ten days free trial.*

earth—the only absolutely necessary things—are the poorest paid of all laborers and are the only ones of all producers that have nothing to say about the prices their products shall sell for, but have always taken prices decided by others?

And it is the same way when we buy. If it is a machine, a suit of clothes, a piece of furniture, or a horse to be shod, we have nothing to say about the price. The seller, who may be the same man who bought our produce, names the price we shall pay.

Life Depends on Farmers

We know we could do without the machine, or suit of clothes, or furniture a while longer, or all of the time. But we know if we do and buy it later, we must pay the price asked. We also know the people off of the farms cannot do without our produce a single day. We know that the life and comforts of tens of millions of people off the farms depend upon our produce, yet in the past we have had absolutely nothing to say about the prices that should be paid for them.

Why this difference between our selling and the other man's selling? Between our buying and the other man's buying?

This is the difference:

The man we sell to and buy from is in an organization. Down the line somewhere the prices are agreed upon and he finds it necessary, or at least he finds it good policy, to buy and sell at such prices. For instance, when we sold grain, the prices were decided by the Chicago Board of Trade, or, if the country was exporting, then the price was largely decided at Liverpool. If we sold live stock, the prices were decided by the Chicago Stock Yards, or the stock yards of some other big market, or all of them co-operating. If it was butter or eggs, the prices were made by some Butter and Egg Board in the city where the local buyer shipped. When we sold anything, the local buyer would wait each day for word from "the markets," and when he got the word from the markets each morning he would tell us the price and he would always make the price low enough to protect himself if the market price went down, but which would give him a bigger profit if the "men up there" marked the price up.

Everybody in an Association

And it was the same way when we went to buy. There are manufacturers' associations, merchants' associations, retail implement dealers' associations, jobbers' association, boards of trades' associations or federations, bankers' associations, etc. So everybody we deal with, the bankers and even the hired men tell us the price, the interest or the wages and we pay it.

The Difference in Marketing

When we produced a crop we considered our work done, except to haul it to market to be turned over to other people at their prices. But it is different with other people. The manufacturer does not consider his work done with the completion of a machine or piece of goods. He does not dump his products blindly on the markets to be the chips for gambling games played by a set of people who do not produce anything. But he learns where the demand is and he sends just enough of what he makes there to supply the demand. He can do this because he has a business system at the selling end. A selling organization. And the system enables him to prevent glutting markets. As a consequences he and his agents can set the prices and get them.

So the difference lies in the fact that farm crops are not marketed like other things. Instead of them being controlled when they are produced, they are dumped on the markets much faster than the people can consume them. The surplus then goes into the hands of other people who were not competitors in the matter of producing crops, but become competitors of the farmers in the matter of marketing them and price-making.

The Robber System

This system robs the farmers of the power to set the prices and it puts in the hands of other people, or at least divides the power with other people. It is a fact that farmers have all the food supply for all the people, first. Without it people and domestic animals would starve. To get what the farmers have first the richest man in the country would give all his wealth for a year's supply, if that was the price. But farmers do not control it and set the price. On the contrary, they turn it over to others who hold it as a club to beat down the price on what other farmers have left.

Feeding Humans vs. Feeding Hogs

Farmers have not exercised as much judgment in feeding the people as they have in feeding their hogs.

For instance: It takes about fifteen bushels of corn to fatten a hog. The farmer does not take fifteen bushels of corn and throw it to the hog at one time and expect it to get fat. On the contrary, he puts a small portion of the corn before the hog each day, and by and by he has a nice fat hog worth a nice sum of money. But in feeding the human family it has been customary for farmers to dump a year's supply in a few months. Human beings cannot consume a year's supply of food in a few months any more than the hog can eat enough corn to fatten him at one feed. Farmers control the feed when feeding hogs, but they have not been controlling the food of human beings and the dependent animals off of farms. For proof of this witness the enormous supplies that accumulate in warehouses and elevators in the first few months after any harvest. And the faster we dumped our crops, the greater grew the visible supply and the lower prices were put. When farmers market freely, the big manipulators say, "We'll put the prices down and get it cheaper." But when the farmers are stingy about marketing the visible supplies decrease and they put the prices up to tempt the produce from the farmers to the market. Watch the market reports a few days and see if this is not so.

Farmers Are to Blame

And who is to blame? Everybody knows that if farmers would control their crops and set a certain price on each crop, and this price would be known by all the farmers who produce the crop, and then if we would sit down and wait, the price set would be the market price in a few days' time and the people would pay it. Nothing is more certain. When farmers once do this, gambling in farm crops will be as impossible as it is in self-binders or gold dollars, or in air or water.

Western Man Says All Depends on Organization

Following is what a western man, a member of the Kansas City Board of Trade, said on this point:

Well, if a man, or a set of men, has all of what someone else must have, and does not put the price on it, they never ought to complain of low prices made by someone else. The whole matter depends on whether the farmers will organize and act as a unit. If American farmers say wheat is worth 80 cents, then it is worth 80 cents; if they say it is worth $1, then it is worth $1, and the price is settled. If the farmers do not make it so, nobody is to blame but themselves. Farmers would be absolute masters of the situation if they would enter into an agreement and keep up concerted action. Then, instead of the price of wheat, corn, oats and live stock being made by the Chicago Board of Trade, and the price of cotton by a band of gamblers on the New York Cotton Exchange, it would be the farmers who would tell these gentlemen at what prices these staples, which they produce, should go into consumption.

Conditions Are Growing Worse

So what farmers need is an organization, a business system of their own at the distributing or marketing end

(Continued on Page Thirty-one)

When you drive to town, count the buildings covered with Ready Roofing

The men who purchase roofing for railroad depots, large factories and warehouses are shrewd buyers—they investigate and *know*. You, too, will make no mistake if you cover your home and farm buildings with

Certain-teed

(Quality *Cert*-ified—Durability Guaran-*teed*)

Roofing

in Rolls and Shingles

Its durability is guaranteed for 15 years—it comes in red, green and slate gray shingles as well as rolls. Look for the ***Certain-teed*** quality label. Costs *less*—get prices from your dealer.

Valuable Book *Free*

You will find many valuable suggestions in our new book, **"Modern Building Ideas and Plans"**—it tells you what to do—and what not to do—it suggests economies and conveniences that will save you money.

A book of this kind would ordinarily sell for $1—but as it shows the use of our ***Certain-teed*** Roofing on all kinds of model homes and farm buildings, we offer it to you at 25 cents. We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy ***free.***

If you write us, enclose 25c to cover cost, postage and mailing.

Gleanings from All Fields

And What We Think of Some Current Events

Secretary Wilson Advises

Recent advice given by Secretary Wilson to the farmers is that they "Should associate themselves together so as to assemble their individual products and thus market in car load lots, having obtained meanwhile information as to the state of the market, so as to know when to ship and where." To bring this about he would have Congress establish a "Division of Markets and corps of traveling agricultural agents to assist the farmers in forming associations for marketing their products."

So the secretary would have a horde of people go out from Washington and directed from Washington, to assist the farmers in organizing, or, as we have frequently said, to build their machine of marketing. We do not consider that it is necessary for the Department of Agriculture to do this, and force upon the agricultural country an army of petty office holders. The farmers are fully able to build their own machine, and having built it themselves and controlling it, they will then be in a position to run it without interference from other people. Farmers, when they have their marketing system, will want to run it without any Congressional direction or experts from any department at Washington. Secretary Wilson gives the right advice when he recommends farmers to organize to ship in carload lots, but he has not gone half far enough. Such organizations must federate so that they can actually know where the supply is and where the demand is, and have the supply directed to the demand from one head, or clearing house. Anything short of this will be no better than the thousands of examples of independent marketing that we have in the country now.

Production of Wheat

A cablegram, dated Rome, January 22, 1913, gives total production of wheat in Argentina, Australia and New Zealand, this season, at 321,000,000 bushels. This is 30.7 per cent. greater than the production in the same countries last season.

What the South Lost

Referring to the 1911 cotton crop, Editor Poe, in an article entitled "A Story of a Crime," estimates that the Southern states lost $300,000,000 by unwise marketing of that crop. It has been estimated by others that South Carolina lost $250,000 per county, and of the eight hundred counties that produce cotton anyways extensively, the average loss per county was $125,000, but if Editor Poe's figures are correct, then each of the 800 cotton counties lost an average of $375,000.

How it Looks to the New Zealander

"A Prophet is not without honor save in his own country." We are reminded of this saying when we read about farmers co-operation in the United States in a New Zealand paper. We quote as follows:

"What one hears from the United States about farmers co-operating almost takes one's breath away by its truly American bigness. More than half of the United States agriculture is reported to be more or less governed by co-operation. One comparatively young organization has two million members. Also, it owns 1,628 warehouses, a large number of elevators, for the handling of grain, 245 packing houses, dozens of newspapers, coal mines, several banks and implement factories, fire and life insurance companies, and dozens of other factories and exchanges too numerous to mention."

If such an organization existed, it might be mistaken for almost any other industry than agriculture. But for the information of our brother publisher in far away New Zealand, we must say that this is only a specimen of American exaggeration. We hope, though, that the time is not far away when two million agriculturists will be in a truly co-operative organization, and attending strictly to the business of agriculture, which is the greatest industry of all, and leave the business of publishing newspapers, mining coal, running banks, operating implement factories, and conducting fire and life insurance, to those educated to those lines.

Harvester Company Divides

We learn from a Chicago dispatch that the International Harvester Company has divided itself into two corporations, each one with a capitalization of $70,000,000. One of these corporations is to take over the company's foreign business, including the manufacturing plants in Canada, Sweden, Germany, and Russia.

An Irishman's View of American Farmers

J. Horace Plunkett, a noted Irishman, who has large landed interests in the United States, and who is also a member of the British House of Commons, attributes the high cost of living and the low rank of our agricultural production, to the lack of co-operation in marketing by the producers. He said in a recent address:

"While I have nothing but congratulation for your desire to help the farmers, I am prompt to say that a very serious indictment can be made against the farmers of the United States for failing to embrace the opportunity for co-operation and the elimination of unnecessary handlers. And I don't blame middlemen but I do blame the farmers, for not co-operating to reduce the cost of distribution. If the farmers don't co-operate to do their business for themselves, they will continue to have their business attended to by others. It is absolutely essential that the farmers of the United States, at the very earliest possible moment, organize their industry along lines of co-operation and establish a distributing or business agency of their own."

A Prediction on Onion Prices

Notwithstanding the large crop of onions and the extremely low prices that prevailed last fall, and the fact that many onions were not harvested from the fields, and that many that were harvested and put in temporary storage, have perished, it is now being predicted that there will be less strictly No. 1 onions in the country next spring than there were a year ago. It is further predicted that a big advance is likely to take place.

Proposes to License and Bond Commission Men

A bill is before the New York State Legislature, which provides that each commission merchant be put under a ten thousand dollar bond before he will be allowed to do business. The bill applies to all persons, firms, associations or corporations selling any farm produce on commission. Everything produced on the farm is included with the exception of timber products The bill further provides that all commission houses must take out a license which will cost ten dollars, this to be done before July 1, 1913. The bill further provides for a commissioner and his assistant, whose duty it shall be to investigate commission houses upon complaint, including examination into the charges for selling, cartage and other services.

Commission merchants are opposing the bill, and declare that should it become a law, there are so many drastic features about it, that will add to the expense of handling the produce, that instead of 10 per cent. or less being the commission rate, that the rate must be advanced to 15 per cent.

Tariff Tinkering on Citrus Fruit

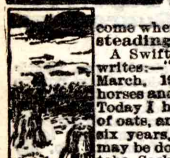
YOUR OPPORTUNITY
is NOW in the Province of
SASKATCHEWAN
Western Canada



Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 60 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

business of growing citrus fruit. Growers in Florida have probably one-third as much invested. Congress is now seriously considering a radical cut in the protection to citrus fruit, if indeed it does not wipe out the tariff entirely. Naturally the growers in both of these states are much disturbed. Some claim that the tariff alone makes it possible for them to stay in the business. To this plea for protection, house leader Mr. Underwood replied:

"What we want to do in arranging this tariff is to get a reasonable amount of importation, so that we may get a reasonable amount of revenue. It is so especially in regard to oranges. Reasonable revenue is what we expect from the duty. Growers must take that portion of competition. We are going to put on the free list some real necessities of life."

Yet it is a fact that large quantities of oranges, lemons, grape-fruit, etc., are imported from other countries, therefore, there is a revenue from such importation. The question then is whether the industry in this country, which is conducted on a more expensive scale and by higher priced labor than in foreign countries, and as relates to California, with much higher transportation charges to get the fruit to the places of consumption will stand any reduction of the tariff without seriously injuring or ruining the industry, and how much; It is argued by the citrus growers that because of our protected market, the citrus fruit of America has come to be the best in the world. With less protection the question arises whether the quality will be maintained, or whether our markets will be flooded with cheap and inferior foreign products.

Value of All Crops

The Department of Agriculture estimates that the value of all farm products in the country in 1912 was $9,532,000,000. This, of course, includes all that will be sold off of the farm direct, and indirectly in the form of meat and other manufactured products.

The Capitalists Want In

The Spokane News Bureau at Spokane, Wash., has sent out the following announcement:

"Following closely the organization of the North Pacific Fruit Distributors, designed to market co-operatively the crops of Washington, Oregon, Idaho, and Montana a group of Spokane capitalists is aiding growers of the immediate Spokane county to perfect a local unit by forming a $125,000 company."

"While an entirely different set of men is behind the Spokane county enterprise, it will be a subsidiary of the North Pacific Fruit Distributors and is being perfected on such a strong basis that growers of this locality are now assured of having an up-to-date organization for marketing and storing purposes."

We are not very well acquainted with this movement, but as a general proposition, we recommend the fruit growers of the Northwest to keep clear of the "group of Spokane capitalists." The fruit growers can handle their own business, if they just make up their minds to do it, and adopt a practical system. They will find, however, that to realize the greatest benefits their organization must not be confined to fruit alone, but it should include every agricultural industry in the territory that it embraces.

Oklahoma City Selected

The next International Dry Farming Congress will be held at Tulsa, Okla. The date of holding the Congress remains to be set.

How Does This Sound to the Fruit Growers?

In his welcome address to the Kentucky Horticultural Society at Henderson, State Senator Sterling L. Marshall declared that Kentucky is cursed with two much tobacco growing, that the salvation of the farmer is in the growing of fruit and a discontinuance of the raising of tobacco. President Cunningham, of Louisville, agreed with Senator Marshall and urged that the fruit growers get busy and start a propaganda. Mr. Cunningham said that the supply of fruit was falling farther behind the demand every year, and that there is no danger of over-producing the crop of fruit."

League Will Work to Lower Living Cost

The commission men of the United States have a league. It is called "The National League of Commission Merchants." It does not include all commission men in its membership, and will not admit all commission men. In fact, the membership of the league comprises a very small portion of all of the commission men. The league met recently in Cincinnati, and it is said that the attendance was the largest in the history of the association. We quote from a statement made by the newly elected president as follows:

"The league, from its very inception, has had for its object the improvement of trade relations between the growers, distributors and consumers. This branch of business activity, more than any line or person, is interested in reducing the cost of living, because the margin of profit is so small that it is dependent upon a large volume in order to produce sufficient returns to justify the merchant in remaining in the business. Inasmuch as many important questions are now being considered, which bear directly upon the cost of living,

A Hint of the VALUES in the Sears Roebuck Vehicle Book!

$59.90 Gets This Triple Panel Auto-Seat Buggy

Over 49,000 sold because farmers can easily see the value offered. Up to the minute in style and finish. Materials and construction that make it easy for us to guarantee absolute satisfaction during the entire life of the buggy. Triple panel auto seat, genuine leather upholstering, highest type body construction, triple braced shafts, best wheels made, full wrought fifth wheel, real long distance self oiling axle. New Style Auto Skeleton Top. Shipped from warehouse near you. Price, $59.90.

Over 100 Other Bargains

You should have the Sears-Roebuck Vehicle Book before you order your new buggy, surrey, wagon or vehicle of any kind. It is a reliable guide to highest quality, lowest prices and the greatest value for every dollar. It is beautifully illustrated in colors, contains complete and accurate descriptions of over 100 styles of vehicles. You will find it easy to select the vehicle you want, and easy to compare our quality and prices.

Send a Postal Now

Thousands of others are saving from $35.00 to $50.00 by ordering their vehicles through the Sears-Roebuck Special Vehicle Book. Why not send a postal card, see for yourself the many styles, the snappy designs and the low prices? Read how they are made and what they are made of. Read our straightforward guarantee of absolute satisfaction. Then decide where you will buy your vehicles for 1913. But send for the book now. A postal will do.

One Dollar
Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded

$1.00 Brings It—Freight Prepaid

1913 Model

The CHATHAM Grain Grader and Cleaner

Manson Campbell

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best*, *easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

Your Dollar Returned

If you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing*, *feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept. 31,

MANSON CAMPBELL CO., Detroit, Mich., Kansas City, Mo., Minneapolis, Minn.

SEED CORN 146 BU. ACRE

DIAMOND JOE'S BIG WHITE—A strictly new variety. None like it. It is the Earliest and Best Big White Corn in the World—Because it was bred for most Big Bushels, not fancy show points; because grown from pure inherited tock; every stalk bearing one or more good ears, because scientifically handled, thoroughly dried and properly cured and had the most rigid inspection. Also all other leading standard varieties at FARMER PRICES. OUR BIG ILLUSTRATED FARM AND GARDEN SEED CATALOG mailed FREE. A postal card will bring it to you. Write for it today. Address, RATEKIN'S SEED HOUSE, Shenandoah, Iowa. Box 33

this organization during the coming year, will actively co-operate in bringing about the proper solution of these problems."

Milk Producers in Fight with Milk Trust

The annual meeting of the Illinois Milk Producers Association was held in Chicago in February. Secretary Greer in his annual report said:

"The avarice and greed of the milk trust, during the past year, particularly in its dealings with the milk producers of this district, have been so indefensible and their treatment of the men whose production they buy has been so unfair and unjust, that it only requires a cleancut and well-defined program to enlist the active interest and support of every milk producer in the district.

"We have exhausted the expedients of diplomacy, reason, and conservation in our dealings with the milk trust and we have gone out of our way in our desire to be both just and fair to the big buyer of milk in this district.

"That the dairymen of the Chicago district are and have been in bondage to a merciless milk trust cannot be denied. The aggorance with which this milk trust manipulates the prices of milk to the producer, as well as to the consumer, is bolder than ever. The issue should be fairly and squarely met and, in my judgment, it should not be sidestepped or any compromise made.

"Great responsibility rests upon the dairymen of the Chicago district. The consumers of this great city have been watching the struggle between the producer and distributer for four years and there is no question but that the sympathy of the consumers is with the producers."

Packers Reaching Out

A dispatch from Chicago announces that Swift and Company, the packers, have purchased the following companies:

Clarinda Poultry, Butter and Egg Company, with offices and farms at Clarinda, Leon and Creston, Iowa, and Lincoln, Neb.; Central Michigan Produce Company, Alma, Mich.; Iowa Cold Storage Company, Clinton, Iowa; S. P. Pond Company, Koekuk and Ottumwa, Iowa.

The purpose of the purchase as announced by Swift and Company is to do away with the shipment of live poultry from the various centers of these companies. They will be used as stations where poultry will be dressed and shipped in refrigerator cars to consuming markets.

Proposes to Exempt Farmers' Organization

By a vote of 30 to 22 an amendment offered by Representative Hammill of New Jersey, to the act appropriating $300,000 for the enforcement of the anti-trust law, that no part of the appropriation should be used to prosecute any voluntary organization of working men, was adopted. A similar amendment applying to farmers' organizations, offered by Representative Roddenberry of Georgia, was also adopted.

The Price Problem

The National Hardware Dealers' Association will hold its next annual convention in Jacksonville, Fla., in March. This association is forcing the fight to get better prices for retailers. "The price question," the announcement says, "will take precedence over all other subjects in the deliberation of the body."

Milk Manipulators Fined

The Minneapolis Milk Company and its president were each fined $3,000 in the District Court in Minneapolis on Feb. 10th. They were convicted of having conspired with thirteen other firms and dealers to raise the price of milk, in violation of the state anti-trust law. The Minneapolis Dairy Company is on trial for the same offense.

Farm Prices Decrease

A despatch from Washington, of Feb. 10th date, announces that staple farm crops averaged nearly 20 per cent. lower than on the same date a year before; 6 per cent. lower than two years before, and nearly 19 per cent. lower than three years before.

"A Jewelry Store Between the Covers"

Many people want to know if jewelry, such as watches, rings, silverware and diamonds, can be bought by mail to advantage. Yes, certainly, if from a reliable house. A big company like the Miller-Hoefer Co., 149 Miller Bldg.,, Detroit, Mich., has a stock a hundred times larger than an individual jejweler would have. You, therefore, have one hundred chances of getting exactly what you want from them to one from the local jeweler. Besides their catalog illustrates and describes the articles exactly as they are. If not entirely satisfactory in every way the company guarantees to make it so. No matter what you want in the way of jewelry, send for the free catalog—a jewelry store between the covers.

Some Doubt

They were visiting and listening courteously to the daughter's efforts on the piano. "Isn't that a beautiful melody?" asked one. "Is the word melody or malady?" asked the other.

No-Rim-Cut Tires 10% Oversize

Nearly Half the New Cars Use Goodyears

Nearly half the cars which are built this year will be equipped with Goodyear tires.

At the New York Show, nearly half the show cars had Goodyear equipment.

Think of that—almost as many Goodyears as all other tires together.

And far more cars are now running on Goodyears than on any other tire in the world.

What Led to This Condition?

It is well to ask what led to this condition.

There must lie, somewhere, some immense economy. For men in these days keep good track of tire mileage.

And the result is this:

In the past year alone, more Goodyear tires have been sold than in the previous 12 years put together.

Two Savings

Two features in No-Rim-Cut tires mean an enormous saving.

One is the device which makes rim-cutting impossible. Without that device—with the old-type tire—23% of all tires become rim-cut.

The other is the fact that these patent tires are 10% oversize.

That 10% oversize, under average conditions, adds 25% to the tire mileage.

Non-Skid Treads

Then we invented a Non-Skid tread which excels every other non-skid.

It's a double-thick tread, made of very tough rubber, filled with deep-cut blocks. It grasps the road-surface with a bull-dog grip.

This thick, tough tread is immensely enduring. And the blocks spread out so the strains are distributed just as with smooth-tread tires.

This long-lived Non-Skid became at once the favorite Winter Tire.

Any Man Can See

Any man at one glance can see these advantages.

You can see why these tires can't rim-cut. You can see the oversize. And you know without telling that these things save money.

Then this tire, remember, is the final result of 14 years spent in tire building. For 14 years the ablest of experts have here worked to solve your tire problems.

About 2,000,000 Goodyear tires have now been tested out. As a result, these tires far outsell any other tire in the world.

You who pay tire bills should find out the reason. Make a test of No-Rim-Cut tires

---

Write for the Goodyear Tire Book—14th-year edition. It tells all known ways to economize on tires.

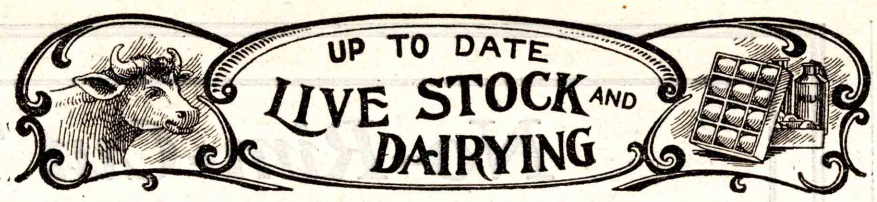
W.F. YOUNG, P.D.F., 102 Temple St., Springfield, Mass.



A YEAR OF AMERICAN LIVE STOCK

DURING the year 1912 the number of horses increased in this country 58,000; mules increased 24,000; milch cows decreased 202,000; other cattle decreased 1,230,000; sheep decreased 880,000; hogs decreased 4,232,000.

The decrease in hogs is remarkable, and it appeals to every farmer to do his best to raise more hogs. There is no question as to the safety so far as price and marketing are concerned. Suitable pasture, however, should be depended upon for their principal growth.

The next greatest decrease is in cattle, which, including milch cows, is 1,432,000. This may be largely attributed to the unfortunate habit that has grown upon farmers, of selling or killing the veal calves. We wish some means could be devised to prevent that; but so long as prevalent prices are offered for young calves a great many will be sold. The decrease in milch cows is somewhat alarming, because it means a lack of milk, butter and cheese. In this also the farmers are the only ones that can come to the rescue. They can if they will raise more heifers and increase the number of milch cows.

Sheep may also be raised with confidence that there is no danger of an over-supply. Many farms that are specially adapted to sheep raising, and that are not so well adapted to anything else, have not a sheep on them. The income of such farms may be greatly increased by growing on them a good flock of sheep.

In spite of the prediction that the electric car and the auto would drive the horse out of use, the number of horses and mules increased during last year, and what is still more remarkable, the price increased also. One would expect the price to go down as the number of horses increased, especially under conditions that apparently made horses less needed, but the price actually went higher. That the prices of milch cows, cattle, sheep and hogs went higher was to be expected because the number of these animals diminished. Farmers may safely increase the production of all these animals; and all the more so when we remember that the price of all soil products went lower during 1912.

MORE LIVE STOCK

THERE is a need for more stock in almost all parts of the country. We see no reason why the number of live stock, milch cows and other cattle, sheep and hogs, should have decreased during the last few years. People are as well prepared to raise these animals as they ever were, and demand and prices have been good. There is every encouragement for the growth of this stock, and we don't know why farmers have let up on it. Is it for lack of pasture land? Has the universal insistance for increased crops given the farmers a craze for cultivation and production? It is a fact that pastures properly managed, made rich in forage growths and well stocked, may be made to yield greater financial returns, acre per acre, than the cultivated fields, and to those returns are to be added the saving in labor and the improvement of the soil.

We, therefore, urge an increased production of live stock. Stock farms are always the most fertile, and they are freer from weeds and other troublesome growths; and stock farmers are always recognized in their neighborhoods as the most prosperous. Make a start, or increase what you have, with the very best breeds, and push on in numbers as well as in good qualities. The most certain places for increasing farm wealth in this country are the pastures and barn lots.

HOME OF SUBSCRIBER S. C. SANDY, SHOWING SOME FINE CATTLE ALSO. PHOTO BY DAWSON.

THE EXPECTED COLT

THE season is now here when colts are expected where there are brood mares. In many cases the mares are needed for work, and that is all right if judgment is duly exercised. It is better for the mare that is accustomed to work to be kept at it moderately until near the time of foaling; but she should not be made to do hard work, to put in an exhausting day, nor should she be subject to a hard pull. The latter should be avoided strictly, no matter what the condition. A steady day's pull, such as breaking heavy land, should not be allowed. See to it that the work is moderate. After the colt has come the mare should have several days of absolute quiet and rest. A special precaution may here be mentioned. If the mare is not accustomed to run freely in pasture, do not put her on green grass until the colt is a week or more old, and then let her to the grass only a little while at a time until she becomes accustomed to it. Otherwise the life of the colt is endangered.

Looks Like It

"Well, you know a man reaps what he sows."

"Not always, I think."

"How is that?"

"When a young man sows wild oats he is very apt to get lemons."

EMPIRE
Cream Separator Factory
WORKING NIGHTS

We owe a great deal to our friends, among whom are many very particular people. They recommend Empire Cream Separators so enthusiastically that our factory is compelled to work nights to meet the demand.

Empire Cream Separators

are wonderfully efficient, remarkably sanitary and world renowned for easy, quiet running and great durability.

The adjustment and care of an Empire could not be simpler. When properly adjusted and cared for, the Empire will start under the weight of the short, light crank and the machine runs so quietly at full speed, that it would not wake the average child asleep in the same room. You may have

COST OF KEEPING HORSES

IS THE feed consumed by the horses an item of expense to you? Then we assure you that expense may be reduced by proper care of the animals. It has been demonstrated many times and in many ways that horses well housed, regularly groomed, and given plenty of good water, will keep in better condition on less feed than those not so cared for. The Ohio college of agriculture has made a thorough test of this matter, their experiment involving more than a thousand horses. The difference in every case was pronounced and emphatic. Care and good treatment always resulted in an opportunity for the saving of feed. Cleanliness and comfort are important elements. The spring and summer work team should always have a convenient pasture or pasture lot to run in during the nights. If the owner prefers; the horses should not eat much grass, the pasture or lots, perhaps a lot is preferable, need not be rich in forage, but there should be enough to make it attractive to the animals. The open is the native place for the horse, and it will rest better, more quickly recover from the wear and fatigue of the day's work, when it can thus move about at pleasure and pick at the grass no matter how short.

THE USEFUL SHEEP

There is no animal on the farm that is more capable of responding to different methods of treatment and adapting himself to different environments than is the sheep. He can be bred into almost anything of the sheep kind. Long, coarse wool or short, fine wool, horns or no horns, black or white, a big carcass for mutton or other modifications have been produced, and all are money makers when properly handled by the right man.

Very Ignorant

"Pop, our new teacher don't know anything."

"Why do you think that?"

"She held up an apple and had to ask the class what it was."

Must Have Been It

"I tell you that man has a heart of gold; a grip of iron, and a will of steel."

"Then I suppose he is sure enough a man of mettle."

Off and On

"Doctor, I'm troubled with boils off and on."

"I wouldn't let those that are off trouble me."

Every farmer is familiar with the horse, but only a thorough training will enable the owner or driver to safely handle the kickers, balkers, biters, shyers and runaways.

In Pleasant Hill, a town of less than a thousand souls, situated twenty miles north of Dayton, O., is the perfectly equipped, mail-course education institution where Prof. Jesse Beery, assisted by a competent staff teaches all, no matter where they live, through the mail, the mastery of the horse.

Prof. Beery was born and reared in the little town where his enormous educational enterprise is so successfully conducted. Born on a farm, even from his earliest youth the most vicious stallions became pets in his hands and the most wonderful part of his widely known horse training is his ability to teach others through his correspondence course to become as expert in handling fractious horses as he is himself.

Annually Prof. Jesse Beery's students are invited, generally in midsummer, to the school and the gathering is always large and enthusiastic. The little burg of Pleasant Hill has only one steam railroad and one interurban and the attendance has in the past severely taxed the transportation facilities from Dayton. For Home-Coming, August 12, 13, 14, 15 and 16, 1913, Dayton, O., will be the selection where now are promised a gathering of 10,000 Beery students. The guests of the school will be entertained with fancy riding and roping, rough riding, broncho busting and saddle horse contests of every description.

Prof. Beery's correspondence course of teaching is most systematic, every thing is done with clock-work accuracy through the aid of a large and competent staff in a modern building equipped with every device necessary for an equine correspondence school.

SEE AND TRY A DE LAVAL CREAM SEPARATOR

Be Your Own Judge

We cannot believe that there is a sensible man living who would purchase any other than a DE LAVAL Cream Separator for his own use if he would but SEE and TRY an improved DE LAVAL machine before buying.

It is a fact that 99 per cent of all separator buyers who do SEE and TRY a DE LAVAL machine before buying purchase the DE LAVAL and will have no other separator. The 1 per cent who do not buy the DE LAVAL are those who allow themselves to be influenced by something other than real genuine separator merit.

Every responsible person who wishes it may have the Free Trial of a DE LAVAL machine at his own home without advance payment or any obligation whatsoever. Simply ask the DE LAVAL agent in your nearest town or write direct to the nearest DE LAVAL office.

The new 75-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

Settle Important Things First

THE time to investigate harvesting and haying machines—the time to know which binder or mower is the best for you to buy, is before, not after, you have given your order. The success or failure of your whole season's work, from the plowing of the ground to the ripening of the grain, depends upon the quality and efficiency of the machines you take into the harvest field. Therefore, the selection of the harvesting machines that you will use is the most important decision you make. Settle that first—now—before the busy days of the season are on. Get catalogues from your local dealers, or send to us for them, and study carefully the harvesting and haying machines and tools made and sold under these names:

Champion Deering
McCormick Milwaukee
Osborne Plano

Bear in mind when you come to pay down your money that these machines have harvested the grain, and cut and cared for the hay from fields in every part of the world, and some of them have been in use in the United States for more than seventy years. The efficiency gained through this long period of field work under practically every conceivable condition adds nothing to the cost of the machine. In fact, it is because of this long experience that you can buy these time-tried and field-tested machines at the lowest market prices for reliable harvesting and haying machines and tools.

Another important point to bear in mind when considering the purchase of a harvesting or haying machine is the facility with which you can obtain repair parts if they should be needed. Delays at harvest time are too expensive to take any chance with them. You can secure practically any part of an I H C harvesting or haying machine within a few hours of the time that an accident occurs, and when you get the part to the binder it will fit in the place of the broken one.

To get the best work out of a binder it is imperative that the twine used be strong and smooth, strong enough not to break under the strain of tying the bundle and smooth enough to run freely from the can to the knotter. Twine that will do this is sold by I H C dealers under the trade names, **Champion, Deering, McCormick, Milwaukee, Osborne, Plano,** and **International.** There are four grades of each brand, namely, Manila, Pure Manila, Sisal, and Standard.

Your neighbors know I H C machines and binder twine. They will tell you what their experience with them has been. The I H C local dealer can furnish you with catalogues and full information, and will explain fully all the good points of the machines he handles.

You can get catalogues from the local dealer, or by addressing a letter to the

International Harvester Company of America

Chicago U S A

The Source of Phosphorus

Its Necessity to Maintain Balanced Fertility

AS WE all know, the three principal elements of plant food are nitrogen, potash and phosphorus. The normal soils of the north central states contain an inexhaustible supply of potash. The amount of potassium contained in the plowed soil of an average acre being about 35,000 pounds and still more in the subsoil. The air contains an absolutely inexhaustible supply of nitrogen which can be freely utilized by growing clover, alfalfa and other leguminous crops and the nitrogen which they contain can be very largely returned to the soil. On the other hand, phosphorus is present in normal soils in limited amounts and must be purchased and applied in order to keep up the fertility of the soil and furnish a balanced plant food.

The great source of phosphorus is the natural phosphate rock which is found in vast deposits laid down in beds somewhat the same as limestone. These deposits are found in only a few states, the largest output at the present time being mined in Florida and Tennessee. There are smaller deposits also in South Carolina, Kentucky, Arkansas and in some of the far western states, Wyoming, Utah, Idaho and Montana.

There are two commercially important classes of phosphate rock in Florida, the hard rock phosphate and the land-pebble phosphate. The methods of mining these two classes differ considerably. In the hard rock mining the material is either dug out or dredged out. In the pebble deposits hydraulic mining is employed. The two important classes of phosphate rock in Tennessee are the brown rock and blue rock. The blue rock is mined by tunneling and blasting and the use of compressed air drills. The brown rock is a porous rock and lies from two to twenty feet under the surface of the ground. The overburden of earth is first removed by steam shovels or scrapers, and the phosphate rock, together with the matrix, in which it is frequently embedded, is dug out with picks and forks and hauled to the plant in tram cars.

In order to remove the impurities, the Florida land-pebble rock, and the Tennessee brown rock is subjected to a washing and drying process. When the tram cars come from the mines they are hauled to the top of a washer, and the rock dumped into a hopper, streams of water are played upon the mass, washing the material down to a crusher, which breaks up the larger lumps of rock, then the rock is conveyed over a series of screens and the material passing through these screens goes to a revolving rinser, where it is thoroughly sprayed. The portion passing through the perforations of the rinser falls into a hopper, being finally discharged into draining bins, after the water has partly drained off the washed product is drawn out and sent to the driers.

The old kiln method of drying the rock on ricks of wood is still used to some extent, but most of the rock is dried in mechanical dryers.

At the present time commercially available rock is expected to carry a percentage of phosphorus equivalent to 60 to 80 per cent tricalcium phosphate or bone phosphate of lime. The bulk of the high grade material, that running above 75 per cent bone phosphate of lime is shipped abroad for the European market. The fertilizer factories of our own country use the next grade of rock running from 65 to 75 per cent bone phosphate of lime. The acid phosphate which the fertilizer dealer sells is made by treating the phosphate rock with sulphuric acid; and the ordinary "complete" fertilizer is made by adding to the acid phosphate materials to make up the requisite percentage of nitrogen potassium. The lower grade of rock running from 60 to 75 per cent. bone phosphate of lime is run through a grinding mill, pulverizing the phosphate very finely, so that 90 per cent. will pass a 100 mesh screen (a sieve having 10,000 holes to the square inch), and this material, known as raw ground phosphate rock and sometimes called "floats," is used in its natural state as a fertilizer. It is applied directly to the soil in connection with green manures or stable manure.

Experiments extending over a period of several years, have been conducted at the Agricultural Experiment Stations of Illinois, Ohio and Wisconsin and their bulletins state that finely ground phosphate rock is the most

economical carrier of phosphorous when used in connection with decaying organic matter. If the soil is deficient in this, otherwise known as humus, the acid treated rock should be used.

One of the most important factors that has accompanied civilization has been the productiveness of the land, but if productiveness has been important in the past it will be of much more importance in the future.

The only way to supply an abundance of food to the increasing population of the future is by increasing the productiveness of the land. The lack of phosphorus is what limits crop yields on those great soil areas in the corn belt, in the wheat belt and in the cotton belt, which are producing and must produce the great bulk of the crops required to feed and clothe our fast increasing population.

Increasing the productiveness of these lands, and the low cost at which it can be accomplished by the use of ground phosphate rack, will appeal to every well-informed person. To get the information send for Bulletin No. 174, April, 1909, Agricultural Experiment Station, Madison, Wis., Circular 149, April, 1911, and Circular 157, March, 1912, Agricultural Experiment Station, Urbana, Ill. Also, "Agriculturally Ground Tennessee Phosphate Rock as a Fertilizer" by Robbin Jones, Nashville, Tenn.

NO SCARCITY OF BREAD

DISCUSSING the notorious Lever bill, which makes enormous appropriations of state and national public money under pretense of teaching better farming and increased production, the Woman's Home Weekly, of January 4, has this to say:

Census figures recently issued, show that exports of wheat will exceed 100,000,000 bushels for the year 1912, as against 83,000,000 in 1911, and 62,000,000 in 1910. In two years, therefore, our wheat exports have jumped from sixty-two million to one hundred million bushels! Superficially, it would seem that we are producing an abundance of wheat—that every person in the United States is amply supplied with bread and that we have a surplus for export of 100,000,000 bushels.

Our surplus of corn and other crops show in like proportion. But even this surplus production is not proof that everybody is abundantly supplied. There are conditions between the fields and the eaters that prevent supplies from reaching the needy. The fact that some do not get enough and that others pay too much for what they do get is known to such men as Representative Lever, and without an inquiry into the cause they conclude the farmers are not producing enough, and promptly take heroic measures to increase production. What is needed is better distribution. Our glutted central market system of marketing makes it more profitable to export our products to foreign countries than to distribute them to the needy of our own country. Those who earnestly wish to supply our people's needs should help to adopt a system that will find the need and supply it at equitable prices instead of the one we now have that rushes crops to market as soon as they are harvested, thus glutting the central markets and leaving the interior unsupplied.

Guided By It

Read These Letters

I have been in the hog business for 30 years and have tried every known remedy for hogs, but have never found anything equal to your Sal-Vet. It certainly does the work and is easy to feed. I feed it to little pigs, boars, pregnant sows and find it O. K. I will never be without Sal-Vet.

C. F. MARSHALL & SON,
Per G. F. M. Monroe, Ia.

"I had a lot of sick hogs and I lost five of them. I began feeding them Sal-Vet, my losses stopped and the hogs soon got into a fine, healthy condition.

V. P. UNDERWOOD,
R. D. No. 1, Roachdale, Ind.

While I cannot say positively Sal-Vet kept my hogs from having Cholera, I had no such sickness while my neighbors almost without exception lost hogs from Cholera. I certainly have great faith in Sal-Vet and it is all and more than you claim for it.

J. C. CONOVER,
Chrisman, Ill.

I used your Sal-Vet regularly while feeding a bunch of fattening hogs and can say it is just the article. It made my hogs double their weight in 50 days. It is a great conditioner and worm destroyer—E. E. SHULL, LaCynge.

I'll Stop Your Worm Losses I'll Prove It Before You Pay

Don't let worms breed **contagious diseases** among your hogs this year. Don't let them kill off the young pigs and rob you of your season's profits. You can **prevent it** if you will just take "a stitch in time." **Now** is the time when worms begin to get in their **deadly** work. **Now** they are breeding, multiplying by the millions in the stomach and intestines, and if you don't get the best of them, they will surely get the best of you. Let me show you how. I'll get rid of stomach and free intestinal worms in your hogs, sheep, horses and cattle and prove it to your satisfaction (not mine) before you pay me a cent. I'll do it with

Beware of Imitations **SAL-VET** *Look at the Name Carefully*

The Great Worm Destroyer and Conditioner

I've done it for thousands and in addition they write me they never had stock thrive better, look better and bring them such profitable returns. Here is my offer to you.

Send No Money—Just the Coupon

Simply fill in the coupon, tell me how many head of hogs, sheep, horses and cattle you have. I will then ship you enough Sal-Vet to last them 60 days. You pay the small freight charge when it arrives—put it where all your stock can get free access to it—**and they will doctor themselves.** They eat it as they do salt—just as they need it, and at the end of the 60 days if you don't feel **satisfied,** write me and I'll cancel the charge. I take your word as final—I let you act as judge of its merit—I put everything up to you. How can you risk loss—how can you let your stock drag along when they should be thriving, growing into profit when such a fair, open offer like this is put at your disposal? You have all to gain—nothing to risk. Fill out and mail the coupon **now.** Don't put it off—lest you forget. Read the letters above.

POULTRY

INCUBATOR CROWDS OUT HEN

THERE not many years ago nine out of ten farms had never heard of an incubator, today the word is passing from farm to farm that the profits are larger, the work less onerous, the hatches more sure, and the hens are taking fewer holidays—laying more eggs, says R. Harris. Not all on account of the incubators, but primarily on account of the incubator, and secondarily on account of the large amount of book knowledge distributed with it.

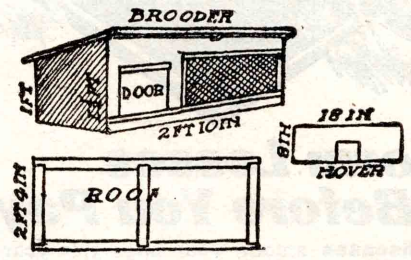
The farmer's wife is doing her share in the profit making. She always has done it, but now she is getting recognition as a partner in the business.

This is having—it has had—its effect, and the result is, farmers are now posted on poultry profits. They will continue to be posted, and those who have been operating incubators will go back to hen incubation only when they return to the old custom of treading out the grain with oxen—only when they are prepared to put the cream separator on the shelf.

Poultrymen who are in the business commercially—whose living depends upon the profits—would as soon think of threshing the grain with the old-time flail as they would of hatching chicks or ducklings with hens or ducks. The thought would be absurd. Without the incubator they would have to go out of business.

BROODER AND COOP COMBINED

I HAVE used all shape and sizes of home-made jug-heated brooders and like best the one made from an old wagon box. All holes in sides and floor were patched up when making it, and a roof put over one end. This roof is so put on that it may be raised



Brooder and Brood Coop Combined.

and lowered, writes Mrs. O. M. Spencer, of Van, Mo. It is waterproof, but gives free circulation of air. A partition put through the box makes the hover about three feet square, with two doors for chicks to run in and out. On damp or cold days and every night a lantern is kept burning in the hover, which has a cloth hanging from the top that bags down onto the backs of chicks. The light does not annoy them. Indeed chicks always seem to prefer to huddle in a cold light place rather than a dark warm one. The rest of the wagon box is covered with poultry netting to keep out the other chickens. On rainy days it is well to spread a canvas over the netting. Keep the young chick dry by all means, and keep his crop full. A chick fed all he wants from the time he is thirty-six hours old will never overeat. On cold or stormy days I feed and water the chicks in the run and shut them back in the hover till they get restless, then feed and water again.

THE DUST BATH

ONE of the commonest winter defects in the poultry house is the absence of the dust bath. It is just as natural for hens to take a dust bath, wallow in the dust, as it is for well raised people to wash their faces. In the winter or in rainy weather there is no chance to take a dust bath out of doors, hence provision should be made for it in the house. A large shallow box with road dust or wood ashes, or both mixed, is a good arrangement for the dust bath. If the box has no bottom and rests on the ground it is better.

Poultry Chat

Mrs. J. B. Howe

The weaning time is quite a trying period for the growing chicks. They have been coddled by their loving and attentive mother and have flown with glad wing at her cheery call; have rustled under her protecting wing, or close by her side, when the nights grew warmer, but all of a sudden this model mamma-hen forgets to call them. She slips away and leaves them by themselves; and finally changes her roosting place entirely, leaving them quite disconsolate. Some chicks seem to take this treatment philosophically, while others seem quite broken-hearted. We have seen broods, otherwise quite tame, grow shy, suspicious, and even lose their appetites at this time.

If the broods are valuable, an occurence like this means quite a loss, for, if anything occurs to check the growth of a young chick, for even a few days, it may so stunt it, that it never quite regains its former thrift. To prevent this stoppage of rapid growth, these broods which have recently lost the mother by natural desertion, or any other cause, should receive a little extra supervision and attention. Change the feed a little. Put something in it to tempt their appetites. Lure them away to one side at feeding time, where the older chicks will not domineer over them. Talk to them crooningly, and, yes, lovingly, and they will soon learn to consider you their friend, and give you the mother's place in their affections. Wherever they hear your voice, a flutter of wings will speedily announce their presence, and the best of it all is, that you will soon begin to note a change in their appearance for the better. They will lose that shrinking attitude of fear, will gather in little peaceful clusters, unafraid at your approach; while they take on that sleek, well-feathered, appearance, which delights the heart of the fancier and poultryman.

Chicks that have been hatched in an incubator and reared in a brooder, have, in fact, never known a natural mother, but have looked to the attendant for all the necessaries of life; never quite forget the hand which fed them, the voice which soothed their chick-hood ills. Even when grown to the dignity of hen, and motherhood they have a peculiar chat in hen language, whenever the aforesaid personage appears. They may forget, and desert their own chicks, when they begin laying again, but they never forget her.

It is poor policy to suffer the young broods that are weaned to remain huddled on the floor of their baby coops. If commodious enough, some low roosts should be made, and let them early learn to take refuge on them. It is more sanitary and healthful in every way. If the roosts are, say, two inches in width, no danger need to feared regarding crooked breast bones. The coops should be well ventilated these sultry nights, without direct draught on them.

140 Chicks from 140 Eggs

This World's Championship Record is not uncommon with users of my **Belle City** incubator. Many are doing this right along. The United States government is one of my 201,840 **Belle City** users. This book can save you $100 this summer. It describes white diarrhoea or bowel trouble. The cause and tells of a cure. BOOK ABSOLUTELY FREE FOR THE NAMES.

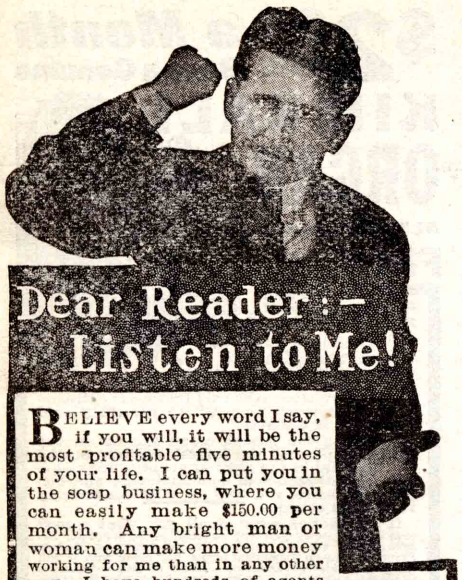
Raisall Remedy Co., Blackwell, Oklakoma



Dear Reader:—Listen to Me!

BELIEVE every word I say, if you will, it will be the most profitable five minutes of your life. I can put you in the soap business, where you can easily make $150.00 per month. Any bright man or woman can make more money working for me than in any other way. I have hundreds of agents making $2,000.00 per year. I have always been in the agency business myself and know the business from A to Z. I teach you how to make sales and make you successful. I have made over One Hundred Thousand Dollars selling Washing Machines and many of my old agents have made their pile and retired.

I now have a much better proposition to offer you—one that makes my agents more money, and I like the business better myself. The reason my agents have been so successful is the fact that I do not handle junk, tinware or cheap John goods of any kind that never lead to repeat orders. I give no premiums, but my agents get hard cash for their work and soon have money in the bank. It's repeat orders that make money in any business. Go into any home next Monday morning—you'll find them washing; go to their neighbors, they are washing too—in fact, it's the same thing all over the country. The demand for soap is unlimited and repeat orders never cease. Now, what does this all mean? It means someone is getting the enormous steady profit from your territory, which can be yours.

There is big money in the soap business. I give my agents the big end of the profit—a profit so large that I hesitate to state in this public manner what it is, but will be glad to advise you confidentially when you write me. Suffice it to say for the present that you will be satisfied. I give you a chance to make such a big profit that you'll be more than satisfied with your income and willing to stay with me year after year and be one of my loyal representatives. I personally teach every agent how to make money and make it fast. My plan has been a great success and I'll give it to you FREE. Now, I want to say to every man or woman who is anxious to make money and better their condition, write me. Don't lose a moment's time, but write me at once and address your letter to W. W. TERRIFF, *President of The Wolverine Soap Co.*, 170 Water St., Portland, Michigan.

The Hen House for Hens

By Robert A. Harrison

IS THE hen house for man or for fowls? Is the first aim in building a house to satisfy the taste of the owner or to provide for the nature of the laying hen? In reply to these questions I wish to set forth a few facts.

The first consideration in building a house for laying hens is to meet the demands of the laws which govern the physical nature of the occupants. Among these demands may be mentioned sanitation, exercise, warmth, privacy, convenience. The second consideration is to provide for the owner's economy (in time, labor and material), also convenience (in feeding, cleaning, and gathering eggs.)

There are four general physical habits of the laying hen. She scratches, feeds, lays and roosts. Therefore she should have rooms for scratching, feeding, laying and roosting.

There are four general characteristics of the laying hen to be considered. She is affected by the weather, she is easily excited, she chooses privacy, and selects the highest point in the house to roost. Therefore she should have a house to meet the changing conditions of weather (cold, heat, darkness, and light). Also the house should furnish a retreat, privacy, and the highest point for roosting.

I can show best how all these considerations are met by mentioning a house which I built in my back yard at the parsonage in David City, Neb. The house has met every requirement, and has tested 100 per cent. efficiency in egg production.

To provide for a surplus of twenty pullets of a flock of thirty-eight, April 30 hatch, I built a house six by eight feet, ground floor, at an expense of $12 for material. The first floor was put one foot below the surface of the ground. Then above are the feeding, laying and roosting floors respectively. Windows are set at half angle to catch the direct light and heat rays of the sun for the scratching and feeding floors. The cloth ventilation is placed at one end of the fourth or roosting floor. Litter, feed and water are placed from the south side. The eggs are gathered and the roosts are cleaned through drop doors at the north.

Now for the results:

The twenty pullets in the newly planned house laid 363 eggs during December; while the eighteen pullets of the same hatch, in an old style house of twice the dimension, equally warmed, lighted, ventilated, layed one-third less eggs per pullet on the same rations during the same month. How is the difference accounted for? Simply the newly planned house meets all the conditions governing the nature of the laying hen. It also provides economy and convenience for the owner.

POULTRY NOTES

Given the same care and feed, purebred fowls will make greater profit than mongrels.

A splendid feed mixture for laying hens is equal parts of cracked corn, wheat and oats, which should be scattered in the litter.

Bran or middlings and beef scraps should be kept in receptacles to which the fowls have access at all times.

Plenty of exercise increases the egg yield.

When wet mashes are fed, be sure they are crumbly and not sticky.

Infertile eggs are produced by hens having no male birds with them and they are decidedly the best for market purposes.

Removing the male bird has no influence on the number of eggs laid by the hen.

Uniform products command the best price. Purebred fowls produce uniform products.

Begin marketing the cockerels as soon as they attain marketable weight.

White wash is very effective against vermin.

Factory Prices for the Asking—on Genuine Witte Engines

FREE Engine Book

THE genuine Witte—conceded the best farm engine in America—now offered at actual wholesale prices. Yes, this is the engine that has lead the gasoline engine field for 25 years. Dealers have been getting the highest prices for the Witte. *Now* you can get one at actual factory price—what the dealer paid—and have the finest engine in your county.

Our Gas Well Saves You Many Dollars More

We do more than give you ordinary factory prices. We are the *only* manufacturers who have our own gas well. Power, testing, forge, foundry and heating fuels cost us nothing. *You* get the benefits. But you couldn't afford to own any other engine even if the Witte cost twice as much—because an average of 1 cent for every horse-power per hour *cuts gasoline bills in half*—pays for your engine in no time.

Every part *guaranteed* 5 years—*full rated horse power on minimum gasoline* guaranteed too. Built in all sizes from 1½ to 40 h. p., every one *tested to 10% overload.*

Horse-Training and Colt-Breaking

Successfully Taught by Mail. Book Free!

Prof. Jesse Beery, King of Horse-Tamers and Trainers, Will Send Horse-Trainers' Prospectus FREE

If you love horses and are ambitious to make more money, you will be intensely interested in the remarkable Horse-Trainers' Prospectus, which tells all about it. After a wonderful career as a professional horse-trainer, which brought him fame and fortune, Prof. Jesse Beery, acknowledged to be the World's Master Horseman, is devoting his time to teaching his noble profession to a few carefully chosen pupils, entirely by correspondence.

PROF. JESSE BEERY
World's Master Horseman

$1,200 to $3,000 a Year at Home or Traveling

Hundreds of Beery's graduates are making all kinds of money training horses, breaking colts, teaching horses to drive without bridle or lines. Owners gladly pay $15 to $25 a head to have their horses tamed, trained, cured of bad habits, or to have green colts properly broken. A good trainer can always keep his stable full of horses.

Is Your Horse Vicious, Tricky, Balky?

You can cure any horse of bad habits and actually double its value by this wonderful system Everywhere are unruly, tricky, balky, dangerous horses—"not worth the powder to blow them up." These horses, by the Beery Methods, can quickly be made safe, useful, valuable.

Ignorance of the simple principles discovered by Prof. Beery has cost the lives of thousands He tells his pupils the priceless secrets of conquering the most vicious "man-killers"—enable them to actually **duplicate** his most marvelous feats.

The Beery System Making Money for Thousands

Prof. Beery's graduates in all parts of the world are making money training horses, breaking colts, giving exhibitions, buying up cast-off "tricksters" and "man-killers," taming and training them **and re-selling at high prices.** For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy **a home and an automobile** solely through earnings from training horses as taught by your excellent methods." A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

CLIP THE COUPON, sign and mail at once for the Free Book, written by a man who won fame and fortune, thrilling vast audiences everywhere, by marvelous skill in training horses and man-killing stallions. Send the coupon today. Tell him about your horse. (44)

THE HOME ON THE FARM

A Successful Farmer

Yes, sir, I'm a farmer,
And I raise a lot of stuff,
But I always cease to market
When the buyers have enough.
That is how I make my prices,
And get more than others do.
If you'll read UP-TO-DATE FARMING,
It will teach the same to you.

WHAT WILL THEY BE

AN INTEREST inexpressable in words clusters around every home in which there are children, boys and girls, growing up. What will they be? What ambitions have they, and what ambitions have the parents for them? Much of their future depends upon these things in the homes. As the bodies grow and the muscles develop and increase in strength, useful work should be provided, and an interest therein should be encouraged. This is useful and proper, a stepping stone to a noble future, no matter what the financial condition of the parents may be. We have known men and women, and so have our readers, that seemed absolutely useless in the world. They may even have wealth, inherited wealth, and yet so far as their own lives were concerned they were worthless, mere ciphers in life's mathematics. Whenever we hear young people say "I do not have to work!" we always think of these. It is a great mistake to grow up with nothing to do, and parents should never accept that responsibility.

But there is something more important than physical development and the cultivation of industrious habits, though it is difficult to overestimate these. Mental development, broad views of life, refined tastes, a longing for progress, aspirations for achievement—these are the flowers that bloom along life's path and develop into the noble traits of accomplishment. How can these best be cultivated? In the first place, we trust there is a refined and elevating home influence. Then that there is a love for reading, and plenty of good things to read. In this age of schools and literature is it possible that there are any children who do not read? The schools ought to be the inspiration to noble ambitions and pure and higher aspirations, but we fear the schools sometimes fail in this their greatest mission. There are homes in sight of the school houses in which there is nothing to read, and little or no desire to read. We regret such conditions. They bode ill for the future. Children who might grow and develop upward, and become shining lights in the not distant future, grow and live in darkness, and achieve very little in the years that await them. We want good books in every home, especially the homes on the farm. We want magazines and papers; and we want to cultivate a thirst for reading. Every condition can be improved and we want the young people to be determined to make that improvement.

LOVE OF WORK

WE BELIEVE we never knew but one woman that really loved the work that devolved upon her in the home, and in that case we are not sure but that it was devotion to duty and love of service rather than the love of work. In saying this we are not speaking diminutively of womankind. There are many women whose lives are wrapped up in the home work and in the service of the family. But so many view these tasks as work, and feel that they could be happier if they did not have them to do. What we wish to impress and cultivate is the love of service, the joy there is in doing something for others. That robs labor of its burden and weariness. When a devoted mother who had lost a lovely daughter remarked with a sigh, "If I could only take Madge a drink of water!" it was not the desire for the work that prompted it, but the love of the service. Almost every bit of work in the home is for loved ones, and if that view is taken of it the task part disappears.

THE FAMILY OF L. VANTRESS, LACONA, IA. PHOTO BY DAWSON

READ TO REMEMBER

It is right and entirely proper to adorn the body and secure the best possible outward appearance, but it is more important to adorn the mind with good thoughts, bright ideas, and constant inspirations for higher and nobler attainments.

The self-made man had the advice and assistance of a woman—his mother or his wife.

To help the boys and girls on the farm make the home attractive, the farm life pleasant, and encourage and, as far as possible, gratify the ambition to be somebody.

"Men may live without books, but very few men can live without cooks." It should be the object and pride of every girl to be a good cook.

If the men had to do the cooking the kitchen arrangements would be very different, not that they would know better how to arrange things, but they would see the necessity of changes and would make them.

A writer says decorations on the table whet the appetite, but farmers' appetites seldom need whetting.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

$2.25 a Month Buys a Genuine KIMBALL ORGAN

MUSIC OF THE YEARS

THE spring poets are getting busy, and local editors who are not too conscientious, are swearing some. The following, clipped from an old paper, is not a "node to spring," though it has something of a spring cackle, but it must be confessed that cackle is the music of all seasons. But to be sure not to alarm any one, we put it in such a form that nobody will mistake it for poetry:

Of robin and bluebird and linnet, spring poets write page after page; their praises are sounded each minute by prophet, soothsayer and sage; but not since the stars sang together, nor since the creation of men, has anyone drawn a gcose feather in praise of the trusty old hen.

All honor and praise to the singing that cheers up the wildwood in spring; the old recollections of thing. But dearer to me than the twitter of robin, or martin, or wren, is that botherly cluck when a litter of chickens surround the old hen.

And her midwinter cackle how cheery above the new nest she has made; it notifies hearts all a-weary another fresh egg has been laid; and when the old bird waxes heavy and aged and lazy and fat, well cooked with light dumplings and gravy, there's great consolation in that.

The KITCHEN CABINET

GIVE pleasure. Lose no chance in giving pleasure. For that is the ceaseless and anonymous triumph of a truly loving spirit.

—Henry Drummond.

What to Have for Breakfast

The American breakfast, compared to the English meal, is quite in the beginner's class. Here is a simple breakfast menu for August, taken from an English cook book: Bloaters on toast, collared tongue (whatever that may be), hot buttered toast, marmalade, white bread and butter, brown bread, and bread and milk.

Another—Pigeon pie, stewed kidney, milk rolls, dry toast, brown and white bread, mustard and cress, milk porridge.

A person who could digest such breakfasts as these in August ought to make a good soldier. It is said and justly, that Americans eat too much, but we certainly are low on breakfasts, compared to the English.

We need follow no law except that of the individual in preparing our breakfasts, as each individual has desires peculiar to himself. Fruit is enjoyed by some and a source of distress to another. Cereal is energy to one and "a soggy mass of indigestibility" to another. Coffee, the fragrant, refreshing cup, a joy to many, is blamed for much of which it is innocent.

Then there are the "no breakfast" advocates, an arrangement which certainly has its good points, for it does away with the hurried meal presided over by no house mother or a frowsy one. Such a beginning is not a good start for the day's work.

A dainty breakfast, well served, is of far more value to the individual than the mere food properties served. A far better day is in store for the man who leaves his breakfast table in an agreeable frame of mind, and he will return, usually, in the same frame. No greeting, however smiling, or dinner well prepared, will atone for a hurried scramble at the breakfast table.

It has been well said that children to be well trained, should begin with their grandfathers. To have and serve a successful meal, we must begin the day before. A meal well planned is usually a successful one.

To make children happy in the home does not mean that they must have their own way, or that they must be petted and humored until they are spoiled. A spoiled child is seldom happy, and it always makes everybody else unhappy. The kindly common sense treatment is what makes good and happy children.

Burpee's Seeds are supplied every year direct to more American planters than are the seeds of any other growers. Do your seeds come direct from Philadelphia? If not, we should like to make your acquaintance. Simply send us your address (a postal card will do) and you will receive **Burpee's Annual for 1913,**—a bright book of 180 pages, which has long been recognized as "The Leading American Seed Catalog." Kindly **write to-day!** Address

DEFORMITIES CURED

CLUB FEET of any variety, and at any reasonable age, can be made straight, natural and useful. No plaster paris, no severe surgical operation, and the result is assured.

POTTS DISEASE when treated in time should result in no deformity; paralysis can be prevented and the growth not interfered with. Write for information and references.

SPINAL CURVATURE Recent cases usually make good recoveries and even those of long standing do well. No plaster paris, felt or leather jackets. Write for information and reference.

HIP DISEASE in the painful stage can be relieved and the inflammation permanently arrested. Shortening, deformity and loss of motion can often be corrected. No surgical operations or confinement.

INFANTILE PARALYSIS We can refer you to many responsible people all over the country, whose children, afflicted with Infantile Paralysis have been practically restored at this Sanitarium.

DEFORMED KNEES AND JOINTS of many varieties yield to our methods of treatment, and if interested you should know about it.

This is the only thoroughly equipped Sanitarium in the country devoted exclusively to the treatment of crippled and paralyzed conditions.

ILLUSTRATED BOOK FREE Write us for illustrated book which will be sent free on request to any address.

THE McLAIN ORTHOPEDIC SANITARIUM

The Telescope of Speech

The astronomer, by the power of his telescope, becomes a reporter of the movements of a hundred worlds greater than ours, and the student of celestial activities millions of miles away.

He points his instrument at any spot in the heavens, and his sight goes rushing through space to discover and inspect a star hitherto unknown.

Up to the power of his lenses, his vision sweeps the universe.

As the telescope may be focused upon any star, so the telephone may be focused upon any person within the range of its carrying power.

Your voice may be directed anywhere in the Bell System, and it will be carried across country at lightning speed, to be recognized and answered.

The telescope is for a very limited class, the astronomers. The telephone is for everyone.

At the telescope you may see, but cannot be seen. At the telephone you may speak and be spoken to, you may hear and be heard. By means of the Bell System this responsive service is extended to the whole nation.

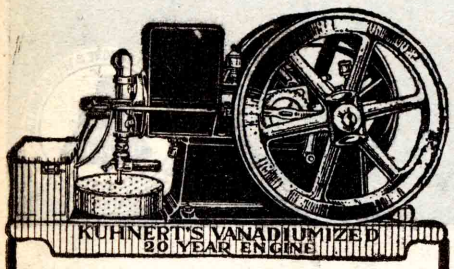
BIG FREE BOOK ON CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and milk. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; all about the causes of "clover sickness" and how to deal with it. Hundreds of other questions, covering sixteen clover varieties, are fully answered. Ordinarily this book sells for 35c, but for a short time we will mail a copy free, or until a certain number have been distributed. Write at once.

GALLOWAY BROS.-BOWMAN CO., BOX 508 K WATERLOO, IA.



My 20-Year Engine Sent to You FREE

L. C. Kuhnert, Jr. Co. Dept. 8103 Chicago, Ill.

An Act of Providence

MANDY HARRISON carefully padded the bottom of the egg crate with papers, slipped the proper square of pasteboard over the padding, put the egg filler in place, and mechanically dropped the great creamy shelled eggs into their compartments, carefully discarding those not clean, imperfect in shell shape and those that were small.

"Two dozen unavailable," she sighed as she dropped the last perfect egg in place. "Two dozen not fit to send, and sixteen, seventeen dozen and eleven that are," She paused thoughtfully.

"It will take two or three days to get enough to finish filling the crate. Hen's aren't laying so good now, all want to set or have chickens, and I'm owing instalments on 'most everything."

Mandy caught up a scrap of bent cardboard, which had slipped from among the papers, discovered that it was a picture of herself, which succumbed to the attack of some infant visitor. She began to scribble.

Instalments I've got to pay:

Father's coffin	$1.00
Doctor's bill	1.00
Ditto on shoes for Sammy	1.00
Ditto on medicine for ma	1.00
Shingles for leak	1.00
Putting same on	1.00
Total	$6.00

"Dear, dear!" she sighed. "The eggs will only net enough to pay those things, not a cent over, even if I get 20 cents for them, and likely as not they won't fetch more than 18 cents a dozen.

Mandy stared at the list before her, but the items remained fixed, not one vanished under her severe scrutiny. "Well, take it, take it all—you old figures, you!" then turning the card she began writing on the other end of it. The things I want:

I want a new dimity dress with pink rosebuds in it.

I want a big ribbon for my hair.

I want a pair of stockings, absolutely whole.

A pair of pumps with high heels.

A piece of chiffon to fix my old hat.

I want Jim Patterson to come back.

She wrote furiously, punctuating each item with a decisive period at the end, indulging herself just once in her bare life, the luxury of mute expression.

She paused after rereading, flushed to the heavy waves of her dark hair, gave the cardboard a vicious twist which rent it in two and flung it aside, crushed the remaining egg fillers into the unfilled space of the crate, gathered up her baskets, and rushed down cellar. She came up with a pan of potatoes, which she proceeded to make ready for dinner.

So busy was she with her thoughts of the last item on her list, that she forgot everything else; lost in the remembrance of her simple, happy life, before her father had died and Jim Patterson had gone away. Jim had come to see her as naturally as the morning sun shone into the kitchen window, but—well Jim had gone to the city to advance his fortune.

Jim had written, but his letters were not a bit like Jim, and finally she had stopped answering them, not because she cared too much and felt too proud to continue what seemed to her to be a one-sided corres-

Mandy's face flushed, and she peeled the potatoes fiercely, flung them into their rinsing water with a splash that spattered the water over her face and orto the clean floor beside her.

"Well, for mercy sake, Mandy Harrison," called a voice from the doorway, "What spite you got against those potatoes? The way your punishing them, one would think you'd a mortal grudge against them!" Good, fat Mrs. Morris rolled into the kitchen, drew a chair near the egg crate, sat down and lifted her basket to her ample lap.

"I've just got a fit of the tantrum grumps," Mandy explained lucidly.

You've been crying, Mrs. Morris accused, aghast, for she had never seen the brave, high-spirited Mandy cry. "You've never made a fuss about anything."

I'm not crying—its just the water splashed into my face," Mandy retorted, plunging the potatoes into the kettle of boiling water, with a dash.

Mrs. Morris, noting the surging color in the girl's cheeks, shifted her gaze to the basket she held, saying gently, "I'm wondering, Mandy, if it isn't about time you'll be shipping a crate of eggs. I've a few here I don't know what to do with, 'nless you'll let me tuck them into your box here. You can help me with my new dress, Mandy."

"I'll help you with your dress," Mandy responded warmly, "but you just trade your eggs out for groceries. I ship mine because I just have to have the money to pay my instalments. If I ever do get things paid, I'll never get anything more that way—though it has been awful good of the tradespeople to let me pay by little; but there's never a cent ahead—never!"

"There will be," Mrs. Morris assured comfortably. "Now I'm too penurious to pay for cutting my dress so I'll just slip these eggs into the crate. You're just born to cut and fit.

She stooped heavily, as she cautiously slid the eggs into the fillers and after the last space was filled she caught up the torn photograph, upon the back of which Mandy had made her memorandum, and tucked it well down in the crate to tighten a slight looseness, which might tend to an undue shaking of the eggs.

"There—that's as tight as Deacon Pettybottom's purse strings. Now you nail it up and I'll have Hiram take it along to town this afternoon."

"You're an angel," Mandy declared rapturously as she caught the ample figure in her young arms and squeezed it vigorously. "I'll cut your dres sthis very day while mother takes her nap."

"Huggings like that can't be called real hygienic," Mrs. Morris gasped, "but they're mighty warming to the heart."

On the following Saturday Mandy received an astounding check for her eggs and a brief letter of explanation:

"Dear Madam—Your eggs are of such fancy quality I have closed them out to special customers, and have contracted for all you can send in future. Guarantee a price as fancy as the eggs themselves, etc."

Mandy gazed at the check. "Twelve dollars! Why, that's forty cents a dozen! I'll be able to buy everything for mother and Sammy!"

According to her custom she began making swift figures on a scrap of paper. She crossed out items and replaced them with others, until she had a list, the amount of which tallied with the face of the amazing check.

"See, mother!" Mandy cried, racing into the room where her mother lay, propped in a big chair with many pillows. "See! My check, my letter and my list!"

Mrs. Harrison smiled at the girl's bright chatter, took the check limply, raised herself a little, read the letter and sat upright, then she caught the memorandum Mandy had prepared:

"But daughter!" she protested, wiping her eyes, "there isn't a single thing for yourself—you've jjust got to get some things for yourself!"

"I will," replied Mandy promptly, "next time. I'm going to buy up the neighborhood eggs, and sell them fancy, I'll be a bloated bondholder before long, and you'll see the ribbons and things I'll buy myself, but you're going to have a hammock and a few things you need before I begin to luxuriate." Mandy kissed her mother ecstatically. "It'll be just heaven to have you around again."

Mandy drove into town that afternoon, spending her money happily, though she did shed tears when the doctor refused further payment for his services.

"Everybody is so good," she murmured, as she started down the main street toward home. She was halted by the railroad tracks, the evening passenger train having rolled in. Mandy always liked to watch the train and the people who traveled upon it. She was frankly interested in the drift of people who went past her on the sidewalk just beyond the road where her horse was halted.

Suddenly across her vision rose the figure of a man, like, yet unlike the one of whom she had long dreamed. The man caught her look, paused, stepped forward, then hurried to the buggy where the girl sat dazedly looking at him.

"This is surely my lucky day!" cried Jim Patterson's well-known, well-loved voice. "I'm going home with you if you'll let me, Mandy." Jim dropped a bundle into the buggy, thrust his suit case under the seat, and located a big box in front.

"Why Jim!" Mandy gasped, as he masterfully caught the lines from her limp hand, giving that hand a warm pressure as he did so. He chirruped to the horse until that willing creature took a pace beyond anything within his recent experience.

Not until the vacant country road was reached did Jim permit the slackening of the horse's pace. "Now Mandy," said Jim, winding the lines over the dashboard, allowing the horse to drive himself, "I want to know why you stopped writing to me. I thought you'd forgotten me."
forgotten me."

"I didn't forget—" Mandy stammered, "but I thought—"

"You didn't have any reason to think. You know I'm no writer, I'm just dumb before a sheet of paper, but I'm not tongue-tied. Say, I've got a present for you, and I hope you'll like it for 'twas bought to your own order." Jim foraged for the great bundle. "Look here!" He unrolled before Mandy's astonished gaze a piece of shimmering white silk, scattered and bordered with the most delicate design in pink rosebuds. "And here's a pair of pumps."

"They're white!" cried Mandy, as she touched the dainty things tenderly.

"This box of stuff a salelady I know packed up for me. I told her I wanted the sort of things a real lady would want for her wedding outfit," Jim laughed happily. "Say, Mandy!"

"How did you ever know, Jim?"

Jim's face became grave as he drew from his pocket a bit of torn cardboard, piecing it together carefully. "Do you remember when that picture was taken?"

"Yes," she quavered, "but I don't know how you ever got hold of it." Then a revealing flash came to her.

Amazing Prices on STEEL Shingles

The demand for Edwards "Reo" Steel Shingles has become so big that we now sell them from factory to user for less—actually LESS—than common wood shingles. And we pay all freight! LOOK INTO THIS MONEY-SAVING PROPOSITION BEFORE ROOFING YOUR BUILDINGS. SEND POSTAL TODAY AND GET FACTORY PRICES.

No Trick to Put Them On

You don't have to nail these steel shingles, like wood shingles, ONE AT A TIME. Put on as high as 100 at once, for they come in big sheets ready to nail on sheathing or old roof. It's ten times easier than putting on wood shingles. No extra materials to buy, no painting to do, no tools to borrow. Your hired man can do the job with a hammer.

Absolutely Rustproof

Please don't judge Edwards Steel Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely prevents rust from ever getting a foothold, as 100,000 delighted owners of Edwards Roofs have found out. It's the famous Edwards Tightcoate Process applied to genuine Open Hearth Steel.

Protect Your Buildings from FIRE

Don't take chances of fire from defective chimneys, flying sparks and lightning. Roof your buildings with these Steel Shingles and make them safe. Remember nine out of every ten fires start with the roof. We specifically guarantee every Edwards Steel Shingle Roof against lightning. This Guaranty is backed by a $10,000 Cash Bond.

Cheaper Than Prepared-Paper Roofing

Edwards Steel Shingles cost less, far LESS, than prepared-paper or composition roofing, IF YOU FIGURE THE COST PER YEAR. And that's the right way to figure

THOMAS MFG. CO., 5881 Wayne Street, DAYTON, OHIO

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THREE thousand Cadets of Equity! Raymond Wolfe, Kingwood, W. Va., makes the 3,000; and since he became a Cadet twenty-three others have joined. It is wonderful what an interest the UP-TO-DATE young people take in these letters. Since the previous issue was made up eighty-two letters have been received. I realize that many of these must be disappointed, and I regret that more than anything else connected with this Department, for the letters crowded out are just as interesting as the ones that are published. But none of the letters go to the waste basket; the writers are all enrolled as Cadets of Equity. We must caution writers, though, to be careful in writing names. We are surely glad to have the letters. We are proud of the writers, and we are trying to make UP-TO-DATE FARMING useful and interesting to all—a benefit to the whole world. Please help us to get more people to read it.

DEAR CADETS: Here comes a girl from the good old state of Kentucky. I live on a farm of 800 acres, and like farm life very much. My father takes UP-TO-DATE and thinks it a fine paper. I go to school at Rocky Hill Station, which is 3 miles from where I live. We have a piano, but I cannot play very much. I would like to exchange letters, cards, or photos with the Cadets, and will answer all I get.—Katie Morris, Smith's Grove, Ky.

DEAR CADETS: I am going to take a chance even if this literary masterpiece only serves to fill a line in the "crowded out" department of our page. I became addicted to the Cadet page only a short time ago, and consequently have missed a great deal, but I hope to make good from now on. I am not a farmer, but as I cleck in a small country store which is a great resort for farmers during the winter months I get to hear all kinds of agricultural discussions. I am half past 23, and am fitting myself for an analytical chemist, with a decided liking for agricultural chemistry. I am also interested in every other subject under the sun, including the young ladies. If you doubt this statement ask Esther. I hope the Cadets will write to me for I need the practice.—Richard S. Poindexter, Switzer, Ky.

DEAR CADETS: I would like to join you. I suppose you would call me a farmer's daughter as we live on a farm, but my father is a showman. I have been going with him every year until this year. I am going into business for myself this spring. My grandmother takes UP-TO-DATE FARMING, and I enjoy reading all the paper, but the Cadet page most. I live 20 miles from the capital of our state where UP-TO-DATE is published. I go to the city often, sometimes every week. My father ran two five-cent shows in the city two or three years ago. I am 20 years old, and would like to hear from all the boys and girls; will answer all cards and letters I receive.—Elsie Lietzman, Clayton, Ind.

DEAR CADETS: I am 15 years old, and live on a farm of 80 acres, 6 1-2 miles from Kalkaskia. My father takes UP-TO-DATE and thinks it is a fine paper for the farmers, and I like it also for the Cadet page. We have taken it about 2 years and expect to continue it. I have received letters from boys and girls that live on farms all over the United States. A great deal of lumbering is done here, and there are lumbering camps all around us. But the timber is going very fast. Torch Lake, a beautiful body of water, an arm of Lake Michigan, is not far away. There are many fish in it, and it is a great summer resort, and people come to it for miles. I would appreciate cards and letters from other Cadet boys and girls, and I will answer all.—Minerva R. Soper, Kalaska, Mich.

DEAR CADETS: I am 18 years of age, and enjoy reading UP-TO-DATE FARMING very much. I also enjoy farm life, and can do any kind of work on the farm. Autos are very plentiful in this locality, I suppose because William Penn gave us such good land. I am surrounded by Harrisburg, the capital, and Labenon, famous for having made the largest chain in the world, and Hershey's chocolate factory. I would like to exchange post cards with the young folks, views preferred.—John J. Shank, Elizabethtown, Pa.

DEAR CADETS: My brother has taken UP-TO-DATE FARMING for a long time and thinks it fine. We live on a farm of 360 acres. Our nearest town is about 14 miles away. I am 15, and would like to exchange cards or letters with Cadet boys and girls near my age—will answer all I receive.—Ruth Henry, Shirley, Mo.

DEAR CADETS: Kindly allow a farmer of Washington Parish to become a Cadet of Equity. I have been reading UP-TO-DATE FARMING for some time, and think it an exceedingly interesting paper, especially the Cadet department. I live on a farm of 60 acres located about 3 miles from the magic city of Bogalusa, La., in which is located the largest saw mill in the United States. It cuts six hundred and sixty thousand feet of lumber per day. Our principal crops are corn, cotton, cane, potatoes and truck. I work in the fields during the summer months, but in the winter season I usually trap. There are lots of fur bearing animals in this country, but I have had hard luck this season; all I have caught so far is a black snake and a chicken hawk. All correspondence gladly received and answered.—Murphy Stewart, Lee's Creek, La.

DEAR CADETS: I am a farmer boy 10 years old. My home is on a 480-acre farm. Our main crops are wheat, corn, oats, potatoes and alfalfa. My father's name is August Nelson, and he has taken UP-TO-DATE FARMING as long as I can remember. I like to read the Cadet letters, and I think this is the best farm paper there is. Every farmer ought to have it. I have taken five subscriptions.—Roy Nelson, Verona, Neb.

DEAR CADETS: I live on a large farm in the Piedmont section of Virginia, in Appommattox county, where General Lee surrendered to General Grant. We go there during the summer; wish you Cadets could be with me. We raise tobacco, corn, cattle and large fruit crops. It is warm here now (January 25). Trees are budding and flowers blooming. Virginia is a grand old state. I would like to exchange cards and letters with any of the Cadets. Will answer all, and will also send them pictures of the famous Virginia battle fields.—William A. Owen, Appomattox, Va.

DEAR CADETS: I am a girl of 16. My father has taken UP-TO-DATE FARMING only a short time, but we like it very much. I have neither brother, sister nor mother. I was born in the city of Chicago, but 8 years ago we came to the state of New York, and have lived in the country ever since. I am a lover of music, birds and animals. Having read the Cadet page every issue, I would be pleased to correspond with the Cadet girls and boys.—Alice Cronk, Elbridge, N. Y.

DEAR CADETS: My father takes UP-TO-DATE FARMING and we like it fine. We are going to organize a local union here in the near future. Our principal crops are wheat, oats, barley and potatoes. Wheat here went as high as 65 bushels to the acre. I am 20 years old, and would like to hear from all the Cadet girls and boys. Will answer all I receive.—Wm. Wiberg, Marysville, Idaho.

DEAR CADETS: Please make room for a Blue Grass girl. My sister takes UP-TO-DATE FARMING and we think it is an interesting farm paper, one that no farmer ought to do without, it contains so many interesting facts. Kentucky is a beautiful states, and is noted for its fine bluegrass and fine horses. We raise all kinds of grain, but our chief crop is tobacco. The Mammoth Cave in Edmondson county is the largest cave in the world. The end of it has never yet been found, and it attracts many tourists. The Natural Bridge in this state is also a place of interest. I am 18 years old and would like to hear from all the Cadet boys and girls.—Artica Hickerson, Wallingford, Ky.

DEAR CADETS: I am 16 years of age, and live on a farm of 640 acres in Stutsman county, N. D. We raise chiefly wheat, oats and barley. We do most of this work with two six-horse teams, though we have 22 head of horses in all. We moved here five years ago from Lax, Wis., and we like the farm much better. But we sure would get lonesome, but UP-TO-DATE comes in with a nice bright page of Cadet letters. I will be glad to answer all letters or postals received.—H. L. Frederick, Montpelier, N. D.

DEAR CADETS: Will you make room for another Wisconsin girl? I am 15 years old, am a reader of UP-TO-DATE FARMING, and like it very much. My mother died when I was 11 years old, and since then I have been housekeeping for my father. He has been a carpenter for over 39 years. We live in the city, but we have a good place to live. In the spring I am going to start poultry raising, and flowers and a little garden. I would like to exchange cards and letters with the Cadet girls and boys, and will answer all I receive.—Frances Grubba, 326 Washington Ave., Stevens Point, Wis.

DEAR CADETS: I am 21 years of age, have never been intoxicated, and do not use tobacco in any way. I have been janitor here at Kingwood, W. Va., for about 3 years. The building is of brick and contains ten rooms, an office and two halls. I sweep and dust every day. My father owns a small farm about 8 miles from here. I would sooner live on a farm than

WATCH AND RING FREE

PULLED!

With a Triple Power

Hercules

Biggest stumps are pulled out in 5 minutes, with the Hercules. It pulls *an acre or more of stumps a day.* Why don't *you* clear those stumpy acres of yours! It means much to you. Put that stumpy field under the plow and it will be worth *double*—and will *pay* you big money in crops.

$1281 Profit Easy

on 40 acres the first year after stumps are pulled. Remember, you plant on virgin soil—the richest land on your place. Get a Hercules now while I'm making such a money saving special price proposition. The Hercules is sold on 30 days' free trial—all broken castings replaced free any time within 3 years. Double safety ratchets insure safety of men and team. 60% lighter in weight and 400% stronger than any cast iron or "semi-steel" puller made.

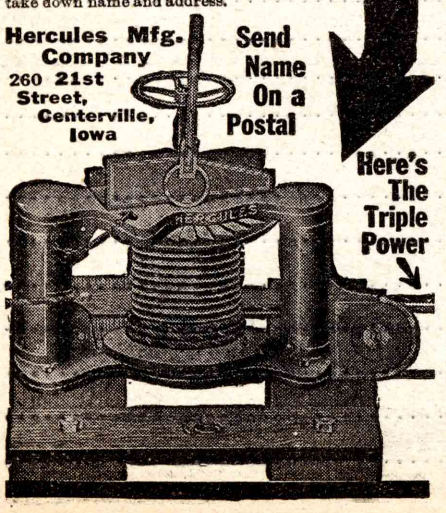
Valuable Book Free

Read astounding profit-facts and figures. See many letters and photographs. Read about best crops to plant in virgin land where stumps stood. Then note special low introductory price to first buyers in each locality. Mail postal right now or take down name and address.

Hercules Mfg. Company 260 21st Street, Centerville, Iowa

Send Name On a Postal

Here's The Triple Power



in town, for I like to be out in the open where there is plenty of fresh air and sunshine. I certainly enjoy reading UP-TO-DATE FARMING, and think all farmers should take it. As soon as I receive the paper I turn to the Cadet page. I enjoy reading the letters from all parts of the United States. I would like to exchange postal views or letters with any of the girls or boys, and will answer all I receive; so don't forget to send me a card.—Raymond Wolfe, Kingwood, W. Va.

DEAR CADETS: We belong to a Moravian church at Green Bay, Wis., though we live ten miles from town. We go to Sunday school every Sunday. Our main crops are oats, rye, barley, potatoes, corn and vegetables. We have two orchards, and a large silo which is filled with green corn every year. We live near a lake where we go boat riding once in awhile. There is fine sleighing here now (February 5). It has been very cold for the last week. I would be pleased to hear from all the Cadets of my age, which is 16 years.—Alma Jorgensen, Green Bay, Wis.

DEAR CADETS: I would like to join the girls and boys and become a Cadet of Equity. My father has just begun to take UP-TO-DATE FARMING, and he likes it very well. They have organized a local at our town which I hope will be a success. I am 15 years old and go to school every day I can. We live on a farm about a mile from town. I lived on a farm when I was small, then we lived in the city about 8 years. Then we came to Itasca county and lived on a farm. We have been living here about a year. I would like the girls and boys to write to me, and I will answer all I receive.—Ruth Sargent, Liepold, Minn.

DEAR CADETS: Before I say anything about myself I wish to say a word about UP-TO-DATE FARMING. I will not say that it is the best paper issued, because I do not read all of them. But it is my favorite, and we take about 15 newspapers and magazines. We have taken it over a year, and I guess I ought to know by this time I live on a small farm about five minutes' walk from Crestline. I will be 17 years old March 1. I would like to have photos and letters from the boys and girls, but would much rather meet them and get acquainted.—Wm. Miller Markel, Crestline, O.

This variety of potatoes combines all of these qualities in high degree. We positively assert, and have abundant and undoubted proof, that the **Six-Weeks Market Potato** does make good size, table tubers in **six weeks** from planting. The Six-Weeks can be depended upon to give these results if planted when the growing season has arrived and the weather is favorable.

They cook fine and dry from the time they are large enough until late the following spring. Size medium, skin light flesh color. They are perfect beauties. **Heavy and sure yielders.**

We first introduced and named this potato. From long experience we can say that owing to their quick growth, escaping drought, bugs, blight, etc., and extra yielding qualities, they are more profitable than late varieties which are oftentimes subject to unfavorable season conditions. The Six-Weeks is one of the best winter keepers, too, if planted late.

They grow so rapidly that potato bugs have little chance at them. Six-Weeks potatoes yielded on the farm of the originator in Ohio, 420 bushels an acre. Next year 380 bushels. Two years later over 600 bushels.

Planted Six-Weeks May 3. They grew fine. We had new potatoes cooked June 20. They are the earliest we ever saw.—Daniel Donovan, Carroll Co. Tenn.

Of 17 kinds potatoes planted, early Six-Weeks Market was superior to all in quality, size and earliness. I think they are the best potatoes on earth.—C. Carroll, Pipestone Co., Minn.

It is the best potato I ever saw, yields well, good size, cooks up like balls of flour, and is delicious.—Thos. Sinnock, Adams Co., Ill.

The earliest and the best extra potato. Thousands of testimonials received. You will make no mistake if you plant Six-Weeks Market Potatos this spring. If you think you can't afford to plant many, get enough to raise your seed for next spring.

Price: Our stock is limited and price is made subject to being unsold. Money will be promptly refunded if supply is exhausted. **By mail, postpaid:** 1 lb., 30c; 4 lbs., 75c. **By freight or express:** ½ bu., 75c; 1 bu., $1.25; 5 bu., $5.50; larger lots at $1 bu. Bags free. Shipped when weather is favorable.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

Read This at Once

"More co-operation by farmers and better distribution of farm products is the great present need."

—o—

Above is copied from Bulletin No. 61-b by the Washington State Agricultural Experiment Station. From the bulletin we also learn that the following topics are on the programs of the agricultural short courses conducted by the State college this year: "Co-Operation of Growers in Marketing," "Commercializing the Waste," "The Relations of the Producer and the Railroads in Marketing Farm Crops" and "The Producer and the Consumer in Co-Operation."

—o—

We make these observations for the purpose of showing that a revolution has been worked in this agricultural college and what is true of it is true of others.

—o—

Only a year or two ago the subject of marketing crops was tabooed by every agricultural college, experiment station and farmers' institute in the land. But now it is being given attention nearly equal to the other side of agriculture, the producing side.

—o—

A few issues past we printed some resolutions by the Kansas Agricultural College and Experiment Station adopted at a meeting on January 1, 1913, to aid the farmers of Kansas to organize and market. The Mississippi college has included marketing in its activities, and some other colleges have already taken similar steps or have them under consideration. Also the United States Congress has a bill, which already has been adopted by the Senate, to establish a division of markets in the Department of Agriculture.

So from nearly every part of the country comes the declaration that farmers must co-operate to market better and powerful institutions are volunteering to help them.

—o—

These people have at last concluded that farmers must be taught not only how to produce crops but how to market them—given a **balanced** education—as this paper has alone been giving them for years. Crop improvement they see, is not everything. In fact, the big crops of 1912, which are selling for less total money than the smaller crops of former years, have brought the exclusive greater-crop teacher in such disrepute that he had to change his teachings to "save his face."

—o—

So farming of the future will not be merely a fierce fight to produce more, but it will be a business of producing such a quantity as the demand requires and selling it at prices that will guarantee dividends on the investments of the farmer and equitable rewards for his labor. Farmers' permanent prosperity cannot be secure until they are able to market right, and they cannot market right until they are organized right and co-operate right; so, when we consider that the prosperity of all other classes depends on the prosperity of the farmers, thinking people will go to the foundation of the whole proposition.

—o—

And the foundation is RIGHT MARKETING.

—o—

So the all-important thing, and the one thing that every individual producer and every association that feels the need of improvement in marketing, is how to arrive at right marketing. And in this connection we may fairly ask, what plans have the agricultural colleges and Congress and other recent converts to offer?

—o—

We said the Washington college discussed the problems in its institutes. The Kansas college adopted resolutions to help farmers to organize and then to help them to market, but the officers said: "We must call conferences of farmers and others to consider the matter, and we will investigate what has been done in Europe. When we can arrive at the right way, then we will act, but you farmers must have patience, as it may take two or three years to find the right plan." The Mississippi college invites producers to report what they have to sell and if any person has registered a want with it, the two will be put in communication with each other. The bill in Congress goes farther, or pretends to, as a reading will show. We print the essential part here:

THE BILL

Sec. 2. That the chief of the Bureau of Statistics shall have power and authority to make, through the Division of Markets, under the Direction of the Secretary of Agriculture, investigation as to the systems of marketing farm products, co-operative and otherwise, in practice in various sections of the United States and in foreign countries, and shall collect data in reference thereto. The information and data thus collected shall be distributed to farmers, farmers' organizations, and societies of consumers throughout the various agricultural sections of the country, and made available for the use of any individuals or organization, either by the circulation of printed bulletins and telegrams or by information given personally by special agents of said bureau. It shall also be the duty of the chief of the Bureau of Statistics to make, through the said Division of Markets, and under the direction of the Secretary of Agriculture, investigation of demand for farm products in various trade centers and the current movement of such products, giving specific data as to the supply, normal demand, and the price thereof, with the view of furnishing information as to the best available markets, which information shall be distributed under the direction of the Secretary of Agriculture.

Sec. 3. That it shall be the duty of the chief of the Bureau of Statistics to collect, through the said Division of Markets, by any expeditious methods, as by telegraph, telephone, mail, or otherwise, compile, and report to farmers, farmers' organizations, and societies of consumers daily bulletins or telegraphic reports of such information and statistics as will enable them to adopt plans of marketing that may facilitate the handling of farm products at a minimum cost: *Provided*, That when such reports or statistics are requested to be furnished by telegraph or telephone, or methods other than the United States mail, the person or association making such request must advance the fee for the cost of transmission, which shall be deposited to the appropriation for the maintenance of said Division of Markets. It shall be the duty of the Secretary of Agriculture to make an annual report to Congress regarding the work of the said Division of Markets, with any recommendations that may enable Congress to enact any additional necessary legislation.

We claim that the time is past for agitation and investigation and the time has come for action. Instead of studying the marketing problems in Europe, where conditions are very different, it will be enough to study them in this country and build up an organization and adopt a system that will meet the requirements of our case.

—o—

Farmers are not in a humor to wait several years more. They want action now and results. They can expect very little from the agricultural colleges unless they come out at once with practical and comprehensive plans. Each one carrying on a co-operative effort in its own state, independent of but in competition with all the other states, will accomplish nothing worth while. Under such a guerilla system markets will be glutted as now, speculators will still get hold of the supplies and exploitations will be as great as at present and in the past.

—o—

And we cannot see that the Division of Markets in the Department of Agriculture, if the proposed law is enacted, will meet the needs. The "information and data" about "systems of marketing farm crops," "distributed to farmers and farmers' organizations and societies of consumers" will avail nothing. Such a work was compiled by Frank Andrews of the Department of Agriculture and printed in the Year Book of 1909 and, in the form of a bulletin, it was given a very wide distribution and is still being distributed. Instead of this information remedying the troubles they have actually become worse.

—o—

There might some good come from the Division of Markets, if it is established, through its investigation of demand and supply, if such knowledge can be obtained and used advantageously by the producers. But such information will be distributed to all alike and it will still remain with the farmers and farmers' organizations to adopt plans that "may facilitate the handling of farm produce," etc. In other words, the Divsion of Markets proposes to send out "daily bulletins or telegraphic reports of the demand for farm products in various trade centers and the current movement of such products," but without any power to make the price on the day of the arrival of any shipment, or to know what it will be any future day.

—o—

It this bill becomes a law (it was adopted by the Senate on August 21, 1912), it will leave the marketing of farm crops exactly where they are now, with another expensive institution to maintain out of the taxes gathered from the people. That is, each farmer, and farmers' association and the tens of thousands of local buyers and shippers to the markets will continue to compete with each other as they have in the past. We hate to say it, but we doubt if this bill was introduced in Congress with any sincere desire to solve farmers' marketing problems in their interests, but more as a counter-irritant, or to counteract the progress of at least one farmers' movemnt to solve this great problem for all time. And this is not an unreasonable view to take when we consider the law on industrial alcohol, the postal savings bank and the very recent parcel post law.

—o—

And this suspicion is confirmed by the fact that the appropriation of $50,-

The Farmers Society of Equity

Is a farmers' organization, incorporated, headquarters, Indianapolis, Ind. Its first and greatest object is *"To obtain Profitable Prices for all the Products of the Farm, Orchard and Garden.*

National Officers and Directors

000 for one year must make the law, if enacted, impotent. We have in mind that in one year the eastern shore of Virginia Produce Exchange spends $20,000 for telegrams alone, and this is not its chief expense. And there are other associations that spend as much and some spend more for this one item. In view of this, how far will $50,000 go toward the expense of a national marketing system? The chief would receive $4,000 of it, as the bill provides, and the assistant chief $2,500. And there are to be "special agents, clerks and other employes as may be necessary." And the investigations are to be carried on in this and foreign countries. True, the bill provides that reports by telegraph or telephone must be borne by the receiver. But any scheme to bring definiteness in the matter of marketing must reach all the people and reach them every day when they have something to market. How long, then, would $50,000 pay for the printing of reports and the clerical work to mail them, even granting that they will be sent postage free? And how many farmers or farmers' associations would prefer to pay the government for wire reports than their own?

—o—

Marketing crops for farmers is no more a function of the government than is the marketing of machinery, dry goods, coal, timber, etc. The Department of Agriculture can't do it and the farmers should not want it to do it. Farmers should resent this interference, as any other class of producers would.

—o—

But farmers can build their own marketing machine, as other people did. Then they will own it and can run it in their own interests without interference, as long as it is run in fairness and equity to the consumer.

—o—

We will say frankly, that the purpose of this article is to make it clear that, so far as we have been able to find, there is no practical plan for marketing farm crops before the people up to this time, except the Equity plan advocated by this paper and being established now all over the country. In order to make comparisons and to afford all our readers the opportunity to judge of the Equity plan we have begun its publication in this number. It is too lengthy to print complete in one issues and will run in four numbers. See on page 7, "The Problem of Marketing."

—o—

The Equity plan, and for that matter all plans, should be studied by every farmer, because the matter of marketing is now the most important thing before all the people of the country.

—o—

As this paper will reach many farmers who are not subscribers they should send their subscriptions now to insure getting the other four chapters.

—o—

Also as this paper will reach many officers and members of local and district farmers' association, we assure such that the Equity System of marketing does not contemplate abandonment of, nor interference with the plans and purposes or names of such associations. The movement has two chief activities—organizing and federating, but with one chief aim—unity in marketing. This will be understood by a reading of the following resolutions adopted at Indianapolis, Ind., October 3, 1912, at a conference of representatives of farmers' associations:

THE RESOLUTION

Whereas, there being indisputable evidence of the need of a federation of the many societies and associations of producers of products of the farm, garden and orchard, in order that a more complete and efficient system of marketing may be quickly established; therefore, be it

Resolved, that it is the sense of this conference that each and every local and general society, association and organization of farmers be cordially invited and urged to co-operate in a movement to federate all agricultural organizations for the purpose of the establishment of a practical, efficient, national system of marketing. And be it further

Resolved, that as the Farmers Society of Equity has superior facilities for promoting such a federation, with a marketing system already in operation, and an organization that covers a large portion of the United States, and a plan for a complete, national system, it be empowered to conduct a campaign to bring these important and vital matters to the attention of other organizations and associations. And be it further

Resolved, that in order to strengthen the movement, and build up a working foundation for such federation, other associations be invited to unite with this movement at once as body units, by the payment of a flat rate of fifty cents per member, or a minimum charge of $10.00 for any organized body, they being granted in return the services of the present system of the Farmers Society of Equity. And be it further

Resolved, that as soon as possible to secure a satisfactory representation of delegates from other societies and organizations, a convention be held to organize the federation, elect officers, provide for a charter and articles of incorporation, and firmly establish a foundation for one permanent national system of marketing. To this end the officers and members of all agricultural organizations and every individual farmer who feels the need of reform in marketing are hereby invited to investigate this movement, and lend his hearty support to the accomplishment of the object of such a federation.

Resolved further, that we recommend that the new organizations be called the American Farmers Federation.

SUBSCRIPTION TERMS—One year 50 cents; three years $1.00. Three one-year subscriptions can be sent for the $1.00 if preferred.

Write whether
New or renewal.....

—o—

Please understand, at every town, city or shipping point, where produce is marketed, there must be a unit of the great American Farmers Federation that is building. It does not matter what its name, or what its purposes, except one purpose must be **unity in marketing,** which follows by virtue of it being a unit in the federation. These local associations should be as numerous as railroad stations. Probably half of the places have organizations now. These are the ones to be federated. Somebody send the federation blank. Don't depend on somebody else to do. YOU do it, and then you know it will be done.

—o—

The other places must have a new association organized. Here again, don't depend on somebody else sending the blank. You do it, and you will know it is done. It may be of decided benefit to the person whose blank reaches us first.

—o—

Our purpose in going about this matter in this way is to get material to work with in each locality. Organization and federation cannot be brought about in any other way, unless an enormous expense would be incurred to send personal representatives all over the country. This would involve an enormous expense that is unnecessary even though it were practical, which it hardly is, because the organizing and federating work is going on at about 500 places at the same time all the time.

—o—

If the farmers themselves will not help a little in this movement how can you expect others to do it? But others can't do it for you. If you wait on the agricultural colleges, the railroads, the boards of trade or even the government itself to give you a marketing system, if they would ever do it, you may depend upon it, it would be more in the interest of the other people than yours, as government crop reporting is.

—o—

Every day farmers write us and say, "Something must be done here to improve our marketing system." Well, we can tell you what must be done and how to do it, but no power on earth can change the system as far as YOU are concerned but YOURSELF.

—o—

So don't hesitate over the matter. The whole country is organized against the farmers. You may not have thought of it, but it is a fact. And those organized interests are going to try to give farmers a plan, through Congress or in some other way that will be impotent to make farmers free and independent, just as soon as they see there is danger of farmers building their own machine. Don't let them pull the wool over your eyes.

—o—

Farmers must do their own business and not look to others to do it for them. To do it they must organize. To save the organizations they have now, they must federate. And all of them must adopt a simple, practical, successful BUSINESS SYSTEM for marketing. These are things that we are ready to make clear to all the people as fast as we have the opportunity to do so.

—o—

Quit complaining and learn how to set things right.

—o—

You've got this thing to do, so why not do it now and enjoy the benefits of its this year yet?

—o—

At any rate, investigate.

Do you find it hard to mow the lawn when for one reason or another the grass has gotten long? Of course you do with the old-style mowers. But with a Clipper mower it is a delight. Send for full particulars to the Clipper Lawn Mower Co., Box 5, Dixon, Ill.

It Couldn't Stand Her

"I thought you was opposed to woman suffrage. Why did you insist that your wife must join the suffrage club?"

"I wanted to break up the club, and I knew that would do it."

New Invention **SLEF-HEATING IRON**

The "Standard" Makes and Contains Its Own Heat

Works while it is heating, heats while it is working. Saves miles of walking.

SAVES ITS COST EVERY MONTH
Economical, perfectly safe, convenient. The **"Standard"** is stove, fuel, heat—all in one. **Fire in Inside.** Carry it about, go where you please. Don't stay in hot kitchen; iron any place, any room. Go right along, one thing after another. All kinds of clothes.

IRONED BETTER IN HALF THE TIME
No waiting, no stopping to change irons. Right heat. Easily regulated. No time wasted. Iron on table all the time, one hand on the iron, the other to turn and fold the clothes. The **"Standard"** is neat, durable and compact; all parts within radius of iron and handle. No tanks nor fittings standing out at sides or ends to hinder or be in the way. No wires or hose attached to bother. **Right size, right shape, right weight.** Cheapest fuel, one to two cents does ordinary family ironing.

WHAT USERS SAY
Alex Stalker of N. Y. writes: "The Self Heating Iron received sometime ago and will say right here **it is the most wonderful time and money-saving device that was ever made.** My wife has just finished a large ironing in two hours that usually took her half a day with the old stove heating irons, and the house is cool. **It is certainly just the only iron made.** We want the agency." W. P. Farnum: "After receiving your iron and giving it a thorough trial it **will be a perfect success. My wife is enthusiastic** over the work it does and the economy in its use." Mrs. J. E. King, Ill.: "Received iron yesterday in good shape. **Well pleased with it. I want the agency.**" I. N. Newby, Ill.; **"Find it to be all you claim for it."** Mrs. Josephine Route, N. Y., "Received the iron O. K. and did my ironing with **it yesterday. I like it very much."** A. E. Covert, N. Y.; "Have lighted it several times already and find **I can do ironing so much quicker and cleaner than in the old way.** Think it is the **best thing I have ever had in my house."** Miss Roxie Sheets, of N. C.; "The two irons received and am delighted. **Have turned off our regular ironer and will do the ironing ourselves now.** Sold the extra iron to the first lady I showed it to." Mrs. Watson C. McNall, N. Y.; **"I am more than pleased with it** and its work. It **is not a bit clumsy. It is a delight to use it."** Mrs. Cora Wright, Ill.; "I received the iron Saturday and like **it fine."** Mrs. C. M. Winstead, Ky.; "I received my iron about three weeks ago. **Like it better than anything I ever saw in the way of irons."**

The "Standard"

So they go—hundreds and thousands of delighted customers—the work of ironing cut in half—the expense of fuel almost eliminated—a Godsend to every home. The poor can afford it—the rich can buy nothing better. Every iron tested before shipping—fully guaranteed—ready for use when received. Price low—$4.50. Sent anywhere.

Agents Make Money. Men or women, Quick, easy, sure. **All your business.** Experience not necessary. Sells on merit—sells itself. They buy on sight. Every home a prospect. **Every woman needs it.** Price low—all can afford it. **HOW THEY DO SELL!** Even 2 or 3 a day gives $27 to $40 a week profit; 6 sales a day is fair for an agent; some will sell a dozen in one day. Show 10 families—sell 8. Not sold in stores. Send no money. Write postal today for description, agents selling plan. How to get **FREE SAMPLE.**

Cutting, Portland, Ore., or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; Fred N. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; J. A. Harmon, Shawnee, Okla.; C. Hayes Taylor, Indianapolis, Ind.

The Membership

consists of farmers and is limited to farmers and co-workers with farmers. The wives and members and their minor sons and daughters may become *special members.* The terms of membership are fully set forth in the Constitution and By-Laws.

The Local Union

This is the home workshop of the Society. In it must be shaped the plans and work that will revolutionize American agriculture and usher in the time when the tiller of the soil shall no longer be a mere "hewer of wood and drawer of water" for others, but when he shall be a more important and more independent member of society. Through the local union, assitsed by headquarters and representatives on all the great markets of the country, all the *business* of the members—selling and buying—can be done.

How to Organize a Local Union

Whenever a reader of UP-TO-DATE FARMING reaches that condition of mind that he believes the farmers of his community should do more of their own business of selling and buying, instead of paying an enormous price to have it done by middlemen, he should send for instructions for organizing a local union. Any person who stands well in his community can organize.

A local union is wanted at every town, city and shipping point where not already established. Send for instructions, rate of compensation, blanks, etc., to facilitate sending we append a coupon here. If no local union at your town send the coupon.

. . . . . .

FARMERS SOCIETY OF EQUITY
Indianapolis, Ind.
Gentlemen: Please send instructions, rate of compensation, blanks, etc., for organizing a local union at

The Traveler

Under this head appears accounts of what our "Traveler" sees, hears and otherwise discovers. He can not, unfortunately, visit every section and locality, and those whom he can not see he most earnestly desires to hear from occasionally. This applies to every reader of this paper who is interested in the plans of the Farmers Society of Equity. Write to "The Traveler." Write today and address your correspondence to

"THE TRAVELER'S DESK"
CARE THE FARMERS SOCIETY OF EQUITY
INDIANAPOLIS, IND.

I call your close attention to a letter received at headquarters from Brother J. M. Stretcher, of Hillsboro, Ore. There is wisdom in it. Upon such a foundation the farmer can build a machine that could rock the world, if necessary.

The attitude taken by the members of this local is the correct one. They are earnest in their endeavors, reasonable in their expectations, conservative in their methods, and have those two qualities so essential to success—persistency and patience.

The moral is plain: A perfect working organization of American farmers on national scope cannot be made in a day. It will require time for improvements and adjustments. But it will eventually fulfill every expectation and demand of reasonable men. In its making, however, we have to work and wait, and unless we do work, and construct this great co-operative protective and business organization, we shall suffer losses for which there is no need.

We are on a deal with three firms in San Francisco for our potatoes. We have about 3,000 sacks to sell. The best we can do with Portland buyers is 35 to 40 cents per hundred. We get $1 and $1.10 in 'Frisco and it costs 26 cents per hundred to ship. So you see what organization has done in our neighborhood. National Organizer Cutting said this was the most difficult neighborhood to organize he had found in a long time. I would like to tell him he has started something that he couldn't stop. It may have been hard to start, but would be impossible to stop. We have about doubled our membership. We do not coax anyone. We state the proposition plainly, and they are the ones to choose. We want no dissatisfied members. When they are once in, they come with the full understanding they are there for business—to work, not to be waited on.

Some locals hold meetings every two weeks; but we have so much business we meet every Thursday evening in a band hall, and find so much to do we cannot get away earlier than midnight.

Our secretary was out five nights last week getting in communication with other members regarding making our shipments. It is hard to get things moving at first, and it takes time, and we must have patience.—J. M. Stretcher, Hillsboro, Ore.

I report results of a meeting held at St. Anthony. Fifty farmers were in attendance. The Farmers Society of Equity and its plan was thoroughly discussed. Then a committee was elected to advertise and work up another meeting. Seven of the leading farmers of the community, each raising from 10,000 to 15,000 bushels of grain were placed on that committee. Each will get as many as possible farmers to sign the application. Then, if any fail to attend the meeting, the committee will advance money to pay their fees, and will collect from the absent members later.

This new local will have the following produce ready to market at once:

Eleven carloads No. 1 spring wheat; six carloads No. 1 oats; seven carloads first-class feed; six carloads second-class feed; ten carloads white potatoes; two carloads russet potatoes.

Guaranteed Rupture Holder On 60 Days Trial

Won't Cost You A Cent If The Two Months' Test Doesn't Prove All Our Claims

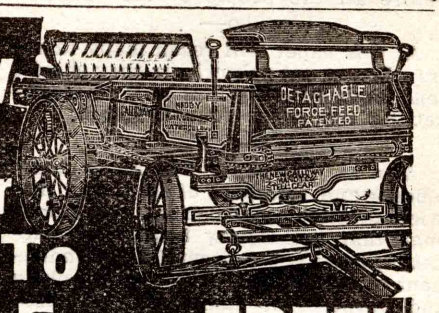
You can make a thorough 60-day test of this guaranteed rupture holder without having to risk a single cent. We'll make one especially for your case and let you see for yourself how it takes all the misery out of being ruptured.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.
Box 773—Cluthe Co., 125 E. 23rd St., New York City

Here's My New 1913 Model Galloway Spreader That I Want To Ship To Your Farm FREE!



No payment down—no bank deposit—no lease, notes or mortgages—no red tape or obligations of any kind whatever. I'll ship you this new, 1913 Model Galloway **right to your farm for 30 or even 90 days trial absolutely free.** I'm going to make this spreader prove its worth to you without a word of argument on my part whatever. Here's the way I'll do it: I'll put the spreader on your farm for a 30 to 90 days trial **absolutely free.** I'll put it right straight up to you. Figure out a series of tests that would make scrap iron and kindling out of any other spreader made—**then try them on the Galloway.** Load it up as full as she'll hold with the toughest, tramped down or frozen slough hay manure. Let your team trot and slam it in gear! Do you think that there is one other manufacturer in the world that would dare to hint at such a test as that? **You know there isn't!** But if you can think of a severer test, go ahead. **I'll take all the risk and let you be the sole judge.** If you think you can possibly get along without the Galloway after you have had the free trial, just send it back to me. I'll pay the freight both ways—you won't be out one cent. If you want to keep it, I'll guarantee to save you $25 to $50.

Get My Big 1913 Proposition NOW!

Four years ago I started working on the biggest, finest and most daring plan I've ever offered. Now I've got it perfected. I can't explain it here—there isn't room. But if you'll write me at once I'll tell you how you may get one of my 1913 Model Spreaders *partly or entirely without its costing you one cent.* I won't ask you to do any work—any soliciting or any canvassing. It's the fairest, cleanest, most amazingly generous, co-operative plan that you or anybody else ever heard of. Write me and I'll tell you all about it.

My Regular $1 Book —"A Streak of Gold" — FREE

One of the most valuable books any farmer ever held in his hands. Explains fully, in plain language, how to make manure the greatest money crop on the farm, how to spread it, care for and use it. I'll send it free, also my 1913 Spreader Catalog and full details of my 1913 proposition. Send a letter or postal.

Wm. Galloway, Pres. WM. GALLOWAY CO., 509 Galloway Sta., WATERLOO, IA.
Spreaders in stock at Chicago, Kansas City, Minneapolis, Council Bluffs, Winnipeg. 99

I am calling the locals of this (Fremont) county together on the first Saturday in March (March 1) to organize a county union. The meeting will be held in the rooms of the Commercial Club, in Rexburg, at 2 o'clock p. m. We will have in the several locals a total membership of four hundred, possibly six hundred by that time. We are working for one thousand members in Fremont county before spring work opens. The Equity System will spread until it fills the whole country, and farmers are in control of the stuff they produce."—O. S. Paul, County organizer, Rexburg, Idaho.

I received a shipment of four hundred pounds of clover seed from Brother C. W. Lusk (a member in Illinois). We gave Brother Lusk a better market than he could get at home and saved $20 for ourselves on that one little deal. The Equity Eystem is all right.—Geo. W. Heiskell, Lockwood, Mo.

I will give you a brief outline of the way we conduct our local. First, we have had a meeting every Saturday night for several months, and are very much alive. We have a committee on membership, one on investigation, one on markets, and one on buying; also one for arranging our local meeting program.

We figure on building a very large potato cellar on the switch at this place this year, in order to be able to ship at any time in winter.

Our program is usually one speech on Equity, followed by general discussion. A talk on some topic on farming methods, and music. We usually have good attendance, and prospects are for a large increase. —W. W. Hayes, Secy., Sterling, Idaho.

—::—

Doing Good Business

Covallis, Mont., Feb. 5, 1913.

The Society is in good shape in this county. We have just finished the delivery of a car of flour. All are pleased. We saved $365 on the car, and caused the dealers to cut the price to all customers. We took orders for a car of coal for our local, and will save $2.00 or thereabouts a ton. We buy sugar in ton lots and have saved from forty cents to $1.10 a sack. We kept the price of sacks down at least 1½ cents each, buying in ton lots of a local dealer.—A. B. Stryker, County Organizer.

—::—

Showing Them in Missouri

Lockwood, Mo., Jan. 3, 1913.

I now have twenty-three names on my application for a charter, with fair prospects for more. I am somewhat encouraged since election. Farmers are willing to talk business, since politics have settled. I believe we will have fifty charter members to start with. Fifty is our goal; fifty charter members our watchword; fifty we will have if life and health permits.—Geo. W. Heiskell, Local Organizer.

—::—

Big Things for Oregon

Portland, Ore., Feb. 5, 1913.

Referring to what I am doing in Oregon: I may say that we hope to have an agricultural clearing house incorporated, in connection will have warehouses, canneries, driers, starch factories, fruit-juice, pickle and kraut works, etc., in fact, everything that will use to the best advantage the surplus and waste of the farm. These different units will be added as requirements justify.

We had an enthusiastic meeting of over 100 delegates and members of the various locals recently organized, at Oregon City, Clackamas County, on December 31st., at which time the Clackamas County union was formed. Everyone present was convinced that farmers are on the right track at last. We will now devote our entire attention to the organization of a state union. Marion County gets its first local tonight. Columbia County will be started very soon, and Yarnhill County strengthened.

I will say further, that I am very grateful to the Equity brethren who have conferred upon me the office of National Organizer, and I assure them I shall do all in my power to further the interests of Equity.—H. F. Cutting, National Organizer.

—::—

Coming One by One

Idaho Falls, Ida., Feb. 5, 1913.

I was at Rexburg recently to attend the annual meeting of the local at that point, through invitation of County Organizer Paul. Both Rexburg and Hebert locals were in attendance. Brother Paul had made good provision for the meetings. I spoke for an hour or more with seemingly good effect. All present not already members joined and all alike pledged faithful work to build up the Society. There has been a lack of formal work, or order of business, but I think this condition will be improved henceforth.

If the weather is good, I will put in from four to six locals this week. —R. A. Southworth, District Organizer.

A very valuable dairy book can be gotten free by anyone who has cows who will write the De Laval Separator Company, New York City, and mention UP-TO-DATE FARMING. This is not a catalog of separators, but a book of information that every cow owner should have.

The White Combination Car

This Car Will Give You More Practical Use, More Comfort, More Pleasure, Last Longer and Cost Less to Run, Than Any Car Built

A Roomy Carriage and Large Motor Wagon in One

There is no car built that so perfectly meets your every requirement. It carries eight people easily and conveniently, with plenty of room besides for lunch baskets or hand baggage. Its seats, (which are deep and comfortable) can be easily removed by one person in a couple of minutes, and the wagonbox body utilized for baggage, merchandise, or anything that the ordinary road or spring wagon would be used for, up to a load of 1500 pounds.

Its Riding Comfort and Ease of Operation

Its excellent springs, light weight (considering its capacity) and its perfectly balanced body, make this car unsurpassed for comfortable riding qualities, and as easy to steer as a light roadster.

Enough Speed and Power to Meet Every Condition

There are very few, even of the fastest touring cars, that can pass the White Combination Car on the road. And even when loaded to full capacity this White will climb hills at a steady road pace, that the ordinary car will have difficulty in climbing at all.

The Reliable, Economical White Engine

If you have driven a White, then only can you understand, how simple, quiet, powerful and economical is the White engine. It was the first, and is still, the only practical long stroke, cast-in-one-piece engine in this country. Its fuel consumption is so low under all conditions, that regardless of price, it is the most economical engine made, and its performances in daily service in thousands of White cars is worth investigating, in fact, the rise in the price of gasoline is not felt by White owners. Its compact simplicity with no parts exposed to dirt or injury, removes all of the chief sources of care and trouble, and necessitates little or no attention being given to it.

Body Upholstery and All Fixtures Beautifully Finished

The finish, material and workmanship on this car, is in every detail true to the White standard,—the highest. The spring seats are roomy and comfortable, and are upholstered with the best leather, while the body finish is done with that attention to detail that has made the White cars famous for their excellence.

The Material and Workmanship of the Highest Grade

The chassis, including engine, transmission, axles, gears, bearings and wheels, is constructed with the same care and excellent material that has characterized White products for over fifty years—and has made White automobiles of every design second to none in the world.

Consider What This Car Means To You

Stop and think to what practical and pleasurable uses this car can be put, both in hauling and touring. You will find that it will more than take the place of a touring car, a spring wagon, a service wagon and two teams of horses combined. Just write us today or use the coupon below, and we will send you complete detaiis of the White Combination Car.

THE WHITE COMPANY

FREE COWBOY Watch Fob

Here is the most unique, popular novelty of the year—a nifty little leather holster and metal gun, an exact duplicate of a "45" Army Colts, with bright polished barrel and cylinder, black handle. Gun 2¼ in. long. Holster 2½ in. long, genuine leather, tan color.

Makes a neat appearing and serviceable watch fob or can be worn on belt as ornament. Worn by men, women, boys and girls. The one real western novelty. Sold in big cities at a high price. Send 10c to pay for 3-months trial subscription to our big farm and home magazine and receive the COWBOY WATCH FOB and GUN free. Address,

VALLEY FARMER, Dept. Fob-21, Topeka, Kan.

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

Memorial to United States Congress.

Following is a memorial before the Idaho General Assembly. The members of the Farmers Society of Equity are largely responsible for its introduction. If every wealth producer of the country understood the importance of securing what this asks for not one of them would stop until he had penned a letter to his representative to work for what this memorial demands.—R. A. Southworth, Idaho Falls, Idaho.

THE MEMORIAL

"This body representing the farming and other industrial classes of Idaho, desires to state to your body:

"For a period of about fifty years the United States Congress has granted to a favored few a special privilege, namely, when one man or a few men were fortunate enough to acquire 50,000 or more dollars, Congress would sell him, or them, United States bonds for a like sum drawing interest, through the United States treasurer. This same official would put in safe deposit this bond or bonds, send to the purchaser, the interest at regular periods, besides this, he or they would be furnished $45,000 or 90 per cent. of the bonds in bank notes, at one-fourth of one per cent., to cover cost of printing, thus nearly doubling the capital of this favored man, or set of men, under the special privilege conferred upon him by the national banking act of some fifty years ago.

"The producers pay the interest on these bonds, then again upon the bank notes authorized by Congress.

"This process helps to take from the average producer all but a meager living while the favored men because of this special privilege have grown fabulously rich.

"We are tired of giving up our wealth, produced by our sweat and toil, to capitalize the non-producer. Therefore, be it

"Resolved, First—All currency whether gold, silver or paper must be a full legal tender issued by an act of Congress and distributed through government banks as postage stamps are through the post office.

"Second—Loans to be made through government banks on productive farm real estate at a rate of two (2) per cent. per annum.

"Third—The adotion of a graduated income tax, the increase of the rates of the present corporation tax and the extension of inheritance taxes, graduated in proportion to the value of the estate and to nearness of kin—the proceeds of these taxes to be employed in the socialization of industry. Provided that no legatee shall be allowed out of any estate over $3,000,000 dollars.

"Farmers and wage earners, the producing classes, are not looking to Congress for any special privilege, but we are looking to you for Justice. If you can print bank notes for one fourth of one per cent., you can print legal tender notes for two (2) per cent.

"Do not disappoint us."

Up-to-Date Best of Eight.

I take seven farm papers and I find UP-TO-DATE is best of all. In the matters of marketing this paper leads all others. I have been getting better prices for all produce since I read it. I can also say that it is much better now than when I began to take it five years ago.—T. Palmer, Sarcoxie, Mo.

Disgusted With Things.

I have just read your January 15th issue and I am getting more and more disgusted with the way our government is run. That Lever bill caps the climax and I can not keep still any longer. It is just another scheme to rob the tax payers and give a few thousand more loafers easy jobs. If the farmers permit these three thousand loafers to be foisted on them to tell them how to raise more stuff, when he can't get respectable prices for what he has been raising, then they are bigger fools than I think. I believe the agricultural department is the greatest graft ever perpetuated on any people. Go after it and show it up and you'll have every farmer on your side. It's the long hours, hard work and poor pay that causes our boys to flock to the cities. We have been robbing the land to build up the cities. Let's quit it and compel the speculators to go to work. Organize to market right and we will get paid for our work and enough to keep up the fertility of the soil and raise all the world needs of our crops without a horde of rattle-brained experts to sponge off of us.—B. M., Oklahoma.

Cost of the Electoral College.

UP-TO-DATE FARMING is doing much good for farmers by opening our eyes to things as they are. I enclose a clipping which I request you to publish. When farmers get organized in the F. S. E., which I am firm in the belief they will be ere long, they will demand and require Congress to repeal such unnecessary and unreasonable laws.—G. O. Patterson, Hastings, Neb.

The clipping follows:

"Col. Murrell Buckner, messenger from Texas to take the electoral vote to Washington, will draw $1,100 from the federal treasury for taking the certified copy of the vote to that city. It will cost him $40 railway fare and about one week's time. Messengers will go from every state and the total amount paid to them will be about $40,000. Under the law a copy of the vote in each state is sent by registered mail and another copy is sent by messenger. This law and compensation was fixed in the early days of the nation, when the mail was irregular and hazardous, and traveling cost far more than it does now. There is no need of this special messenger service. Several copies could be sent by registered mail and would always reach Washington, and the cost would be only a few cents—a few dollars for all the states. If Congress had the interest of the taxpayers at heart it would change this law, for it is simply a graft."

Organization in Oregon

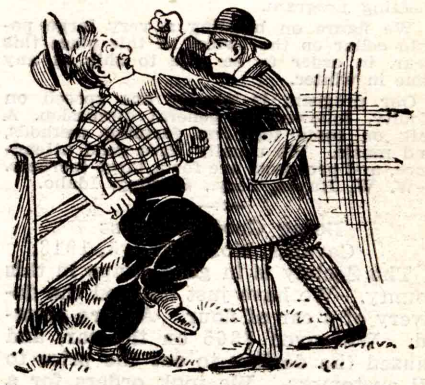
I am obliged to report a rapid growth of our order in Oregon. We will soon organize a state union, and we have incorporated a warehouse company to establish a clearing house in Portland, and a competent man will be placed in charge.

Our county union (Clackamas) held a meeting last Saturday with fourteen locals, representing like five hundred members. We adopted a friendly newspaper as our official organ in this county, and appointed a publicity committee of three, the chairman to edit the space allotted to us by the publishers.

We also have a committee of three on organization, whose duty is to prepare territory in advance for the county organizer by the use of literature.—P. W. Meredith, Oregon City, Ore.

Inspiration in Idaho

Our local at Island had a rousing meeting yesterday afternoon, at which many important matters were thoroughly discussed. The annual election of officers was held and all present incumbents were unanimously chosen to succeed themselves for the ensuing year. All annual dues will be collected at our next meeting, and at which time we expect to place an order for one, or possibly two car loads of woven wire fencing. We will have a Farmers' Institute in two-days' session at Oakley on February 11 and 12. We plan to make this the biggest two-days' meeting ever held in Oakley. Members will have a banquet on the second day, and be entertained by our expert performers. I have started the wheels rolling for a big county union, and during the institute expect to roll in many a new member.—H. G. Morris, Oakley, Idaho.



DEAR ORGANIZER: DON'T SHOW YOURSELF TOO ANXIOUS TO GET A MEMBER. MEMBERS GOTTEN IN THIS WAY MAY NOT FEEL JUST RIGHT.

AT HOME OR TRAVELING.

GET MONEY—I DID—GOT $301.27 worth of plating in two weeks, writes M. L. Smith of Pa.

George P. Crawford writes: "Made $7.00 a day." **J. J. S. Mills**, a farmer, writes: "Can easily make $5.00 a day plating." **Thomas Parker**, school teacher, 21 years, writes: "I made $9.80 profit one day, $9.35 another." See what others are doing—judge what you can do. **LET US START YOU** in the gold, silver, nickel and metal plating business. $5 to $15 a day can be made doing plating with **Prof. Gray's new line of guaranteed Plating Outfits.** Unequaled for plating watches, jewelry, tableware, bicycles, and all metal goods.

We teach you the art, furnish recipes, formulas and trade secrets **Free.** No experience required. We do plating ourselves,—have had years of experience. We use same materials we sell. Materials cost about 10 cents to do $1 worth of plating. All outfits complete. Ready for work when received. **The Royal, Prof. Gray's New Immersion Process.** Quick, easy, latest method. Goods dipped in melted metal—taken out instantly with fine, brilliant, beautiful thick plate, ready to deliver. Guaranteed 3 to 10 years. A boy plates from 100 to 200 pieces tableware daily—$10 to $30 worth of goods. No polishing, grinding or electricity necessary. **DEMAND FOR PLATING IS ENORMOUS.** Every family, hotel and restaurant have goods plated instead of buying new. It's cheaper and better. Every store, jeweler, shop, factory has goods needing plating. Platers have all the work they can do. People bring it. You can hire boys cheap to do your plating, the same as we, and solicitors to gather work for a small per cent. Replating is honest and legitimate. Customers delighted. We are an old established firm—been in business for years—know what is required. "RUBY GORDON Or Back From The Grave" FREE

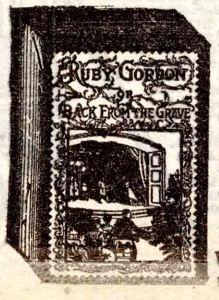
By Libbie Sprague Phillips.



Here is a thrilling story of love, mystery and adventure that will grip your attention from the first word to the last! It is one of the greatest novels this famous writer has ever produced. Ruby Gordon, a poor orphan girl, becomes engaged to one of the young men in the town, who is the adopted son of a wealthy recluse. The old gentleman took a great dislike to Ruby Gordon because she reminded him of his wife who had left him years before and had been lost at sea in crossing the ocean; he felt that she was his wife's spirit reincarnated, and forbade Lawrence, his adopted son, to marry her, and made so much trouble that the young man finally broke his engagement and married another, but it is not their fate to so easily evade Ruby Gordon, as you will discover when you get your free copy of this great book and read the story yourself! Ruby Gordon will surely find a warm place in your heart—she is one of those sweet pure characters every reader admires. We purchased a large edition and will send the book free and postpaid to all who send 10c to pay for a 3 months' subscription to our big farm and home magazine. Send today. Address

Valley Farmer, Book Dept. RG-15, Topeka, Kan.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION: *Do I understand that all membership fees for members received into a local, after its organization, less the twenty cents apportioned to the local union treasury, must be reported and sent to headquarters?—J. H. Merrill, Blackfoot, Idaho.*

ANSWER: Yes, this is right, until you have a state union, when they must be sent to it.

Q. *What is the minimum number that can hold the charter and do business as a local union?—W. G. Hicks, Corbett, Ore.*

A. Ten members.

Q. *Is it always advisable to organize a county union as soon as a county has qualified by having three organized locals?—O. S. Paul, Rexburg, Idaho.*

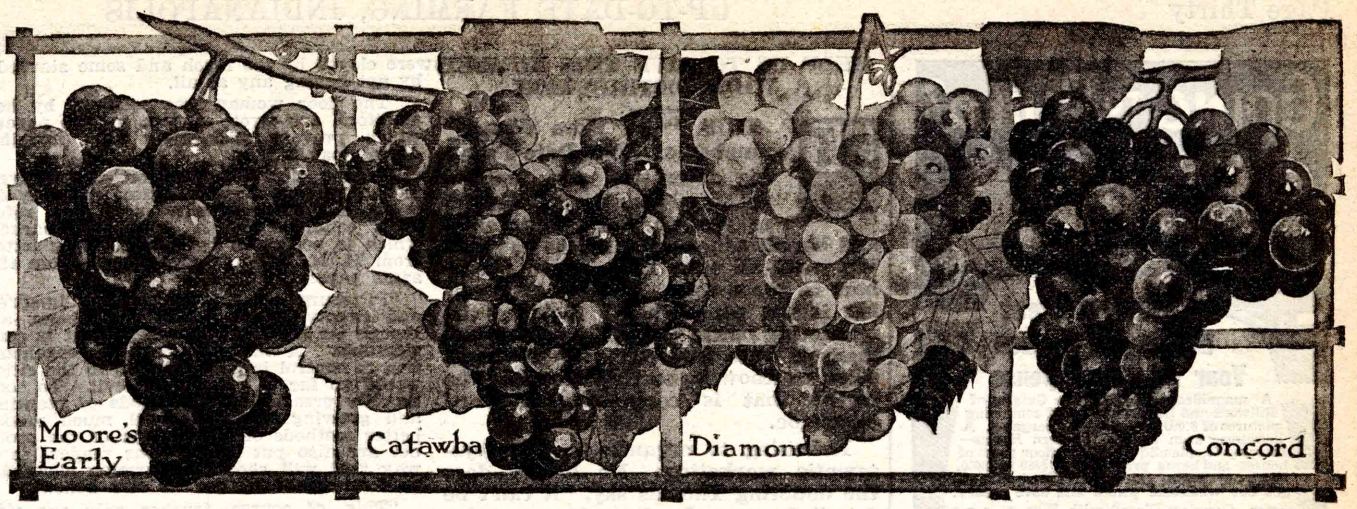
A. If other locals can be organized promptly the county union should be delayed. Otherwise the county union should be organized and it take charge of the work of completing the organization in the county.

Q. *I wish you would inform me if there is a market anywhere in the west for small white pine trees. There are thousands of them here. I am a reader of* UP-TO-DATE FARMING, *and know of no better way to get in touch with the wants of people than through its columns.—Mrs. William S. Straight, Bryantville, Mass.*

A. We know of none except at Christmas season. If your trees are suitable for Christmas trees write F. S. E. representatives about September.

Q. *We were organized the 9th of August, 1912, and will elect officers at our first meeting in January, as provided in the Constitution and by-laws. Our membership fee paid last August was to pay our dues for one year from that date. Should we now pay the difference, from the 9th of August until January 1, or pay nothing until next August?—E. L. Mooney, Secy., Churchville, Pa.*

A. Your dues paying date, calculating on the time you organized is July 1. See section 8, page 4 of by-laws.



Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

Q. *We have a few locals that seem determined to rush into the buying part of the game without regard to how much they antagonize the small retail merchant, and in a way that does not look right, as we understand the Farmers Society of Equity. Perhaps we can handle the matter locally, but for fear that we may not handle it with equity to all we suggest that you advise us through our official paper. Please withhold my name.—Sec.*

A. The great purpose of the F. S. E. is to sell the products of the farm right. Farmers must make their big money in selling, if they make it at all. We believe when farmers get what money they are entitled to from their crops there will not exist the same necessity to scrutinize the prices paid for supplies so closely. But we do not forbid co-operative buying. In fact, it is the logical thing to do when farmers have organized for business. Then all the members of a local union should combine their small orders into a large one; or where there is a country union, all the locals may buy in a county unit. Such requirements should be submitted to the local handlers first and if they will quote satisfactory prices, buy from them. If they will not, or cannot quote equitable prices, the orders should be sent elsewhere. The Farmers Society of Equity claims that the present machine of merchandising is too large, too intricate, too wasteful and too expensive. We will not demand that members of the society shall pay the prices that the present system often makes necessary. So it is up to the merchants' association to simplify their machines and cheapen the operations. We mean that there are too many middlemen selling supplies. Merchants' associations are beginning to see this, too, and one of the best things the Farmers Society of Equity can do is to force them to regulate the number of merchants and see that the necessary merchants maintain clean, attractive stores and carry such assortments at fair prices as will make it unnecessary to send away for supplies.

WE WERE surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent. of the farms in the country. Grape vines are inexpensive to start with. They can be planted fall or spring; they are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and lasts longer. And in addition to all these things, grapes bear fruit practically every year and the fruit is valuable and desirable almost second to none that grows.

Considering the sum of these advantages for the grapes, when we received the census report we were in doubt as to its correctness. We thought nearly every farm had some, so we wrote to the Director of the Census and received this reply:

Up-to-Date Farming:

Your letter requesting information regarding the number of farmers reporting grape vines in our recent report on the "Production of Grapes," received. As you probably know, the census reports on agriculture are based on a farm to farm canvass, and if a farmer grew but one grape vine, he would be reported. The intention is to get a report of every farmer who grew a grape vine in 1909.

Very respectfully,
E. D. DURAND, Per W. J. B.

The fact is that only one out of seven farms has a grape vine. Then there are hundreds of thousands of town homes that have until this time neglected this handsome vine and universally desirable fruit. There is no yard or garden that does not have room for a few grape vines, so we have set ourselves the task to place

ONE-HALF DOZEN GRAPE VINES ON EVERY FARM

and in tens of thousands of other smaller places, and at the same time employ the vines as a means to greatly increase the circulation of UP-TO-DATE FARMING.

This is Our Offer

Send 75 cents and you will get UP-TO-DATE FARMING a full year and will also receive by mail or express, all charges paid, one-half dozen (6) strong two-year-old grape vines with full directions for planting. The varieties are Niagara, Moores Early, Concord, Diamond, Worden and Catawaba. This collection covers extra early to late varieties and the three colors, black, white and red. No better sort can be planted.

All vines will be sent at proper season for planting, no matter where you live.

Yours Free Send a club of four at 75c—$3, and we will send you the paper one year and the collection of six vines free. That is, five for the price of four, or we will send you the paper five years delivered. Paper and vines will be sent to separate addresses if requested. Up-to-Date Farming, Indianapolis, Ind.

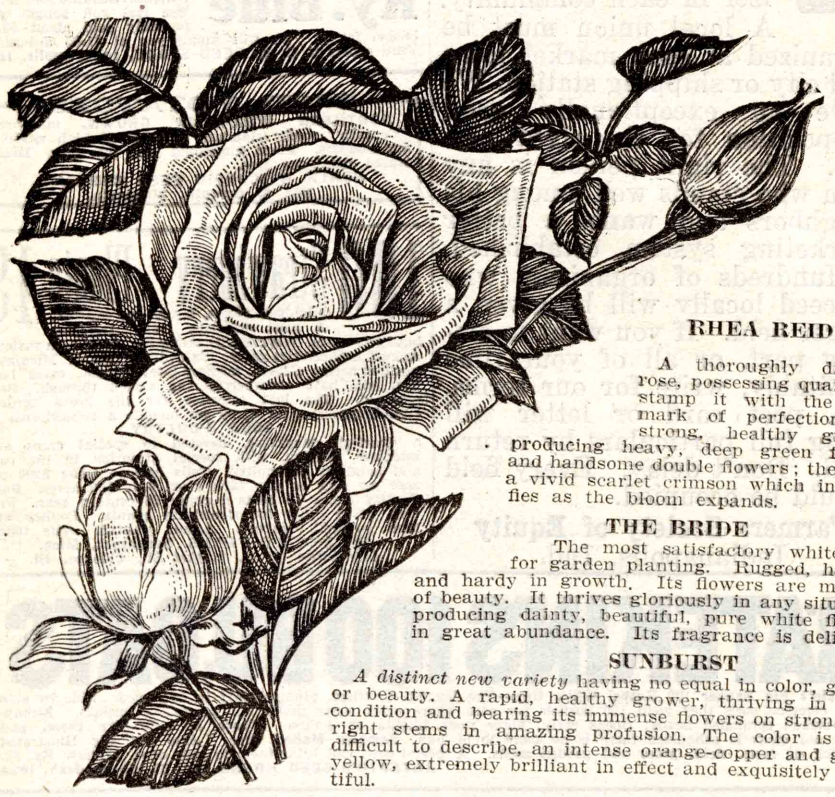
Beautiful Roses Free!

Knowing that at this time of the year the thoughts of all turn to the beautiful things that may be had next summer we know that no offer by us to our readers will be more acceptable than some plants of beautiful roses. We have obtained the best varieties for our subscribers. These roses will bloom every month of the growing season, thriving vigorously with ordinary care. We guarantee safe arrival by parcels post and in each package will be enclosed printed instructions for their planting and care.



RHEA REID

A thoroughly distinct rose, possessing quality to stamp it with the hall-mark of perfection. A strong, healthy grower, producing heavy, deep green foliage and handsome double flowers; the color a vivid scarlet crimson which intensifies as the bloom expands.

THE BRIDE

The most satisfactory white rose for garden planting. Rugged, healthy and hardy in growth. Its flowers are marvels of beauty. It thrives gloriously in any situation, producing dainty, beautiful, pure white flowers in great abundance. Its fragrance is delicious.

SUNBURST

A distinct new variety having no equal in color, growth or beauty. A rapid, healthy grower, thriving in every condition and bearing its immense flowers on strong, upright stems in amazing profusion. The color is most difficult to describe, an intense orange-copper and golden yellow, extremely brilliant in effect and exquisitely beautiful.

MY MARYLAND

A rare combination of a poetic name and exquisite beauty. A great outdoor rose of extreme hardiness. Flowers are of indescribable charm, of a brilliant lively shade of pink which deepens as the flower expands until it fairly glows with its warm, rich color and delightful fragrance.

RED DOROTHY PERKINS—Climber

A perpetual source of wonder. Perfectly hardy, its growth is rapid and vigorous, producing dark, glossy foliage which remains intact to unseasonable weather and attacks of disease and insects which causes the foliage of other climbers to rust and look shabby. The bloom is produced in great clusters; the color being deep intence scarlet-crimson, which retains its vivid brilliancy as long as the flower lasts.

Our Offer **Send 50 cents, the regular subscription price for one year, and we will send the collection of five rose bushes, all prepaid, by parcels post. Bushes will be sent at right season for planting. New or renewal subscribers.**

Yours Free **Send a club of 4 subscribers at 50 cents each—$2, and we will send you Up-to-Date Farming one year and the five roses for your reward. This is five yearly subscriptions and five sets of roses for the price of four.**

HELP US TO GIVE THIS NUMBER A WIDE DISTRIBUTION

IF THIS "Get More Money" number of Up-to-Date Farming interested you, and if reading it has been beneficial to you, then it will interest and benefit others situated as you are. We want all your friends and neighbors to see a copy. Up-to-Date Farming is the paper that is fighting the marketing battle for ALL farmers, but many of them don't know it. We want them to know it, so they can join the legion that is conquering farmers' every foe.

Referring to organization and systematic marketing: No longer does the doubting Thomas say, "it can't be done" because he has the examples every day that it is being done. No longer does the scoffer scoff, but he has become a valued ally because he sees the trend of events.

We have printed 225,000 copies of this number, but we will print more—up to a million—if our readers will help us to distribute them. Think what a million copies of this fearless and powerful paper, teaching the practical plan of marketing farm crops and telling how to establish the sound and enduring organization in a million farm homes, would mean to agriculture. It's just what agriculture needs at this time. If each of the readers will send for three papers we'll have the million circulation; or 15,000 readers send for fifty copies each will give it.

If YOU will deliver a stroke to end farmers' thraldom to a vicious marketing system, send the coupon below at once:

This is the coupon:

The Parable of Spouts and Farmers' Marketing

Apropos of the problem of marketing, Farm and Fireside recently printed a parable which we reproduce as follows:

"There was once a woman who had three kinds of ducks in pens, two sorts of geese—besides her husband—a pen of little pigs, some motherless lambs, a colt that had reached the hay-and-oats stage of feeding, some pigeons, a few cows, a lot of fatting hogs, twenty-five different strains of fowls in separate runs and much other live stock to feed.

"A lot of wise men fixed up an automatic system of spouts through which to feed all these. All she had to do was to shovel feed into the main spout, and the automatic machinery was supposed to convey the feed to the proper pens.

"Oddly enough, it didn't work. The machinery didn't seem to have sense enough to look in the pens to see if there was anything left over from the last feeding. The inventor seemed to have overlooked that. Then it was annoying to have the hay conveyed to the hogs, and the swill to the cows. There didn't seem to be any way to prevent this in view of the fact that the inventor had omitted to give the machine brains. The whole aggregation of birds and animals fell away in flesh. Some of them were buried in feed which they could not eat for one reason or another, some were cloyed by too much and some starved by not having any at all.

"The poor woman was sold out by her creditors, and wrote a piece for the papers which proved conclusively that farming doesn't pay."

To show that the condition as portrayed in the parable actually exists this day in marketing farm crops we need only refer to a condition in the Pittsburg market, which is portrayed by the following letter from H. N. Bartlett, also copied from the same paper:

"Pittsburg has no use for one hundred and twenty-five car-loads of cabbage, although its capacity for sauer kraut is considerable. A national farmers' organization to control large shipments to the cities would go far to remedy the evil. To continually preach better methods of planting and growing will not avail much unless better methods of distribution of the product are also put before your readers in a way that will show the farming class the need of organizing for its own benefits.

"This, of course, touches only one side of the question, but if you outline a program for the producer, the consumer is bound to feel in the end the effect of your good efforts. This is nothing new, but to have such conditions reiterated and the cause of such loss pounded into an apathetic public may some time have an effect that will be beneficial. The farmer, as an individual, is the principal loser, but the public, too, is losing every day through inefficient methods in distribution.

H. N. BARTLETT.

Sure Enough

"Mr. Sorghum Seed gave his word of honor that he would be true to the people," said the farmer.

"Word of honor! What is that?" asked the politician uneasily.

Organizers

THE Farmers Society of Equity wants an organizer in each community. A local union must be organized at each market town and city or shipping station. We have an exceptionally good proposition for the right person. The right person is any man who stands well among his neighbors and wants a better marketing system established.

Hundreds of organizers who succeed locally will be given a larger field. If you want to employ part, or all of your time profitably, write for our terms.

A post card or letter will bring full particulars by return mail. Don't delay. Every field should be occupied.

Farmers Society of Equity

The Problem of Marketing Crops

How it is Being Solved Through Nation-Wide Organization and Federation

(Continued from Page Eight)

of farming. This organization and its system must be able to control the crops when produced, and to decide equitable prices and enforce its demands for their payment. It is no use of us deceiving ourselves any longer that conditions will adjust themselves. Conditions are growing worse each year and will continue to get worse and the fetters of the bad system will be more firmly riveted on the producers if we do not take immediate steps to cast them off. It is no wonder that so many farmers are disgusted with the uncertainties in their business and that they are crying out for reforms. But it will do no good to grumble about the matter and do nothing more. The situation is one that demands ACTION and it must be wise action. We can well afford to look to other business men and see how they solved their marketing problems. If the solution of the farmers'. business problems can be brought about in the same way, then it is folly to continue the old system longer.

How Business Men Solved the Marketing Problem

Not very many years ago a number of lines of business were not much better off as regard certainty of values and profits than agriculture is today. But since then, manufacturers and merchants and bankers and other business men each put forth a concerted effort amongst their own people to increase the efficiency of their operations and guarantee their legitimate profits. Their efforts were directed to reducing the cost of selling through co-operation and to eliminate unfair competition. It was such efforts that have in the past twenty years produced the great combinations and marvelous distributing systems that now makes it possible for the seller of commodities to get the certain, definite, profitable price. Manufacturers figured it out that they could reduce the cost of selling or distribution very greatly if they combined scattered producing plants under one central head or selling organization. That is, substitute one selling expense for a dozen or more selling expenses.

Farmers Twenty Years Behind

Farmers are now in a condition similar to what manufacturers were twenty or more years ago. They have thousands of local organizations, each with its selling organization and individual expense, and these thousands of local organizations are in direct and fierce competition with each other. Until this time farmers, who are the greatest producers of all, have done very little in the direction of concentrating the selling effort at one headquarters. So, while we have great manufacturing and mining and railroad and mercantile activities, with their business systems that are the wonders of the world, we see farmers, twenty of more years behind in business system and the adoption of modern business methods, and still engaged in the most terrific competitions for the common markets, with the unsatisfactory results that are plainly evident on all sides.

So the need is for the establishment of a sound organization for farmers, with a system of marketing that will bring the direction of all crops to the markets, under one head or central control, to the end that all unnecessary expense of passing farm crops to the ultimate consumer may be eliminated.

In other words, the problem for farmers is to organize and adopt a business system that will be as definite in its operations to insure stability of prices and guarantee fair profits, as are the organizations and systems of the steel makers, coal mine operators, tobacco manufacturers, oil producers, etc.

Crops Larger But Mortgaged Farms Increased

The lack of a business system in marketing farm crops is responsible for every serious problem that confronts rural America. Also, it is responsible for that other distressing American problem—the high cost of living. It is a fact, that the crops since the beginning of the twentieth century, have been greater than were ever raised in the country before, yet we are confronted with the fact, as was revealed by the 1910 census, that between 1900 and 1910 mortgaged farms have greatly increased, and that rural population has steadily and rapidly decreased. So alarmingly is the decrease in the rural population considered that it has has been referred to as "Rural Decay." A few figures will show:

Crops Larger But Rural Population Decreased

There lived in the country in 1880, 70.5 per cent. of all the people; in 1890, 63.9 per cent.; in 1900, 59.5 per cent.; in 1910, 53.7 per cent. But these figures do not reveal the actual condition as clearly as the following statement which shows the percentage of counties of some states that actually lost in population from 1900 to 1910, while the cities grew at a marvelous rate: Virginia, 27.4 per cent. of the counties lost in population: Pennsylvania, 28.4 per cent.; Kentucky, 36.1 per cent.; Tennessee, 38.5 per cent.; Ohio, 44.3 per cent.; Illinois, 49 per cent.; Indiana, 69 per cent.; Missouri, 61.7 per cent.; Iowa, 71.7 per cent.

This loss in rural population is clearly due to a lack of attractiveness in country life and country work, and the main factor that enters into the question is lack of sufficient profit and certainty of the profit.

The remedy, then, will be to make agriculture as profitable and as certain for profits as any other business requiring equal skill, intelligence, application and investment.

Get Enough Money

We must come to the conclusion that MONEY, and not altogether LARGE CROPS, is the measure of attractiveness on the farms and the measure of success in farming. Bring about a condition that will give farmers a profitable price for all they market and we will have solved the problems of good homes in the country, satisfactory social conditions, hired help, the boy remaining on the farm, the "back to the farms" movement, etc. In short, if the marketing problem is solved in the way that farming becomes sufficiently profitable, from the time of such solution we predict the tide will be turned to the country instead of as now, from the country to the cities.

The weak point in the farmer's program is his marketing system. It is true that farmers are organized to a very great extent now, but their organizations do ont bring them in unison in anything. There are thousands of associations in which the members co-operate as community units, but these units have no power to co-operate with each other.

It is clear that these must federate and must have a national head where all the reports of crops will be sent, where the necessary control will be exercised and where the demand will be forced to seek the supply.

The Meaning of Co-Operation

Co-operation means a working together. Two men work together when they join their forces to accomplish what one could not do alone. A community co-operates when the people act together to accomplish an object that all desire. But local co-operation, while it helps, is not sufficient in an industry like agriculture, where the same kinds of crops are produced in widely separated parts of the country.

Multiplied Strength.

When the farmers of a community are organized to work with each other it becomes easy for them to do their part in a great national movement. If there is multiplied strength when two or more individuals join to do a job, we can imagine the strength of a whole community of farmers, of a county, of a whole state, or of all the farmers of the country in a combination, all seeking the same object, all directed from the same head, all co-operating to sell and buy together and to demand equity in all the business relations of farm life.

The power of such an organization in determining the selling prices, or securing the advantages in buying will be the combined power of the entire membership.

So farmers must organize—they must co-oerate in reporting crops to a national center, and the national center, co-operating with the local centers of organizations, will exercise the necessary control of the crops and can direct them by the shortest and cheapest routes to the actual demand.

(To Be Continued)

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 8c a Word Each Insertion

Each initial and number counts as a word. No display, except the first few words will be set in capital letters without extra charge. To bring sellers and buyers together there is no surer way than through this BUSINESS EXCHANGE. When writing please say: "I saw it advertised in UP-TO-DATE FARMING.

HEALTH! —SAVED

You **owe it to yourself to *think* about your *health*** even if before you have not been able to keep from *foot* suffering.

Dangerous colds, pneumonia, rheumatism, sciatica, lumbago, lame back and other troubles caused by cold, wet feet, besides corns, bunions, chilblains and tender feet can all be prevented if you write me a postal for my Free Book, "The Sole of Steel."

N. M. Ruthstein
"The Steel Shoe Man"
—Who has made over a million feet happy and comfortable and has been keeping them so to their owner's great satisfaction during the past six years.

MONEY! —SAVED

My **customers have been saved millions of dollars in doctor's bills and shoe bills. One pair of my Celebrated Steels will outwear three to six pairs of leather shoes or rubber boots and give you every-minute-comfort. Keep your feet "powder dry" and perfectly comfortable all the time, winter and summer—protected also against injury from nails, stones and all sharp things that hurt the feet, rip leather shoes or rubber boots.**

Protect your comfort and health absolutely in mud, water, brush, snow and ice, just as well as on good footing, no matter what your work is. I'll send you just the pair to fit you by Parcel Post on 10 days FREE EXAMINATION AND TRY-ON at my risk.

Then, if absolutely satisfied, you keep them and they'll save you from $5 to $20 "shoe-money" this year and probably more than that in doctor's bills.

The Shoe With the SOLE of STEEL

Cures and Protects Your Poor, Aching, Tired, Swollen, Burning Feet—Keeps Them Always Comfortable and Dry—Is Light and Fits Perfectly

Keep Your Feet Glad

Wouldn't you like to keep your feet happy? Wouldn t you like to prevent the torture that bad feet always mean? Wouldn't you like to work in perfect foot-comfort; in shoes that fit all the time; shoes that can't get hard, dry or curled up; shoes that always **keep their shape**? And wouldn't you like to save $5 to $20 per year on the cost of your work shoes? You can do all this and more, simply by wearing my Steels.

Over 600,000 workingmen know these things to be true. They won't wear any other working shoe. They are the actual, the living proof of Steel's true value. And what my Steel Shoes have done for more than half a million, they will certainly do for you.

How I Make Them

No others are like them. I invented them and they are patented and protected against dishonest imitation. Sold only direct from my factory to you at the low wholesale price.

Steel Shoes are different,—better than any shoe ever placed on the market for the workingman. The soles, and for an inch above the bottom, are pressed out of one piece of light, rust-resisting, seamless steel, corrugated at the bottom for extra strength, and studded with adjustable steel rivets for extra wear and for traction on slippery ground.

No Rapairs Necessary

When these rivets wear down you can easily replace them. 50 rivets cost only 30 cents, and make Steel Shoes good for two more years. The soles are fastened forever to the soft, pliable, best-quality, water-proof uppers by an absolutely water-tight connection. Inside of Steel Shoes are springy hair, cushion inner soles which absorb the jar of walking on hard surface.

Now, you can see why Steel Shoes can't rub, chafe, or bother your feet in any way. Think of it!

No Broken Down Arches

Leather shoes break down in the arch, causing the instep to break also, and the result is known as Flatfoot—the most intolerable, uncomfortable, incurable disease that can happen to the laboring man's feet. If it hasn't happened to you, don't run the chance of it another week. Get my Steel Shoes right away on my liberal offer. If it has happened, my Steel Shoes will prove a double blessing to you.

With a pair of Steel Shoes it is impossible to run a rusty nail into your foot, as frequently happens with rubber boots, which often times results in lock-jaw. No ground is stony enough to injure Steel Shoes or bruise your feet. The heaviest, sharpest snags can't penetrate that specially hardened steel.

New 1913 Models in All Sizes —For Men and Boys

For men in sizes 5 to 12—6 in., 9 in., 12 in. and 16 in. high. For boys, sizes 1 to 4—6 in. and 9 in. high. They cost no more than ordinary all-leather work shoes.

You get the direct, factory, low wholesale price. Sent to you by **Parcel Post** the day your order is received.

Absolute Satisfaction on 10-Days' Try-On and Examination FREE.

Any money you ever send me returned as I promised if you are not pleased, absolutely satisfied, and say so yourself.

I Promise You satisfaction and you to be the one to say so. Think man, what this offer will mean to you. It must be absolutely true and so, or I could not advertise in this paper year after year. Thousands of Readers of this paper are my regular customers. I want you for a new customer. Try me. Write me first. Get the whole story. My Free Book "The Sole of Steel" will tell you all the facts and give all the letters of wearers you'll care to read. Many near you, probably. Just write me a postal, or on the free coupon above. Yours truly,

N. M. RUTHSTEIN, "The Steel Shoe Man"

UP-TO-DATE FARMING

MARCH FIFTEENTH, 1913

It is Time to Cut This Trouble Breeding Tree Down

Will You Accept This Great Book of Farm Secrets *If We Send It To You FREE?*

Yes, Sir; A-b-s-o-l-u-t-e-l-y F-r-e-e! For thirty years we have dreamed and planned and worked to produce a book that would strip to the bone ***all*** the theories, facts and knowledge that a hundred thousand farmers know. This book is a marvel among masterpieces. It is what American farmers have waited years for. In plain words and interesting pictures it unfolds a red-blooded story of how to win big farming success. It will stir you from the opening page and grip your interest to the close. Every page reveals money-making farm secrets—every page means money to you, to your loved ones.

"346 Money-Making Farm Secrets Exposed"

In Europe and America we have scoured the rural places for real first-hand information. Theories have no place in this great book. Bedrock experience, sound facts, secrets and ideas fairly shout from its pages. No novel ever held your attention like "364 Money-Making Farm Secrets Exposed" will. Written by the great Dr. Von Tilzer, one of America's foremost agricultural authorities, it will prove worth its weight in gold to you. Thousands of farmers are following out the plans laid down in this marvelous book and making big money. You can, too, if you will. "346 Money-Making Farm Secrets Exposed" has cost us a fortune, yet it costs you nothing. It is our tribute to the American Farmer. Will you accept it if we send it free?

"Get Your Free Book Today, NOW"

This great book—"346 Money-Making Farm Secrets Exposed"—is the most startling farm book ever written. You owe it to yourself to get a FREE COPY of this great volume. Only a limited edition of this work has been printed. Write Now

The Great Dr. Von Tilzer and the *Marvelous Work* He Is Doing for American Farmers

Back of every great movement is a policy and a man. Back of this wonderful book "346 Money-Making Farm Secrets Exposed" is a man known to thousands of progressive farmers—Dr. Bismarck Von Tilzer. Trained on the farm, graduated from one of the leading agricultural colleges of America, spending years in learning the best farming and stock-raising methods in Europe and America—he stands an acknowledged authority. We searched long for a man able to fill this important position. Scores of man-records were investigated—and rejected. At last we found Dr. Von Tilzer. He alone measured up to our exacting demands; he alone was big enough in every way to carry on this great work for the American farmer. At great expense, we have secured the sole services of Dr. Von Tilzer. He is now a leading member of our organization. Through us ***only*** can the services of this great expert be secured.

YOU Need This Great Book *NOW*

Delays are dangerous. Demon Disease is watching for an opportunity to strike down your best live-stock right now. Last year American farmers lost about eighteen million dollars through hog cholera alone. You may have escaped, yet it may be your turn next. One authority states that proper feeding of the 22,000,000 cows in America would add $275,000,000 to the annual farm profits. How much of this are ***you*** losing? This wonderful book, "346 Money-Maki .g Farm Secrets Exposed" will be a revelation to you. It is loaded with money-saving and money-making facts—just the things you have long wanted to know. The agricultural world is going wild about Dr. Von Tilzer's great book. Everything is treated in a scientific, simple, 1913 way — easy to read — easy to understand.

Only a Limited Number to Be Given Away!

"346 Money-Making Farm Secrets Exposed" has cost us a lot of money to produce—so we are compelled to limit the number of free copies. There is ***one*** way to get a free copy of this wonderful book. Simply tear out the coupon, write your name and address on it and mail it to us—***now***—before it is too-late. You want better, healthier and more profitable stock—you want this great book by Dr. Von Tilzer—every progressive farmer does. Here's your one big chance. Grasp it by sending in the coupon now—it brings "346 Money-Making Farm Secrets Exposed" ***FREE!*** Don't put this matter off.

We don't want to write you that every copy is gone. They are being snapped up like corn by a flock of hungry chickens. Get your pencil out now. It will pay you well. ACT!

The Financial Situation in this Country

and in Europe---The Committee of One Hundred Will Mean Nothing Toward Improving Our Currency, Banking and Credit Systems

THE Times-Union, Jacksonville, Florida, copying our quotation from Farm and Fireside to the effect that American farmers have little knowledge of modern banking methods, and would, therefore, be at a disadvantage in a banking system of their own to compete with the banking system in vogue in this country, remarks that it is to acquire this very knowledge that it is proposed to send a committee of one hundred to Europe. We see nothing in that but a trip abroad for a hundred men. Concede that good men should be sent, and that they should earnestly endeavor to get all the information possible, there could be no banking system established on the information acquired until that system should be authorized and provided for by law. That law would have to be adopted by the American Congress, and the Congress is notoriously under the control of the present money power of this country. The present control will not yield one jot or tittle of its power, no matter if a thousand or ten thousand visitors to Europe should suggest a different plan. What we say is proven by the fact that every plan of financial reform that now receives any consideration in official circles emanates from this same money power, and its effect would be to strengthen that power, and make its control of the money more absolute.

Since the beginning of the civil war that power has dictated the financial legislation of the United States. When the necessities of the Government compelled the issue of some sort of money other than gold and silver coin, the proposition was fought strenuously by the money power, and it even then had sufficient influence to compel Congress to make the government notes draw interest. This enabled the financial institutions of that day, though not nearly so strong aa they are now, to accumulate these interest-bearing notes at a profit, as they had already accumulated the gold.

A little later Congress realized that another issue of government paper money was an absolute necessity, and it was proposed to issue non-interest-bearing legal tender government notes. Again the money power asserted itself, and compelled Congress to make the notes only a partial legal tender; they were not a legal tender in the payment of duties on imports and interest on the public debt. The interest on the public debt was due almost entirely to the money power that had got control of the government bonds. This compelled the government to buy gold to pay that interest. The tariff duties had to be paid by the importers of foreign goods, and the greenbacks were not a legal tender for that. The importers had to buy gold. The money power had accumulated the gold, and thus they compelled the legal creation of two markets for it. The government had to buy it to pay its interest to the bondholders, and the importers had to buy it to pay the tariff duties. The money power, the bankers, had the gold, and, of course, they made the price on it. At one time that price reached almost three dollars in greenbacks for one dollar in gold. But the government had to have it for the purpose named, and was compelled to pay the price; and so of the importers. Note this fact: The government had to pay the gold grabbers or accumulators these excessive prices for gold, and then pay it to the bondholders, the very same class of people that sold it at their arbitrary high price, dollar for dollar. This high price of gold was called depreciation of the government paper money, but it was no such thing; there never was a time when the greenbacks were not worth dollar for dollar in the payment of all debts and obligations other than the two excepted in the bill. The soldiers took it dollar for dollar and so did the people in their business affairs, and in the payment of debts whether those debts were contracted before or after the war.

But another thing happened along about the close of the war. The money power had safe control of the gold and silver money of the United States, but the great gold fields of Africa were opened up just then, and ton after ton of the precious metal was being mined. The gold gamblers became alarmed, and feared so much gold would be brought into this country it would be impossible for them to control it and keep up the price. Conferences of the leaders were held, and it was decided to have Congress pass a bill demonetizing gold, and making silver the only full legal tender money issued by the United States. They felt that they could control the silver if they could not the gold. Before this measure was presented, however, the wonderful silver mines were opened in our great west, and thousands of our newly discharged soldiers and other citizens flocked thither, and silver literally flowed from the depths of the mines. This changed the situation of the money power. Those at its head realized that silver had suddenly become their greatest menace. They promptly changed their program, and decided to secure the demonetization of silver instead of gold, which they induced Congress to do in 1873; and that merciless power still controls the gold, and through it all the currency of the country. Congress dares not legislate against that power, and it will not, no matter whether Taft, or Wilson, or Roosevelt is in the presidential chair. As we have said, all the financial measures now seriously discussed, emanate from that power, and tend only to make it stronger. The Aldrich bill concentrates the money power and makes it supreme, absolutely stronger than and independent of the government itself. As we have said in previous articles, the farm loan scheme brings to them an element of control they have not previously been able to reach—the lands and homes of the people.

We care not how many of our people go to Europe to learn things. They will come back with news or plans of little importance to the people of this country. Sending people abroad has become a fad, and as yet we have known of but little good resulting from it. In the present case, what can American farmers do, unorganized as they are? Yes, we have farm organizations, many of them, but they are just as much the rivals of each other as they are of the other classes. In Germany and other European countries, where it is claimed the farmers have a better financial system, the governments are more absolute, and the farmers are better organized and act more in unison. The first thing for us to do is for the farmers to get in position to act together and then secure legislation favorable to reforms in banking and currency. The different organizations may not be able to merge into one. It might not be best if they could. But they could federate. There is nothing in the way of that but selfishness or stubbornness. Federated, the great measures could be taken up, discussed and acted upon in unison. Thus could the farming interests of the whole country be served, and the agricultural power of the entire nation be directed to prevent or secure legislative action. The fact is, we are on the borders of an agricultural crisis in this country. The mistaken ideas of farm teaching that have become a fad, and that involve so much an mean so little, must be guarded or they may result in positive harm; and the question of farm finance as it is now presented and sent out in such fascinating colors is but a piece from the same loom that produced the legislation above referred to, except that it means greater ruin than any that has preceded it. To these we need scarcely add the burning marketing problems that everywhere confront us, and plead for solution.

The farmers of the United States ARE intelligent. We are proud of their intelligence. But they are hedged in by prejudices, suspicious and discriminations. The politicians hold them with a giant's grasp, and the business interests create within them prejudices against each other. Farmers are more suspicious of farmers than they are of any other class. Under such circumstances united effort is out of the question. We plead for organization to overcome these unfortunate conditions, and for a FEDERATION of all organizations to give uniformity of action on all great questions. We wish we could make this appeal personal, not only to the heads of all the farm organizations, but to every farmer of the United States. Events are transpiring rapidly now, and there are questions before the agricultural world that not only need consideration but that need watching. Farmers are endangering their interests and jeopardizing their rights if they do not get in position to do both.

Dairy Interests and the Milk Problem

WHAT we propose to discuss under this head is nothing new. It is in line with what is done in the case of every profitable element in agriculture or farming—every element that can be made profitable to speculators and manipulators whether it is profitable to the farmers or not.

The milk and dairy business is one of the great businesses of this country, and the schemers are after it. In fact, they have almost ruined it. Near the close of last year, C. C. Bowsfield, writing from Elgin, Ill., to a prominent stock and dairy publication, declared:

The movement now observable here to oppose the methods of the buying companies is the most widespread and spirited ever known. Many farmers have reached a state of mind where there can be no compromise. They will simply quit the business or get a selling system which will give them more money. Many have quit and others will follow them.

Among the results so far since the combination cut prices is a decrease of 15,000 gallons in Chicago's milk supply. Up to this point the game has been played into the hands of the system, for with this shortage small dealers cannot get milk for their customers and are being driven out of the business. A higher retail price could be forced under the present stringency and is one of the possibilities.

The speculating buyers stand on the assertion that they cannot do business on less than 100 per cent gross profit, as at present, and that if the farmers are to receive more money it must come out of the consumers in Chicago, where the present rate is 8 cents. The combination is thought to be in a position where it can defy public sentiment. It has a strangle hold on the industry and may be prepared to go the limit. The members of the combine have been shrewdly talking in favor of higher prices for the producers, but insist that the raise shall come out of the pockets of city housekeepers instead of their own.

Whatever conclusion may be reached as to the fair division of the 8 cents now paid, or as to an increase of the retail rate, it will be too late to help the hundreds of farmers who have already quit the production of milk. They only know that they have had the worst of it and are leaving the field to those who still have hope for better conditions.

Under such circumstances the farmers and dairymen are absolutely helpless. The buyers in the cities pay 8 cents a quart for milk for which the farmers are grudgingly paid 3½ cents. To the farmers there is absolutely no profit, the handlers and distributors, controlling the trade by combination, get it all. The above extract shows the result; farmers are driven out of the business. In this all farmers are interested whether they are dairymen or not. Those who are driven to quit the dairy business must find some other branch of farming in which to make a living for themselves and families. That must bring them into competition with the growers of field crops, the orchardists and the truck gardeners. Greedy speculators and distributors are watching these with the same eye to profits that characterize the handling of the milk and butter. How keenly these people watch the production and every additional bushel, pound or dozen brings a prompt reduction of the price paid the producers, and the producers can't help themselves.

Why can't they help themselves? Because they have not combined. They know they are being literally robbed; that themselves and families are doing an inordinate amount of work, are making slaves of themselves, in fact, but they quit their business rather than unite to assert their power and maintain their rights. How quickly could those Chicago milk speculators be knocked off their high perches! After all, they are entirely dependent upon the milk producers. Suppose the milk producers tributary to Chicago would organize so as to absolutely act together, and every one refuse to sell a drop of milk to the graft handlers. Would not the speculators with their entire system graft be knocked out in a single day?

But how would the dairy people dispose of their milk? Easy enough. Establish their own receiving stations, and do their own distributing. The very change would make them financially able to do that, for they would get more for their milk and yet sell it to their customers cheaper than those customers get it now. They might have some selfish city official restrictions to contend against, but we are sure these could be overcome. The benefit to the public would soon be seen, and the public itself would then demand the removal of these restrictions.

This brings us to another thought. It is strange how the official world acts against the producing masses, and at the same time and by the same means against their own nearest subjects. Laws have been enacted by Congress to protect the producers of real butter from the makers of bogus butter; and yet it is charged that the high official whose duty it is to enforce the law openly construes it so as to give his decisions in favor of the makers of bogus butter. We do not know. We trust it is not true. But we have here only another argument for the national, universal, organization and federation of the rural masses.

Government Aid

WE BUT repeat the words of a distinguished southern Senator when we say "the National Government has nothing to give except what it collects by taxation." But in spite of that it is a demonstrated fact that our lawmakers, state and national, are reckless in their appropriation of public money. We fear the party that but recently came into power will prove fully as reckless in this regard as were those who preceded them. Some of their own members in Congress during the recent session openly charged that they were. So many powerful concerns want "help" that it is difficult to keep them from making inroads upon the public treasury, into which, as Senator Tillman says, nothing can go but tax money in some way drawn from the people.

So far as the farmers are concerned they ask no bonuses. All they want is justice. They can easily fight their own battles, if the government will not aid their enemies. The government has no right to protect another. This is why we demand for the farmers the same degree of tariff protection that is extended to the manufacturing concerns; and if the laws of trade, recognized and fostered by national custom at least enable manufacturers to make the prices at which their products shall sell, the farmers are entitled to the same privilege, and they should be encouraged and protected therein.

In this connection we demand of the new Congress the repeal of the Canadian reciprocity bill. That measure still stands, with Taft's signature thereto attached, as a menace and a disgrace to the agriculture of the United States. And when we remember at the time of its passage it had the support at least in the House of the party now in power, it is up to them to purge themselves of that record and prove the sincerity of their pledges to the people.

And the extravagant measures that have been before Congress pretending to be in aid of agriculture, we are voicing more than our own sentiments when we say the farmers do not want them. We refer specially to the Lever bill with its millions of appropriations for no practical benefit to farming, and the land bond-mortgage scheme, which is a menace to the independence of the American home. All the farmers ask for is fairness and equity, and we pity the leaders who refuse to give that.

Inconsistency

IN A farm paper published in the northwest we find the following, which should prove very interesting to the readers of UP-TO-DATE FARMING.

The cause of the high price of butter, cheese, eggs, beef, mutton, pork, poultry and other farm products is that there isn't enough produced to supply the demand. * * * Values of farm produce are still governed by supply and demand.

All who have at all studied the problem of price-making, even the average reader of the average press, knows the above is not a true statement of the case. The editor of the paper in which the above was printed knows that it is not true for in the same issue of the same paper the following appears as an editorial:

All the while housekeepers have been paying a high price for butter during this early winter season, there have been sixty thousand tons of butter packed away in cold storage to be held out of the market while an apparent shortage kept the price up. To all intents and purposes this is a "corner" in butter just as there has been and is now a "corner" in eggs. Philadelphia and Chicago women have proved that eggs are plentiful; the government's suit against the "butter trust" has proved that butter is plentiful.

Natural conditions favored the production of more butter this year than was produced in 1911 and more butter by twenty-five thousand pounds is in storage at the present time than there was at this time last year; yet the price is two cents higher than it was in December, 1911. The art of the butter magnate is masterly. On his sixty thousand tons of the product now in cold storage he may, by careful manipulation of the market, realize profits from ten to twenty million of dollars—depending upon how adroitly he can squeeze the retail trade. Depend on it, he will gather in profits all the traffic can stand—just as the beef trust and the "egg trust" have done for many years.

What can be expected of farmers and their families, so far as reform or understanding the situation that confronts them is concerned, so long as the papers they take and read and look to for instruction are so inconsistent? We love the public press, and we admire it for many things, but we insist that teachers of the public should inform themselves, be consistent in their teachings, and fearlessly support the right. When UP-TO-DATE FARMING ceases to do that it will be ready for a casket.

It Depended on the Comma

The preacher was handed the following note as he rose to open the services: "A person having gone to sea, his wife desires the prayers of the congregation." Not noticing it very closely, the preacher read: "A person having gone to see his wife, desires the prayers of the congregation."

Mr. Dooley and the Giraffe

"Good mahrnin', Hinnissy."

"Good mahrnin', Mister Dooley. Did ye injoy yer mahrnin' male?"

"I did that, Hinnissy, but I wisht all th' toime that I had a nick loike a geeraffe so that I could make things go farther."

"Are ye an admirer iv th' baste?"

"Well, I've often thought iv him, but as a matter iv fact I belave that we alriddy have too mootch geeraffe in our system iv livin'."

"I don't quite catch th' line iv yer argumint, Mister Dooley."

"It's loike this, Hinnissy. Ye see, th' geeraffe is th' tallest iv th' quadroopeds. Sometimes he shtands eighteen fate high in his stockings, not countin' his little short horns. He has sivin vertebray in his nick an' they're what thim scientists call eelongated. That manes, Hinnissy, that they're long drawn out loike th' spaich iv a mon that's talkin' agin th' clock, er loike th' hours whin ye're waitin' fer pay day to roll around. Do you know what I would do if I wus a geeraffe, Hinnissy?"

"Ye'd probably be proud iv yer shpots, Mister Dooley."

"Yis, but ashamed iv me feedin' systim. I'd fix up a wireliss tilligraft imbodyin' th' latest invinshuns an' thin whin I filt a yearnin' an' a longin' in me stummik I'd git me mouth on th' ither ind iv th' line an' find out whin I wus goin' to be fed."

"You say you'd get yer mouth on th' ither ind iv th' line? Why, mon, with wireliss tillygraft there ain't no wires. What would ye hang yer mouth on?"

"Hinnissy, ye are a sharp wan, I tell ye. I'd hang me mouth from me head an' injoy mesilf listenin' to th' click iv th' wireliss inshtruments as they sint in their orders frum th' seat iv hostilities."

"'Th' click iv th' inshtrumints!' Don't ye know that ye'd have to have yer head done oop in a harniss if ye wus takin' wireliss missages? But what's th' geeraffe got to do with th' prisint state iv society?"

"Simply this, Hinnissy. Suppose here we have wan iv thim geeraffes. At th' wan ind iv his nick we have his head an' at th' ither his stummik. Iv'ry toime that his stummik is impty he has to sind out missages along that nick iv his to th' eyes an' ears an' tongue to be on th' lookout f'r spinitch an' cocynoots an' th' staff iv loife frum th' breadfruit tree.

"It's th' same way, Hinnissy, with th' common paypull. They're th' consumers. They're th' folks to be fed. They're miles an' miles away from th' source iv supply. Hinnissy, jijst think how long th' toonel must look whin a consumer shtands at th' bottom iv it with his markit baskit an' waits f'r th' projjoocer to shoot him down a dozen aigs or a peck iv petaytees. Hinnissy, what would ye do if ye wus that consumer shtandin' there?"

"I'd cut out a siction iv th' toonel, jist like I'd cut out a siction iv th' nick iv th' geeraffe if I wus a geeraffe."

"Hinnissy, ye've hit th' nail on th' head. Whin we git to work cootin' out that siction, we'll make ye th' foreman iv th' job."

Editorial Paragraphs

Not for Aldrich.—There are said to be 70,000 members of the Grange in Pennsylvania. Several times have these organized farmers, so we are told by the state president, adopted the following resolution:

We are opposed to the Aldrich central bank scheme, or any other plan that looks toward the taking of the control of our monetary system from the Federal Government.

Dangerous Growth of Power.—According to testimony given before the money trust committee, one man twenty years ago controlled $500,000,000 of the nation's wealth. According to the same evidence that man now controls more than $26,000,000,000 of the nation's wealth. This is more dollars than there are seconds in 824 years. The number is uncountable—inconceivable. Dares anyone say there is no danger to the people and the country in such wealth control?

All Controlled.—The New York World declares that facts and conditions clearly demonstrate the existence of a working control by a closely allied group of power wielding financiers over the banking, transportation and industrial operations of the United States, and that includes farming and agriculture. A close federation of all farm organizations is the only means of rescuing farmers from that control, and saving them from still more dangerous shackles.

Defects in the Schools.—If the boys and girls of this country are not growing up to be progressive and aspiring men and women the fault is undoubtedly in the public shools. Much depends upon the personality of the teachers. Pupils become inspired by the inspirations or aspirations of their teachers the same as they do by like qualities in their parents. Teachers that have no aspirations beyond their books can scarcely lead their pupils to anything higher. There is much to teach that is not in the textbooks, much to lead to that is not brought out in the test examinations. Officials who have charge of the schools should consider these things in the employment of teachers.

Your Work.—For whom are you working this spring? Oh, for yourself of course. But who will get the profits that are sure to result from your labor? That depends upon whether you are paid an equitable price or not. There are so many contingencies connected with the marketing of farm crops that this question is involved in considerable doubt. Don't you believe the farm organizations should all federate so that all can act together in the matter of marketing and thus secure a price that will bring reasonable profits to the farmers, instead of giving unreasonable profits to the speculators?

Thousands More.—Yes, they are coming in by thousands, readers who are anxious to have the real truth about the great matters that are now before the people. We propose to give those truths in as plain language as it is possible to express in English. We are tied to nobody, and we write for the benefit of all. Hence it is not to be wondered at that we want thousands more. We feel that we have a mission, a purpose to accomplish for the agriculture of the country. We brought up these questions when they had never before been suggested, and now the whole world recognizes and is discussing them. Yes, we want thousands more in our great family of readers. Friends, we have done our best to help you, and we have evidently accomplished much. Now help us by speaking to your neighbors about these things.

Federation.—We accord entire sincerity to the great concerns that are proposing so much to aid farming. The best way to aid any business is to make it more profitable to those who are engaged in it. In farming two elements enter into the consideration of its profits. If it is made more profitable to the farmers, it must be made so without increasing its prices to the consumers of its products. The present marketing system is such that the farmers' profits are destroyed by beating down the prices at his end of the line and then making them unreasonably high to the consumers. This could all be remedied by a different system of marketing and distribution, so that the farmers' profits may be increased and yet cheaper prices be made to the users. This could easily be accomplished by an organization of the farmer and co-operation with the organized consumers. Could not those great concerns that offer millions for the benefit of farmers accomplish much more by aiding farm organization and encouraging federation of the organizations that now exist so as to secure this first step toward prosperity, cheaper handling and better distribution? We present this suggestion, and trust all friends of agriculture will consider it.

That's the Trouble.—Uncle Threadbare gets UP-TO- DATE FARMING but he never reads it. He says he doesn't get time, for it is a part of his business to sit about the house with nothing to do. Well, we can't help that. The many good things we print look up at him from the pages of the paper, but they can't speak out and tell him to know. Neighbor Thrifty reads, im to know. Neighbor Thrifty reads, and that is why he gets along so well.

COOMES' CURIOUS CRESS CONUNDRUM

Who Got the Ten Dollars and Thirty-Seven Cents?

From Long Island Agronomist.

THIS is a typical tale of doleful disappointment. It illustrates the astounding absorption of the producer's spondulix and the consumer's coin by Napoleonistic nabbers in a way that would cause Bret Harte's famous "Heathen Chinese" to sing-sing with jealousy. We have gathered a whole slew of facts and data covering just such weird practices which we will herein set down. Some of them come from New England—some from the south—some from the middle states—some from our own wild-and-wooly west—some from the land where the orange tree blows—some from Canada—some from Mexico—and some from that great state—so big that it could easily accommodate the entire population of the world and not have a crowded acre within its borders—this vast empire that one of the United States called Texas. Many of these weirdly wonderful food woppusses have happened to us as well as to other Long Islanders, each and every one of whom is a neighbor—no matter what his present moment nationality.

Neighbor Coomes grows thing to sell in order that he may buy those things which enable him to grow. Like most others of the human family he is not particularly interested in furnishing both capital and labor for the sole enjoyment of some individual making up that gay coterie of buccaneer-like individuals, who without toiling or spinning or in fact investing a six pence—some not even a farthing—wax exceedingly great not to say austere and rich, and this is a happening that really happened, and the conundrum is—"Who Got the Ten Dollars and Thirty-seven Cents?" This is one of our occasional bombs which have blown beyond the ether, the crinoline-skirted yarns labelled—"Supply and Demand Govern Prices!"

Nature has furnished Neighbor Coomes with a perfectly lovely and luscious patch of watercress. It thrives mightly—being fed by an unpolluted creek or rivulet with the food upon which it best does thrive. Seeing in that beautifully embroidered quotation list (daily distributed broadcast by those who control New York's food supply, in order to induce country folks to send them the food upon which they fatten) that watercress would yield to the gatherer thereof 40 cents for every dozen bunches. He knew that the bunches must be good and husky—six or eight inches in diameter and that each bunch must be made up of most delicate shoots and free of all stems and yellow leaves. He knew, of course, that each of these bunches would make ten or twelve of the dinkey little bunches sold to the confiding consumer, but 40 cents looked good to him and he gathered and tied up 312 bunches—then dividing by twelve (which is equal to a dozen) he found that he had twenty-six dozen—multiplication showed that this little gathering of cress would bring him $10.40 from the individual who had so kindly put in the market quotations the value of watercress when landed in the Empire City of these United States. So he purchased a barrel for 15 cents, and found his big liberal bunches more than filled the barrel, so invested 10 cents more in a crate to carry the samples. His little ball of string had cost him but a nickle, so that without counting the wear and tear on his shoe leather, he had expended but 30 cents. A bit of subtraction then showed him that when the city individual sent him the money, the dignified association to which he claimed to belong, said he would, that he would have $10.10 for the day's work, less of course any possible expense he might be put to in contracting possible snake bites or rheumatism and less of course the amount of money a transfer company is obliged to charge in order that it may pay its employees and buy rails and ties and cars and locomotives and spikes and such articles necessary to continue to serve the public, less of course that ever-present and never forgotten "10 per cent. commission" which, while it amounts to more monthly than the salary of the highest paid officials of the great companies in the United States, is simply to cover the occasional purchase of a business lead pencil, likewise all the repairs needed on the speculators' yachts, automobiles and aeroplanes and enable him to keep up his membership in the fifteen or twenty expensive city and country clubs to which he belongs. Whether or not this is a fair getaway is a matter regarding which our opinions are well known and with this case it has little to do that it really doesn't cut enough ice to cool an individual pat of butter. The returns (which Neighbor Coomes was justified in expecting because the paper in which he saw the quotation was of the most eminent respectability and looked on with the highest esteem in his community, further he had been given to understand that all these quotations were most carefully guarded by a body of experts) were, however, startling in the extreme, they, or rather it being exactly 37 *cents*. The slight difference between promise and fulfillment was $10.30. Thus it figures by deducting merely the 30 cents spent for packages and string, an apparent profit of 7 cents remaining to cover the labor of picking 312 jumbo bunches of watercress. Just why the city speculator returned him 37 cents is difficult to imagine, because it costs 2 cents to coax Uncle Sam to deliver the envelope containing the check, while the envelope, the address and the check, of course, were a dead loss—besides that there being only 41 cents—before the time-honored 10 per cent. was raked off—as near as we can figure in the 312 bunches of jubo watercress there could be but 4 cents and, of course, the extra half cent for good measure absorbed by the city man. It is practically impossible to find out who got the bulk of that $10.03. We know that the big barrel and the crate cost 60 cents for transportation between the country and the city man; that left merely $9.43 to account for.

We have lived in the city and we have bought cress and we know that the city consumer did not get the $9.43. Not by a great big jugful, and we are dead sure that Neighbor Coomes did not get it, and we know that the transportation cost only a little over 5 per cent. of what the market quotation promised to pay, and so we will have to leave it to our producing and consuming readers to solve the conundrum or just think and think and think; but take it from us the latter method is distinctly a "no good way."

Like Too Many of Us

"I well remember my first deer hunt," said Uncle Nathan. "There was a snow on and I soon found a track that I watchfully followed all day; but just as night was coming on, I found I had all the time been following it in the wrong direction—been tracking the deer backwards."

Had to Laugh

"Jane," said the mistress, "you must be more quiet in the kitchen after I go to bed. Last night the girl that was visiting you laughed so I couldn't go to sleep."

"Yes, ma'am, I know. She just couldn't help it. I was telling her how you tried to make a cake the other day."

Smile Awhile

Not Long to Wait

Finnegan died, and when he reached the gate he hailed the keeper: "Hello, Peter, I'm glad to see ye. Ye've had a fine job here for a long time."

"We don't count time. With us a million years is a minute, and a million dollars is a cent," replied Peter.

"Be gracious, then," said Finnegan, "lend me a cent."

"All right," said Peter," just wait a minute."

Wilson and the Office Seekers

It is said that President Wilson has received the following letter: "Honorable Mr. President—I hear it said that you are goin' to take a day off to destroy the applications for office you have had. If there is no other job to give, mayn't I have the job of helpin' you tear up the applications? I voted for ye."

Knew Her Aunt

Little Susie had been very naughty, and her mother sent her to her room to confess her sins. When she came back her mother asked: "Did you tell God all about it?" "No, I didn't," said Susie. "You know Aunt Minnie is there, and if I had told it it would have been all over heaven in less than a minute!"

How Did They Get There?

Little Julia was biting her finger nails, and her aunt said: "Julia, you must not bite your finger nails; you will get microbes in your mouth and they will make you sick." With a puzzled look Julia asked: "Auntie, how did your crobes get under my nails?"

Danger at Both Ends

In the early days of the West, two men were prospecting in the foothills, when they were attacked by an enraged buffalo bull. One of them went up a tree and the other dodged into a small cave that was near. The bull stood watching both cave and tree. Pretty soon the man in the cave slipped out, and the bull made for him. He barely had time to dodge back into the hole. Again he slipped out with the same result, except that his escape was even more narrow. The man in the tree called out to him. "You are acting the fool! Why don't you stay in that cave?" "You don't know anything about this hole," came back from inside the mouth of the cave; "there's a bear in the other end of it!"

Rapid Changes

Wife, to her husband who was reading the paper—John, are there fashions in that paper?

Husband—Yes, but they are no use now; the paper was printed yesterday.

Must Have Been the Other Fellow

Old Maid, wishing to buy a piece of music—Have you "Kissed Me in the Moonlight?"

Embarrassed Clerk—I don't think so. It must have been Bill Perkins. He is always up to some sort of a trick.

Large in Contrast

Lover—I freely lay my fortune at your feet.

Sweetheart—Fortune! I didn't know you had a fortune.

Lover—I haven't much of a one, but it will look large down there by those tiny little feet.

He got her.

Very Good Reason

Startem—Why didn't you get a bigger automobile?

Shovem—I wanted one I could push up hill.

Crop Prospects *and* Market Reports

Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

THE government's estimates of grain of last year's crops remaining on farms March 1st, 1913, is as follows, with comparisons with preceding years:

Wheat—1912 crop, 730,267,000 bushels. About 156,483,000 bushels, or 21.4 per cent of the 1912 crop, remained on farms March 1, 1913, compared with 122,025,000 bushels, or 19.6 per cent of the 1911 crop in 1912; 162,705,000 bushels, or 25.6 per cent of the 1910 crop, in 1911, and 160,214,000 bushels, or 23.4 per cent of the 1909 crop, in 1910.

Corn—1912 crop, 3,124,746,000 bushels. About 1,289,655,000 bushels, or 41.3 per cent of the 1912 crop, remained on farms March 1, 1913, compared with 884,069,000 bushels, or 34.9 per cent of the 1911 crop, in 1912; 1,165,378,000 bushels, or 40.4 per cent of the 1910 crop, in 1911, and 977,561,000 bushels, or 38.3 per cent of the 1909 crop, in 1910. The proportion of the 1912 crop which is merchantable is about 85 per cent, compared with 80.1 per cent of the 1911 crop; 86.4 per cent of the 1910 crop, and 82.5 per cent of the 1909 crop.

Oats—1912 crop, 1,418,337,000 bushels. About 604,216,000 bushels, or 42.6 per cent of the 1912 crop, remained on farms March 1, 1913, compared with 289,988,000 bushels, or 31.4 per cent of the 1911 crop, in 1912; 442,665,000 bushels, or 37.3 per cent of the 1910 crop, in 1911, and 365,432,000 bushels, or 36.3 per cent of the 1909 crop, in 1910.

Barley—1912 crop, 223,824,000 bushels. About 62,283,000 bushels, or 27.8 per cent of the 1912 crop, remained on farms March 1, 1913, compared with 24,760,000 bushels, or 15.5 per cent of the 1911 crop, in 1912; 33,498,000 bushels, or 19.3 per cent of the 1910 crop, in 1911, and 42,602,000 bushels, or 34.6 per cent of the 1909 crop, in 1910.

In considering the farm supplies, the visible supplies, as given in the below table, should also be taken into consideration to get approximately the available supply of grain to supply the demands until the new crops. It will also be interesting and valuable to compare prices of former years with the present, since the figures of supply are spread before us. The following shows Chicago cash prices:

WHEAT—The crop of 1909 sold as high as $1.25 in March, 1910; to $1.21 in April; $1.19 in May; $1.14 in June; $1.29 in July, and $1.25 in August.

The crop of 1910 was high at $1.02 in March, 1911; $1.04 in April; $1.06 in May; $1.03 in June; $1.08 in July, and $1.15 in August.

The crop of 1911 sold at $1.04 on March 6, 1912; $1.05 on April 6; $1.04 on May 6; $1.13 on June 7; $1.08 on July 7, and $1.04 on August 7.

CORN—The crop of 1909 was high in March, 1910, at 69c; April, 61c; May, 63c; June, 60c; July, 66c, and August, 67c.

The 1910 crop was high in March at 48c; April, 53c; May, 55c; June, 59c; July, 67c, and August, 65c.

The crop of 1911 sold at 67c on March 2, 1912; 77c on April 8; 81c on May 9; 81c on June 7; 76c on July 10, and 76c on August 7.

OATS—The crop of 1909 was high in March, 1910, at 47c; April, 43c; May, 43c; June, 40c; July, 44c, and August, 38c.

The 1910 crop was high in March, 1911, at 30c; April, 32c; May, 36c; June, 43c; July, 46c, and August, 42c.

The crop of 1911 sold at 55c on March 6, 1912; 57c on April 8; 58c on May 9; 56c on June 7; 49c on July 10, and 33½c on August 7.

It will be noted that in nearly all cases there was a liberal advance in price as the months went by. We predict this year will not be an exception, unless it be for wheat. The crops last year were unprecedently large because of an exceptionally good season. Two such great crops do not usually come in succession. The rainfall at Indianapolis is about 3 inches below normal since the first of the year, which would appear to indicate that, in central Indiana, we are in dryer season. If this is true, and if it is very general, it will affect the crops to be planted and also result in higher prices for grain. As regards feeding grains, though, it must be remembered that the number of animals on farms is the smallest in years. For relative feeding values consider that corn is priced at less than 1c a pound, while oats is 1c plus. Rarely has the feeder, who is getting top prices for fat stock, been able to buy food so cheaply.

The following tells the balance of the market story:

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on February 22, 1913, with comparisons, are shown in the following table: (The sign —before figures means decrease, X indicates increase.)

	Feb. 22 1913 Bushels	Change from 2 wks. before Bushels
WHEAT	70,745,000	—1,418,000
CORN	20,449,000	X 5,032,000
OATS	15,341,000	X 648,000
BARLEY	6,151,000	X 225,000

The visible supply of wheat in Canada on the same date was 44,995,000 bushels. This is 2,064,000 bushels less than two weeks before and 2,121,000 bushels less than a year before. The visible supply of oats is 8,875,000 bushels on the same date, which is 21 bushels more than two weeks before and 2,86 bushels more than a year before.

CLOSING PRICES OF CASH GRAIN

Cash grain closed in the leading markets on March 10, two weeks before and a year before as follows:

WHEAT, NO 2 RED

	March 10			2 wks. before	A yr. before
Chicago	1.02	@1.06	1.03	@1.08	1.01¾@1.03¾
St. Louis	1.11	@1.12	1.05	@1.07½	1.02½
Kan. City	1.00	@1.06	98	@1.12	1.00
Cincinnati	1.06	@1.09	1.06	@1.09	1.01½
New York	1.08½	@1.10	1.02	@1.11	1.02 @1.04

New York	38½	39	

FUTURE GRAIN PRICES

Chicago grain futures closed on March 10, 1913, and two weeks before as follows:

WHEAT—May, 91⅜c; July, 90½c; September, 88⅞c. Two weeks before, 92½c, 99⅜c and 90⅛c, respectively.

CORN—May, 52¾c; July, 53¾c; September, 54⅜c. Two weeks before, 51⅞c, 53c and 54½c, respectively.

OATS—May, 34½c; July, 34⅛c; September, 34½c. Two weeks before, 34c, 34⅛c and 34c, respectively.

COTTON

NEW YORK, March 10.—Middling upland cotton closed at 12.40c; middling gulf, 12.65c. The price of cotton is 20c a hundredweight lower than two weeks before. It is $2.05 a hundredweight higher than a year before.

LIVE STOCK

Indianapolis Stock Market, February 19, 1913.

CATTLE—Range of day's paying prices for steers ..... $6.00@8.50
Range of day's quotations for steers.... 6.75@8.75
Good to choice steers, 1,300 lbs. and up.. 8.25@8.75
Good to medium steers, 900 to 1,250 lbs.. 7.60@8.00
HOGS—Range of day's paying prices..... 3.50@8.90
Range of day's quotations..... 6.00@8.80
Best heavies, 210 lbs. and up..... 8.75@8.80
Common to choice lights, 130 to 180 lbs.. 8.50@8.65

The price of cattle is about 25c a hundredweight higher than two weeks before. The price of hogs is about 15c a hundredweight higher than two weeks before.

CHICAGO PRODUCE MARKET

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last Week	Last Year
Monday	75	98	142
Tuesday	75	38	113
Wednesday	35	30	43
Thursday	25	43*	71
Friday	52	39	67
Saturday	47	50	68
Total, six days	309	298	504

Market had a firm undertone today and fancy Dusty Rurals brought 1c higher than on Friday. Demand was good for Saturday and offerings moved freely, especially when fancy. Receipts included some poor mixed, partly frozen stock that was not wanted and had to be liberally discounted to sell, but sound, clean goods were well taken.

Sales reported were: Wisconsins, in bulk—1 car mixed and showing rot at 38c, 2 cars ordinary at 40c, 2 cars good at 43c, 2 cars at 45c, 3 cars at 46c, 2 cars fancy Rurals at 47c.

Per bu., bulk or sacked, Wisconsin, Kings, or Burbanks, ordinary, mixed, to good sound.. 38@44c
Dusty Rurals, outside fancy..... 44@47c
Minnesota, round white, bulk or sacked..... 38@45c

NEW POTATOES—Market the same as lately quoted. There is a moderate demand for red stock, Bermuda or Florida, but little or no call for white.

Per barrel, Bermuda, red, No. 1..... $6.50@
No. 2 ..... 5.50@
Florida, white, No. 1 ..... @4.50
No. 2 ..... @3.50
Hampers, Florida, red ..... 2.25@2.50

The price of old potatoes is about 5c a bushel lower than two weeks before. The price of new potatoes from Bermuda is unchanged from two weeks before.

SWEET POTATOES—There never is much trade on Saturday. Supply has become small. A firmer market quoted.

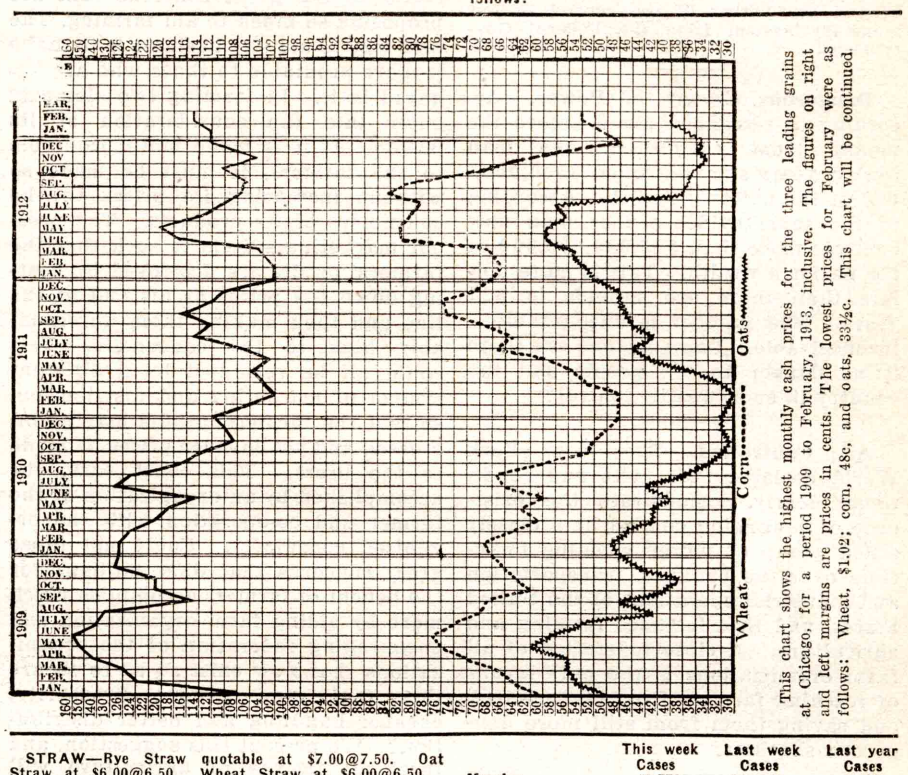
Barrels Illinois, good ..... $3.25@3.50
No. 2, or common stock, faced with a few good ..... 2.00@
Hampers, Jerseys, outside fine ..... 2.00@
Illinois, fine, straight packed ..... 1.25@
Stock a little scabby or stock topped off.. .75@1.00

Change same period last year. Bu.	Change from a year before Bushels	Change from 2 yrs. before Bushels
—2,535,000	X 7,020,000	X 20,557,000
X 2,532,000	X 4,122,000	— 1,173,000
—1,627,000	—1,913,000	— 7,085,000
— 218,000	X 2,535,000	X 4,150,000

Mediums nominally about same as Pea Beans.
Red Kidneys, choice ..... $2.25@2.30
Prime ..... 2.10@2.15
White Kidney nominal.
Brown Swedish, long ..... 1.25@1.50
Round ..... 1.25@1.50
Limas, per 100 lbs. ..... 6.40@6.50

The price of pea beans is about 20c a bushel lower than two weeks before. Prices of other varieties unchanged from two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:



This chart shows the highest monthly cash prices for the three leading grains at Chicago, for a period 1909 to February, 1913, inclusive. The figures on right and left margins are prices in cents. The lowest prices for February were as follows: Wheat, $1.02; corn, 48c, and oats, 33½c. This chart will be continued.

	This week Cases	Last week Cases	Last year Cases
Monday	13,778	*11,306	7,096
Tuesday	15,260	9,563	7,207
Wednesday	13,530	7,395	7,030
Thursday	12,050	8,979	7,327
Friday	10,031	8,394	6,563
Saturday	10,685	8,161	7,983
Total	75,334	53,798	43,206

*Two days.

Receipts April 1, 1912, to March 8, 1913, 3,127,600 cases.
Receipts April 1, 1911, to March 9, 1912, 2,609,681 cases.
Receipts April 1, 1910, to March 11, 1911, 3,163,965 cases.

The market was steady at ¼c further decline in prices. Spring-like weather was a weakening factor.

There was a more general and broader demand again, influenced by the reasonable prices and moderate receipts. Consumption is large.

Eggs are going into daily use freely. Of course buyers want to purchase as cheaply as possible and are watching the market very closely, taking into consideration every factor—such as the receipts, the movement at the interior, the weather and conditions at other markets—all points are being considered at present, especially so as prices are nearing what many think a low level.

Miscellaneous lots, cases returned, 16½@17c, depending on quality.
Ordinary firsts quotable at 16@17c.

Firsts quotable steady at 17½c. There were sales at this figure, and that was bid for more.

Checks—Fresh quotably 13@13½ per dozen.
Dirties—Fresh quotably 14@15c.

The price is practically unchanged from two weeks before.

STRAW—Rye Straw quotable at $7.00@7.50. Oat Straw at $6.00@6.50. Wheat Straw at $6.00@6.50.

Rye and Oat Straw are each 50 cents per ton lower than two weeks before. Wheat Straw unchanged.

HAY—Receipts, 750 tons. Choice hay in light supply and demand good. Market firm. Low grades quiet. Demand light and offerings liberal.

Choice Timothy Hay ..... $17.00@18.00
No. 1 Timothy ..... 14.00@15.00
No. 2 Timothy ..... 11.00@12.00

Timothy Hay is $1.00 a ton higher than two weeks before.

BROOM CORN—Not much doing, just a quiet trade. Best grades held steady and poor corn very dull.

Per ton, Illinois Corn ..... $100@120
Oklahoma ..... 50@ 65

Broom Corn is unchanged from quotations of two weeks before.

BEANS—Have continued to rule quiet. A day or two ago a decline in prices was noted for Pea Beans. Since then there has been no change. Demand has been and is light, only from hand to mouth. This is partially due to quality not being satisfactory. Market for other kinds very quiet. Brown Swedish have hardly any call. Some inquiry exists for White Kidney for seed. Hardly any are good enough for this purpose. Nothing to speak of doing in Limas at this season.

Pea Beans—
Hand-picked, choice ..... $2.05@2.10
Really fine, bright ..... 2.20@2.25
Prime ..... 1.95@2.00
Prime ..... 1.95@2.00
Stock faulty ..... 1.00@1.50

APPLES—No new feature has come over this market in some time. There is but the one condition, a fair trade and plenty of stock of draw from.

Very fancy apples in barrels, selected goods most carefully packed, bring above the regular quotations.

Market no More Crops the Old Way the Equity System is Better

WHEN TO SELL WHERE TO SELL HOW TO SELL

Tell us below what you have to sell now, or will have in the future, and we will help you to get it to the best market. This applies to grain, live stock, cotton, vegetables, fruit, hay, eggs, poultry, in fact any farm crop. Fill out the following blank very plainly. No attention will be given to blanks illegibly written.

The Problem of Marketing Crops

By J. A. Everitt

These articles have been prepared to answer ever-occurring questions how a sound and enduring farmers' organization, equipped with a practical marketing system to protect the producers of crops, can be established. And the problems considered in this article are not solely farmers' problems, but problems that concern every individual in the United States. They are nation-wide problems, therefore they must have an interest for all the people. A careful reading of the entire article is urged.

Chapter II

THE EQUITY SYSTEM OF MARKETING

A Practical and Successful Plan of National Organization and for National Marketing of Farm Crops

THERE are two things that enter into every complete effort in farming—the raising of the crops and the marketing of them. Each of these are of the most vital importance. Of course, if a crop is not raised, a market is not needed. But when a crop is raised, if it is not marketed to bring a satisfactory and profitable price, it might as well, as far as the farmer is concerned, not have been grown. Notwithstanding that these two things are vital in nearly every complete farm operation, nearly all of farmers' teachers and leaders pretend to see only one of the things, that is the producing of the crops. They have been willing to leave the other thing to the expensive and unreliable system of marketing operated by the modern produce exchanges and gambling boards of trade.

That is the system that has permitted toll gates to be erected all along the tortuous routes that the necessaries of life must travel to market and which compels the producer and the ultimate consumer to pay about 60 cents for passing about 40 cents' worth of produce from the farm to the kitchen. It is the system that has robbed our farms of fertility and has kept farmers comparatively poor, while it has made millionaires of many of the people who produce no crops but who handle the crops through the system.

Farmers Must Have Exact Knowledge

The time has come when farmers must have their own organization and their own system and they must have an exact knowledge of their own business as other people have who are successful. For instance, to sell crops at profitable prices there must be markets that will pay profitable prices and we must know where they are. Individual producers could not know this and this fact has caused many of them to organize in local or district bodies. When the crops are moderate these organizations are able to help very much, but when the crops are large, such competing organizations have very little more power to get profitable prices than the individual had. Notwithstanding that there are several thousand such organizations, representing nearly every heavy producing community in the country, the problem of marketing is not solved. Three things are absolutely necessary in a marketing scheme for farm crops that will solve the problem.

The first is to know where the supply is and how much it is.

The second is to know where the demand is and how much it is.

The third is to control the supply and compel the demand to go to it.

A National Clearing House Necessary

That is, instead of the supply being available in every producing community in the country it must be reported to one central place, as a clearing house, and that be authorized to sell all of the supplies. When this is done, that is, when all of the supply is reported to the clearing house, or enough of it to control the situation, then the demand will express itself at the same place and it will be an easy matter to direct the supply to the place where the demand for consumption exists.

To bring this about, there must be concert of action.

To get concert of action there must be a degree of organization.

Farmers' Marketing Machines Were Wrong

An organization is only a machine, and a machine is built to do some certain kind of work. If it is built along right lines it will do the work intended. The great trouble with farmers' marketing machines heretofore was that they were not built right, or they were not large enough. They were built to fit the local needs. But agriculture is a nation-wide industry and requires a national machine. So the task is to build a national marketing machine. This machine must be able to get a report of the supply and where it is, a report of the demand and where it is, to control the supply until the real demand needs it and to direct the supply, with one central intelligence, so that it will be sent straight to the demand.

The object of having one central head or clearing house and one central directing intelligence is to prevent sending supplies in roundabout ways, thus incurring unnecessary expense for transportation and running unnecessary risks of deterioration, and to prevent oversupply or gluts in any place and under supply or dearths in other markets.

All Not Needed

And right here let it be understood that it will not be necessary to bring all producers into such an organization and system, nor that the machine shall necessarily cover the entire country at first. Nearly all crops have their chief districts of production. Such chief districts organized will be sufficient to control those crops to an extent that the demand will be forced to seek them where controlled—at the central clearing house. This, it is plain to see, will give the producers, or their representatives, the opportunity to ask and get their own prices. As soon as many such districts are organized on the plan as we will outline, the whole general proposition will be helped, because nearly all farmers grow several crops and in organizing these districts to bring special crops under quick control, other crops produced by the same farmers will also be brought under control. The Farmers Society of Equity is for all crops, for all farmers and for the whole country.

The Three Organizing Steps

To carry out this plan requires that three steps in organization be taken, as follows:

The local organization, or local union, the county organization or county union, and the national organization, or national union. Naturally the farmers must proceed from local centers.

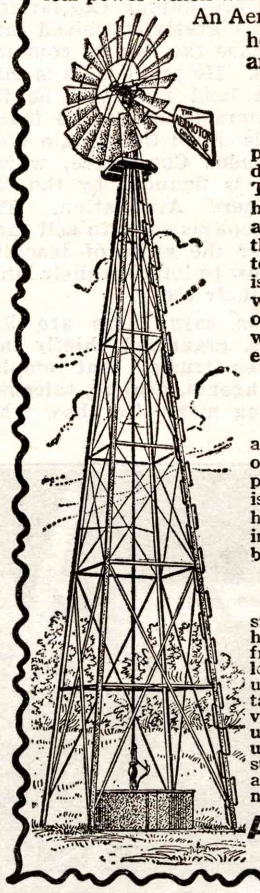
The First Step

The local center, or as we call it, the local union is the home workshop of the farmer. It is the meeting place when any matter of local concerns calls the attention of the farmers of the community. Also through it the farmers are connected up with the higher unions which are necessary in this system of marketing crops and buying supplies for the farm and farm home. The local union can also be made the social center of the community.

(Continued on Page 21)

Water to Float a Navy

If all of the water which has been pumped by Aermotors could be collected in one great body, it would form a sea on which all the navies of the world could maneuver. But you do not have to pump oceans of water to supply your own needs. What you want is some reliable and economical power which will supply plenty of water for your house, barn and fields. An Aermotor of suitable size erected on a tower of proper height will do the work for you without bother or worry and with practically no expense.



Power for Pumping

It costs nothing for power if you use an Aermotor to do your pumping. More water is pumped by Aermotors for stock and domestic purposes than by any other kind of pumping machinery. They do their work silently, surely and satisfactorily. Aermotors have been pumping water faithfully for the past 25 years. Go to any part of the inhabited world today and you will find the Aermotor there ahead of you. From Alaska to Patagonia, from Hongkong to Liverpool, from Siberia to the Cape of Good Hope and on all the islands of the sea you will find them. You cannot travel far today without seeing an Aermotor standing out as the most prominent object in the landscape. Aermotors have gone everywhere because wherever they have gone they have been found to be the most economical, and most reliable device for pumping water.

Count the Cost

The price of gasoline has taken a big jump. It is likely to go up again any day. The air is free and the supply is inexhaustible. No one can corner your source of power if you use an Aermotor for pumping water. The first cost of an Aermotor is small, the upkeep is almost nothing, the service is most satisfactory. Anyone who has used an Aermotor will never be satisfied with any other pumping device. It was the first steel windmill and has always been the best. Aermotor Galvanized Steel Towers are best, too.

"Storage Solves the Water Problem"

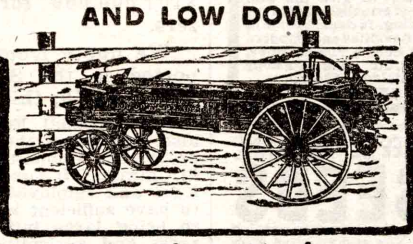
We have just issued a large hanger, 16 x 44 inches, on the above subject. It contains over 100 pictures of Aermotor outfits which have been pumping water for the farmers of one community for from 1 to 20 years. These picures have been made from the finest lot of farm photographs that have ever been taken. If you will put up one of these hangers in your living room it will be the most talked about object there. It is 100 pictures in one and each individual picture shows a prosperous farm where the Aermotor is used for supplying all the water required. This hanger gives valuable information about the storage of water for household and stock purposes. You should certainly have one. It is free for the asking. Just one word "Hanger" on a postal card, with your name and address, will bring it.

Aermotor Co. Twelfth Street and Campbell Avenue, **Chicago**

APPLETON

RETURN APRON ENDLESS APRON AND LOW DOWN

MANURE SPREADER



Solid oak, trussed frame; worm and worm gear apron drive, encased, runs in oil; wood or steel wheels.

So simple a boy can run them. Apron works over chilled rollers. Wide seat, comfortable foot rest.

Appleton Manure Spreaders always give long service; spread even, pull easy; because they are perfectly designed and honestly constructed. An Appleton Manure Spreader is a profitable machine for you to buy. Its use keeps your land healthy and in highest productive condition—that means paying crops. Self-Interest in Help to Farmers

WE ARE greatly surprised at some emphatic avowments attributed to Dr. Cyril G. Hopkins, chief in agronomy of the Illinois State College of Agriculture, and one of the most noted soil experts of the country. His charge is, according to the press, that the great fertilizer interests of the United States are duping the farmers by means of a cleverly conceived campaign to increase the sale of commercial fertilizers. He predicts, it is said, that ultimate land ruin will be the result if farmers listen to the teachings of what is called the Middle West Soil Improvement Committee, which, it is claimed, is financed by the National Fertilizers' Association. The plan is, Dr. Hopkins says, to sell their products under the guise of teaching the farmers how to improve their lands and increase their crops.

Dr. Hopkins says there are 550 manufacturers, organized chiefly into great fertilizer trusts, that employ thousands of agents, dealers, salesmen and advertising men. To show what the fertilizer trade means, reports for 1909 show that the farmers of the United States paid, during that year, $104,000,000 for commercial fertilizers.

We quote from Dr. Hopkins as reported in the St. Louis Republic of February 10, this year:

The National Fertilizer Association has also established the "Middle West Soil Improvement Committee," with headquarters in Chicago. It has gone to agricultural colleges and employed men who were thought to have sufficient knowledge and reputation to bring large influence to bear upon the press and agricultural people, particularly through the publication of bulletins and the giving of addresses at farmers' meetings, where their names might be placed on programs with the title of "Professor."

"Enormous sums are provided to be used to encourage the use of "complete" commercial fertilizers.

A "complete" commercial fertilizer contains some of each of the three elements nitrogen, phosphorus and potassium. The most common "complete" fertilizer contains in one ton about 33 pounds of nitrogen, 80 pounds of phosphorus and 33 pounds of potassium and is sold at retail from $20 to $30 per ton.

A fifty-bushel crop of corn takes from the soil 75 pounds of nitrogen, 12 of phosphorus and 36 of potassium. Such a crop would require more than a ton per acre of such fertilizer to supply the potassium, or more than two tons to furnish the nitrogen or from $4 to $6 worth to provide even the phosphorus for one acre of corn yielding fifty bushels.

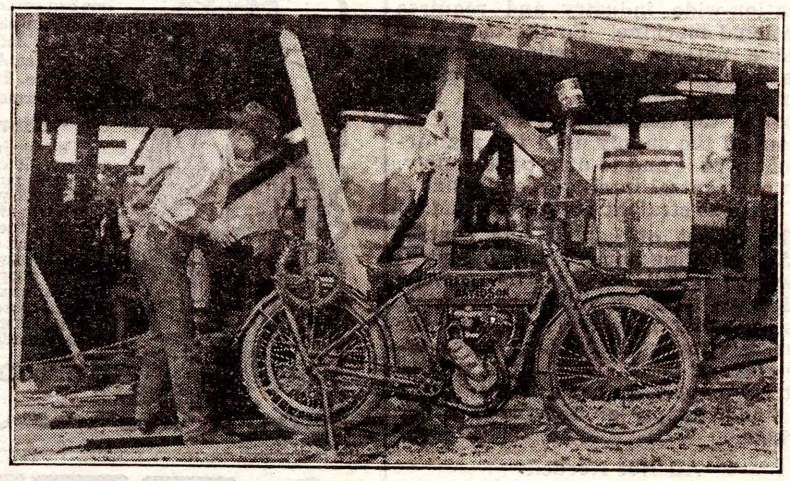
"If we turn to the results of definite experiments by experiment stations we have a right to expect to learn the truth, at least, concerning the temporary affect of using such fertilizers.

According to Bulletin No. 155 of the Indiana Experiment Station, the increase, as an average, was never sufficient to justify the tenant in paying for the fertilizer and depending upon one-half of the increase for his profit.

Director Thorne, of the Ohio Experiment Station has reported the results of seven years' investigation. In no case did a "complete" fertilizer produce as large an average increase as was produced by steamed bone meal.

The only purpose of the National Fertilizer Association in publishing various statements is to influence farmers to use commercial fertilizer as they describe and advise, and the enormous sums paid by farmers for such materials certainly indicate that such advertising accomplishes its purpose.

We feel justified in giving the above from such an authority as Dr. Hopkins. From a less authority we would not give it. Soils must be fertilized, and we recommend the use of fertilizers, but we deem it only proper to give our readers the above warning. Farmers are humbugged enough in the marketing of their stuff, without being humbugged also in its production. It will be found that most of these great efforts to "help the farmers" have strings to them somewhere. We note that most of these concerns are urging such measures as the Lever bill, which will establish at public expense, most effective machinery for the sale of many commodities. A card before us shows that the National Soil Fertility League is one of them. The only hope we can see is for farmers to get in a position to care for themselves.



THE MOTORCYCLE IS A REAL HELP IN MANY WAYS

THE QUESTION OF FERTILITY

IF IT is true, as is so unequivocally charged, that much of the commercial fertilizers are not what they are claimed to be, and range from very inferior to almost worthless, what are farmers to do to restore or maintain the fertility of their soils? Crops can

A valuable Free Book on CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." This book is truly a most remarkable source of information on the subject of clover raising. For the first time the opinions and experiences of the world's greatest clover authorities and practical growers have been gathered together in printed form. Every question you can think of is fully answered. It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and more milk—that puts immediate cash money in your pocket. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; it tells all about the causes of "clover sickness" and how to deal with it. These and hundreds of other questions are answered, covering sixteen clover varieties, including Red, Mammoth, Crimson, Alsike, Sweet, White, Yellow, Japan, Berseen, Burr, Serradilla, etc.

This book is a gold mine of information to the farmer who is looking for bigger and better results. Ordinarily this book is sold for 35 cents per copy, but for a short time we will mail a free copy, postage prepaid, to the readers of this paper, or until a certain number have been distributed. If you will write at once you will be sure of getting a copy by return mail.

not grow without something to grow upon, and every crop consumes, so to speak, a quantity of plant food. Unless this food is in some way restored exhaustion must follow. Farmers must fertilize or they must encourage nature to fertilize for them. We have used and favor the use of commercial fertilizers, but, of course, care must be exercised so as not to be defrauded or swindled into paying high price for an article that is of little value.

There are other means of fertility that should be neither overlooked nor neglected. More or less stock should be kept on every farm, and the more the better, within due bounds, of course. Where stock is kept, land will be used for pastures. Such land is resting, and the stock are constantly adding to its fertility, while, at the same time, they are cleaning it of many of the most obnoxious weeds and other growths. The farmer who keeps stock and is able to change from pasture to cultivation and from cultivation to pasture, need not worry much about fertility.

Then there is the barnyard manure, that costs nothing but is more valuable than any he can buy. Not a pound of that should go to waste, and it should be handled so as to do the most good. See that it gets onto the ground, and, preferable, that it is turned under. Even spreading is the important element, and on this account the spreader is almost a necessity. We wish there were a simpler and less costly machine for that purpose, but we must accept what is available now.

In this important work invite Nature to help you. She stands full handed and will never refuse. Rotate with the crops that add to instead of take from the soil. Clover, alfalfa, field peas and other legumes. Nature ordained these for soil improvers. Forty-five miles of substance richer in nitrogen than the commercial fertilizers floats over every foot of the earth's surface, and this nitrogen these leguminous plants gather from the air and leave it in the soil in the best possible shape for future crops to feed upon. Frequently turn the whole crops under, or, if you have not the courage to do that, cut off the main crop, and turn under the second growth.

After all, there is no question but that farmers may maintain the fertility of their farms.

THE BIGGEST LEAK

If the flour bin leaks you are careful to stop it; and if the oil can leaks you throw the can away and get a new one. But the greatest leak of all is around and about the barn. Do you realize the value of the fertility that goes to waste there every year? The manure of a single horse during a year is said to contain 130 pounds of nitrogen. Nitrogen cannot be bought anywhere for less than 8 cents a pound. Here we have the cash value of a single element in the manner of one horse to be $10.40. In addition that manure has some potash, some phosphoric acid and not a little humus.

On many farms several horses are kept, besides cattle, sheep and hogs, and how seldom do we find any special means of saving the manure from these animals! Exposed to the weather these elements are quickly washed out and lost. Sure enough, could there be a greater leak anywhere on the farm?

Do not hesitate at the expense of preparing a place where this manure may be gathered and saved, and with it the litter that necessarily accumulates in the stalls and about the barn. It is all valuable, and if kept in the dry until it can be carefully and properly spread on the fields, its value will be gathered in the following crops and realized in the continued fertility of the soil.

A Million Dollars Worth In The Government Service

THE World's Largest Motorcycle user, the United States Government, uses more Harley-Davidsons than all other makes combined. These machines are to-day used by nine different government departments.

In the Government Mail Service alone there are over 3,800 Harley-Davidsons in daily use, collecting and delivering mail—a fitting tribute to their reliability. The

HARLEY-DAVIDSON

to-day holds the World's Economy Record, as well as World's Records for Endurance and Reliability. It is the only motorcycle made with the Ful-Floteing Seat and Free-Wheel Control (both patented features), two of the greatest comfort devices known to motorcycling.

The Ful-Floteing Seat places 14 inches of concealed springs between the rider and the bumps. These springs assimilate all jar and vibration, thus doing away with the great discomfort of the ordinary motorcycle.

The Free-Wheel Control permits the stopping and starting of the Harley-Davidson without the customary running alongside or hard pedaling. Instead this machine can be stopped and started by the mere shifting of a lever. This, and many other exclusive features, will be willingly demonstrated by any Harley-Davidson dealer.

Call on him for demonstration or write to us for illustrated catalog.

HARLEY-DAVIDSON MOTOR COMPANY

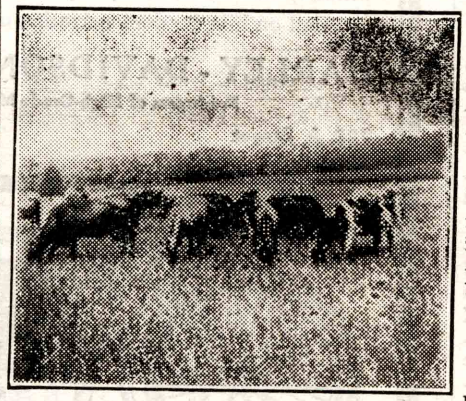
THE CATTLE SITUATION

WHAT we have said of the scarcity of cattle in this country, and of the safety to farmers in an increased production thereof, is fully borne out by the forty-seventh annual report of the Union Stock Yards Company, of Chicago, which was recently issued. It says the scarcity of cattle is not confined to the United States. The world's principal cattle producing regions are Australia, South America, the United States and Canada. Australia is just recovering, says the report, from a severe drought, and that country cannot supply much surplus cattle for a number of years to come. Argentina's (South America) live stock interests have been crippled by three successive seasons of drought,



COWS IN PASTURE

followed by foot and mouth disease, and having unfortunately sacrificed too many cows and heifers in an effort to hold the more valuable steers during the drought period, that region is now short of breeding stock. Argentina must therefore, first raise more breeding cows before she can begin to produce a normal crop of beef steers ready for slaughter. Canada, the report declares, has none too many cattle, and with a severe climate, short season, and without corn, cannot produce largely, and England will outbid the United States and the world for all the cattle Canada can produce.

We believe these conditions abroad are much as they are outlined in the report, yet in view of the tariff agitation in Congress the statements may be taken with some degree of allowance, as their purpose may to some extent be to allay the minds of our cattlemen as to tariff abolition or reduction. The report itself ventures to say that even if the tariff on beef be removed the United States will get no beef from South America, and cattle raisers have nothing to fear from South American competition. The packers would like to have free trade in beef and cattle.

We are principally interested, however, in our own supply, and that is confessedly short. The report mentions several causes for this scarcity, among them being the partial drought of 1909 and 1911, and the general drought of 1910, which extended all over Canada, Mexico, and the western two-thirds of this country. This forced prematurely to market vast numbers of young female cattle, and thus greatly reduced the number of breeding cows. This being the case, years will be required to recuperate the supply, and high prices must prevail.

But it is possible, the report admits, that there may occur spasmodic seasons of temporary over-marketing, which may depress values for short periods to be followed by seasons of severe scarcity at market, and abnormally high prices. Such a season is liable to occur, continues the report, within the next sixty or ninety days, "but may be easily avoided if the feeders will hold the stock, regardless of market fluctuations, until they are mature and ready for market. The only danger is in a premature rush of unfinished cattle on the market, thereby bringing upon the growers and others the very conditions they fear." Even the packers admit and vindicate the teachings of Equity. The report closes as follows:

We sum up the whole situation as follows: (1) That there is a world-shortage of cattle, and cheap beef is a thing of the past. (2) Farmers and stock-raisers of the United States have nothing to fear in the way of cattle or beef competition from either Mexico, Canada or South America, during the next decade, or longer. (3) Henceforth, our corn-belt farms must be looked to more than ever before for a domestic beef supply; or the American people must face a serious beef famine. (4) To save the calves and to breed and raise more and better cattle is a duty corn-belt farmers owe their country—and a necessity for the preservation of the declining fertility of their own lands. By buying foundation-herds of good cows and pure-bred bulls, or pure-bred animals of both sexes—and present relatively low cost, owing to cessation of range demand, is almost on a level with beef prices—together with economical, improved methods of beef production, involving the raising of more corn, the building of silos for both winter and summer use, and the raising of alfalfa—this branch of farming may be made to pay a large annual net profit, through a series of years, and will confer greater and more lasting benefits upon both producer and public, than any other now presented to the corn-belt farmers of our country.

He'd Risk His

Susie—Jim says I've got the prettiest mouth in the world.

Tom—That may be, but I'd be willing to put mine up against it any time.

EMPIRE Cream Separator Factory WORKING NIGHTS

We owe a great deal to our friends, among whom are many very particular people. They recommend Empire Cream Separators so enthusiastically that our factory is compelled to work nights to meet the demand.

Empire Cream Separators

are wonderfully efficient, remarkably sanitary and world renowned for easy, quiet running and great durability.

The adjustment and care of an Empire could not be simpler. When properly adjusted and cared for, the Empire will start under the weight of the short, light crank and the machine runs so quietly at full speed, that it would not wake the average child asleep in the same room. You may have

DE LAVAL CREAM SEPARATORS

No Excuse for any Cow Owner Being Without One

There is no reason why any cow owner who sells cream or makes butter should be without a cream separator and there is no excuse why he should not have the best separator.

Any creamery man or experienced dairyman will tell you that a good cream separator will give you a great deal more and a great deal better butter than you can make with any gravity setting system, and equally, of course, more and better cream, if you are selling cream.

The DE LAVAL is acknowledged by creamery men and the best posted dairymen the world over to be the **"WORLD'S STANDARD"** and the one and only separator that always accomplishes the best results possible and always gives satisfaction.

You cannot make the excuse that you can't afford to buy a De Laval, because it will not only save its cost over any gravity setting in six months and any other separator in a year, but is sold either for cash or on such liberal terms that it will actually pay for itself.

A little investigation will prove to you that the truth of the matter is that you really can't afford to make cream or butter **without** the use of a DE LAVAL cream separator.

The nearest De Laval local agent will be glad to demonstrate this to your own satisfaction, or you may write to us direct.

MUST COME FROM THE FARM

A PROMINENT Chicago paper declares that in the future our beef supply must come from the farms. The reason given is that the ranches are being cut up and sold for small farms, and that makes impossible the great western herds to which the country has so long looked for its principal beef supply.

This may be an advantage to general farming, for it makes stock raising more imperative on the farms all over the country, and promises that it will be a profitable business. It also makes more certain the maintenance of soil fertility.

But the increased growing of live stock on the farm to the extent of supplying of the western deficiency, and the greatest difficulty is in the amount of tenant farming that now prevails, and that is increasing from year to year. Tenants seldom rent land on which to make stockraising a prominent part of their business. They could well do so, but the prevalent custom is otherwise. Lands are rented for cultivation, in a majority of cases the rent to be paid by giving a portion of the crop, but renting for cash at an agreed price per acre is on the increase. This tends to obviate the difficulty of stockraising by tenant farming, and we believe the final solution will be in leasing farms to tenants for a term of years. This will enable the tenant farmers to make their plans as land owners may—to follow crop rotations, arrange for pastures and grow stock at their own will or pleasure. This we are sure is better for both landowner and tenant, and it will help greatly to solve the problem of increased increased stockraising.

THE HEIFER CALF

To talk about the scarcity of milch cows and the high price they bring seems like an old story, but it is a story that appeals strongly to the human family. It is inconvenient to say the least, to bring up a family without milk. The heifer calf, we wish there were many more of them, is the future milch cow, and how valuable a cow she will be depends upon her bringing up. A noted dairy authority once declared that he could take any healthy heifer cow born in his state and feed and develop her into a $300 cow. We doubt that, but whether or not the calf becomes a valuable cow no doubt depends very much upon her early feed and treatment.

This ought to appeal strongly to every reader of this paper who is raising a calf, especially a heifer calf. Even where calves are not taken from the cow and are allowed to share the mother's milk with the family, the calf's share is too often a meager allowance. But a calf can early be taught to eat—to lick bran or meal, and to eat shelled corn, or nibble at clover hay. This early teaching to eat is the making of the calf, provided it is supplied with a plenty as its appetite increases. On the farm it should have a rich pasture lot to run in.

That's how porous they are. That's how easy it is for air to circulate through them. And they absorb moisture like a blotter. It goes right through to the outer surface and quickly evaporates.
Ventiplex Pads
Keep the horse's shoulders and neck in good pulling condition. Prevent all sores, galls, etc., resulting from poor fitting collars. Ventiplex Pads are made of our patent Ventiplex fabric. It's soft, cool and comfortable on the horse and easily washed when soiled. Ask your dealer to show you the Ventiplex Pad. If he hasn't them in stock, write us.

UP TO DATE THE POULTRY YARD

POULTRY SUCCESS

ANY one who has sufficient ambition to undertake anything has also a desire to succeed. In poultry the selection of stock is a matter of the first importance. A flock of thoroughbreds is better than a flock of mongrels. The fowls being all one variety, alike in size, color, habits and characteristics, are prettier to look upon, and the owner can more easily meet their requirements. When his treatment of them is adapted to one it is adapted to all.

If eggs are to be the principal reliance for profits, one of the best laying breeds should be chosen, and pullets that are to become the layers for next season should be hatched early—during March or early in April. Then the chicks should have such care as to make them vigorous and rapid growers. As soon as the sex can be determined the pullets should be separated from the males and should have special treatment with a view to early maturity. Such pullets of the laying varieties should begin to lay quite early in the fall, and should be the very best winter layers. They are not the best, however, from which to get eggs for hatching next spring. Being young and having laid all winter their eggs will not produce as vigorous chicks as will the eggs from hens one or two years old, and that have not so persistently laid during the winter.

The housing is an important matter in success with poultry. Hens must be well fed, especially in winter, and they must have feed favorable to egg production rather than the production of fat. To this end they must have exercise in all kinds of weather—they must work for their feed. This makes necessary the dry scratching shed, a part of the housing too much neglected. It should have plenty of air, light and sunshine whenever the sun shines; and it should be constantly covered to the depth of two or three inches with dry litter—straw, leaves or chaff, or clover or millet hay. The grain feed for the hens should be given in this litter so that it must be scratched for every grain of it, and every day. The litter should be changed every few days.

TO DESTROY INJURIOUS LICE

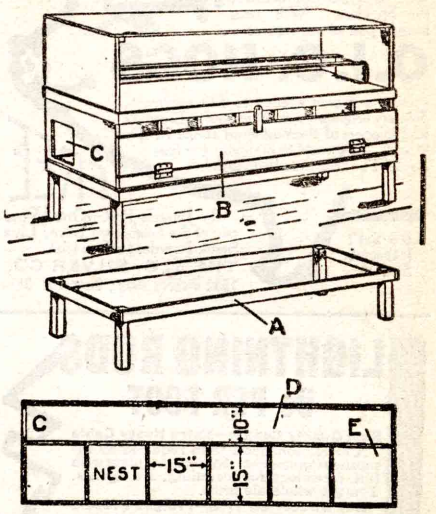
GREASE is recommended for lice, but chicks abhor it, and it should not be used unless it is absolutely necessary. Never use coal oil on young chicks, for it is irritating and likely to scald the flesh.
the flesh.

If the large lice are found on the chicks, sweet oil will answer the purpose just as well, and the chicks will not mind it as much. Ten drops of pennyroyal may be added to a large tablespoonful of olive oil. With the finger rub one or two drops well under the wings and down the head and neck of the chicks. The small lice may be got rid of easily, but the large gray ones stick very close and are hard to get off.

The large lice will kill the young chicks, and the owner never knows what the trouble is. They are hard to discern, and will suck blood from the little fellows until their vitality is exhausted, when they die. Watch the young chickens very closely, and do not allow them to be pestered with the large lice, nor the small ones, either, for they also will do a great deal of harm in many ways.

COMBINED ROOSTS AND NESTS

I THINK I have studied out and made a perfect combined nesting and roosting box. The nesting-boxes are of easy access, and at the same time so secret as to please the hens, and make them very secure from the hens learning that pernicious habit, so often learned in the winter, of eating their own eggs. The roosts are in a position to allow all possible access of fresh air without draft, and at the same time allow protection from a severe cold night. The third important advantage lies in the fact that it is made so much in sections as to be removed with ease. Every part is perfectly accessible, so to prevent and remove disease or lice. The foundation is a bench (A) 15 inches high, which allows the hens to use the floor space underneath, so that it is not wasted; 25 inches wide, and as long as desired, conforming to the space available and fowls to use it; remember, the nests (E) should be 15 inches square, so the length should be an equal multiple of



Combined Roosts and Nests.

15. The nest-boxes should have a door (B) to turn down in front, with

Uncle Sam's Poultry Book

A boy can ham-string the snout of a hog in a moment with a BELL-HART tool.

STOP THE ROOTING.

Once done, always done. Mr. Hog hasn't the power to lift the sod. Does not disfigure the finest show stock. Most humane of all known methods. Be the first to use the BELL-HART tool in your neighborhood.

Ask your dealer—if he does not carry it send us his name and $2.50 and we'll send you tool prepaid.

Write for Booklet which tells the interesting story about the discovery and advantages of the Bell-Hart Tool.

BELL-HART TOOL CO., Manufacturers,
Department 4. Palmyra, Illinois.

sufficient open space in cracks to allow the hen a little light, and yet dark enough to encourage them in hiding their eggs, and also to discourage the idle hens from hunting after the newly laid eggs. You will note the hens enter a nentrance (C) at back right (or left) hand corner and into an alley (D) that runs back of the nests (E) and opens into each. On top of the nest is a cleated cover of matched boards that carries an open-faced box without top or bottom, that sets on the cleated cover and in turn supports a cleated cover. In this open box is placed a roost made of two poles nailed to one-by-three-inch strips 24 inches long for supports. At the front edge of cover is fastened a piece of burlap, or strip of blanket, to turn down on very cold nights after the hens are at roost. Large fowls need a cleated board set slanting, in order to walk up to the roost. A small box should be set at the entrance of the nest boxes—Myron C. Safford.

NOT HARD TO RAISE TURKEYS

TURKEY poults are not especially hard to raise if they are from vigorous stock and are properly taken care of, says Mrs. C. R. Jones. Above all things else, don't overfeed them, see that they are kept free from lice, keep them from getting wet when small, and make them "rustle" for their living. To rid them of lice, should they become lousy, paint the bottom of a deep box with liquid lice killer and put the poults into it. Cover the top of the box with a cloth, but be very careful not to smother the birds. It it well to leave a part of the top uncovered, as the fumes of the lice killer are pretty strong. After they have been in the box for a short time, take them out and dust with some good lice powder. Eternal vigilance is the price of success in turkey culture.

POULTRY NOTES

A variety of feed will stimulate the hen to her greatest egg production.

Most chicken coops are too small and close and too inconvenient to clean.

Don't crowd the chickens in warm weather, and don't put those of different ages together.

Contrary to what we are often led to believe, turkey raising is not a business to take care of itself.

The houses must be kept clean and the hens must be free from lice if the best results are to be obtained.

Lack of moisture in the incubator is one of the common causes of chicks failing to break out of the shell.

Great size of an abdominal pouch in a goose indicates great age, a fact that is useful in purchasing breeding stock.

The beginner in poultry business usually has his hopes and expectations too high. This accounts for most of the failures.

The smaller the quarters the greater the care. Crowded fowls are much more liable to become affected with vermin and disease.

It is claimed that in laying an egg, the pullet parts with about one-sixtieth part, by weight, of the total solid nutriment of its own body.

The correct mating is eight to fifteen hens for each cockerel. The smaller the breed the more hens may be allowed to each rooster.

A broiler should be short in head; broad, deep and full in breast; small in comb (rose or pea); and a pound and a half to two pounds in weight.

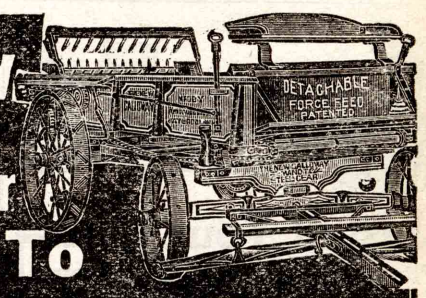
Before the breeding season begins the chickens should be carefully culled and graded. Only the strongest and most desirable should be saved.

For the benefit of the egg-sucking dog try soaking some eggs in a solution of lye strong enough so grains will form on the shell. Then leave them in Fido's way.

Lady Cornell, a single combed White Leghorn hen owned by the Cornell (N. Y.) Agricultural college, has an egg record that probably has not been excelled by any other hen. Lady Cornell weighs but 3.2 pounds; but, notwithstanding this, she laid 257 eggs during one year and the following year laid 200 eggs, making a total of 457 eggs for the two years, which weighed 57.19 pounds. Lady Cornell consumed about eighty-eight pounds of grain and mash to produce the above large egg output.

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING.

Here's My New 1913 Model Galloway Spreader That I Want To Ship To Your Farm FREE!



No payment down—no bank deposit—no lease, notes or mortgages—no red tape or obligations of any kind whatever. I'll ship you this new, 1913 Model Galloway **right to your farm for 30 or even 90 days trial absolutely free.** I'm going to make this spreader prove its worth to you without a word of argument on my part whatever. Here's the way I'll do it: I'll put the spreader on your farm for a 30 to 90 days trial **absolutely** free. I'll put it right straight up to you. Figure out a series of tests that would make scrap iron and kindling out of any other spreader made—**then try them on the Galloway.** Load it up as full as she'll hold with the toughest, tramped down or frozen slough hay manure. Let your team trot **and slam it in gear!** Do you think that there is one other manufacturer in the world that would dare to hint at such a test as that? **You know there isn't!** But if you can think of a severer test, go ahead. **I'll take all the risk and let you be the sole judge.** If you think you can possibly get along without the Galloway after you have had the free trial, just send it back to me. I'll pay the freight both ways—you won't be out one cent. If you want to keep it, I'll guarantee to save you $25 to $50.

Get My Big 1913 Proposition NOW!

Four years ago I started working on the **biggest, finest and most daring plan** I've ever offered. Now I've got it perfected. I can't explain it here—there isn't room. But if you'll write me at once I'll tell you how you may get one of my 1913 Model Spreaders *partly or entirely without its costing you one cent.* I won't ask you to do any work—any soliciting or any canvassing. It's the fairest, cleanest, most amazingly generous, co-operative plan that you or anybody else ever heard of. Write me and I'll tell you all about it.

My Regular $1 Book—"A Streak of Gold"—FREE

One of the most valuable books any farmer ever held in his hands! Explains fully, in plain language, how to make manure the greatest money crop on the farm, how to spread it, care for and use it. I'll send it free, also my 1913 Spreader Catalog and full details of my 1913 proposition. Send a letter or postal.

THE HOME ON THE FARM

A NEEDLESS TRIP

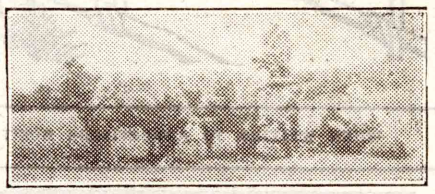
I do not have to go abroad
To learn about our money scheme;
The power that has it in control
Makes useless any other scheme.
So if we feel we need a change,
A fact it's little use to state,
The way to do is plain to me
As taught us all in UP-TO-DATE.

THE HOME AND ITS GROUNDS

THE sacred things about an old home are things some members of a family did to add to the beauties of the home. The family that did it may have served their years, and be out of the memory of those who live there now, but the things they did to make the home pretty are still there. We are now familiar with an old home that beautifully illustrates this. At the west side of the lawn each year grows and blooms a bunch of beautiful bluebells. Thirty years ago these bluebells were brought and planted there by some girls who then belonged to the home. Those girls long since went away to help make homes of their own, but their bluebells remain where they planted them, and each spring lend their beauties to the old home.

There are lilies blooming, too, that were planted years ago by hands that have ceased to plant flowers, and there are Easter flowers, and bridal wreaths, and roses. Every one of these was planted to make the home grounds more beautiful, and they are still performing their allotted tasks, with the additional attraction that they speak of those who have passed away, at least from that home.

Spring is here again. Kind reader, what have you in your mind to make the home more beautiful? A flower here, a shrub yonder, a vine at this particular spot, the lawn dressed up and made more attractive. So many things may be done, and almost every one of them will tell of you in after years. No place on earth should be prettier than the home on the farm.



DRINKING WATER

IN THE healthy person there is no obstruction to the natural working of every part of the complicated machinery of the body. If there is an obstruction anywhere the effect will be felt in some kind of an ailment. A constant change is taking place in the body tissues, the worn out tissues being swept away by the blood and carried to the channels whence they are removed from the system. There is danger that in the quiet of sleep these dead tissues may come faster than the slower flow of blood can take them away. An accumulation is the result and the blood becomes impure, loaded with bad and even poisonous material. It is said that a drink of good water on retiring at night is a great help in the carrying away of this foul matter, and thus prevents obstructions. Hot water is milder and speedier in its action than cold drinking water. Persons accustomed to a weak and languid feeling on getting up in the morning may be sure something of this kind is wrong, and that it is but the beginning of sickness, or bad health at least, and such persons should try the drink of water on going to bed.

OUR FRIENDS IN TOWN

We like the home on the farm where all is outdoor, and there ought to be room for everything. But many who live in town, especially in the smaller towns, could do much more for their own support and an independent living than they do. A lady who lives in Greenville, Ill., tells how they manage. From their little home lot, but a simple block from the public square, they fence with wire netting a plot twenty feet square. They have in this a small but warm chicken house that fronts to the south, and so arranged that it protects the little enclosure from the north wind. In this house and little lot they keep during the winter half a dozen hens. These hens are allowed on the lawn a little while every suitable day, on which they can always get something green. During last January five of these hens laid 105 eggs, or within three eggs of nine dozen. This supplied the family with eggs at the time when eggs were highest. In the spring it is the plan to sell these hens, and plant the ground to early vegetables, such as lettuce, onions and radishes. When these are gone tomato plants are set in their places, and pole beans are planted all around the fence. These beans run all over the fence and are very productive—useful as well as ornamental.

Yes, every war has its martyrs. And so has every home—martyrs who sacrifice themselves for the good of others—for husband and children. To war martyrs we build monuments; to home martyrs—well, we put flowers on their caskets and graves after they are dead.

"Little Wireless Phones"

For the ears that will cause you to

HEAR

What eye glasses are to failing sight, my invisible Ear Drums are to lost or failing hearing. Just as simple and common sense and on the same principle, for **they magnify sound as glasses magnify sight.** They are really tiny telephones of soft, sensitized material, safe and comfortable, which fit into the orifice of the ears and are invisible. They can be removed or inserted in a minute and worn for weeks at a time, for they are skillfully arranged for perfect ventilation and anti-friction. These little **wireless 'phones make it easy to hear every sound distinctly, just as correct eye glasses make it easy to read fine print.** Among the nearly 400,000 people whom they have enabled to hear perfectly, there has been every condition of deafness or defective hearing. No matter what the cause or how long standing the case, the testimonials sent me show marvelous results.

Common-Sense Ear Drums

have restored to me my own hearing—that's how I happened to discover the secret of their success in my own desperate endeavors to be relieved of my deafness after physicians had repeatedly failed.

It is certainly **worth your while to investigate.** Before you send any money just drop me a line. I want to send you **free of charge** my book on deafness and plenty of evidence to prove to you that I am entirely worthy of your confidence. Why not write me today?

2508, LADIES' KITCHEN APRON—For doing work about the kitchen an apron that completely protects the dress is necessary. Here is a design that is both practical and dainty. Gingham is the best material to use for aprons.

The apron, 2508, is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 4¾ yards of 27-inch or 4¼ yards of 36-inch material.

5784, LADIES' DRESS—This dress is just the thing for afternoon wear. It closes at the front and is made with a six-gored skirt.

Serge, cheviot or linen can be used to make this dress with the collar, cuffs and band around the skirt of allover lace or embroidery.

The pattern, 5784, is cut in sizes 32 to 42 inches bust measure. Medium size requires 6¼ yards of 36-inch material with 1⅝ yards of 22-inch allover.

5160, LADIES' APRON—This apron is made with a bib which protects the front of the dress.

Muslin or sateen can be used to make this apron.

The pattern, 5160, is cut in one size and requires 2 yards of 36-inch material.
The front closing of this sachmfwyp hr

4682, LADIES' DRESSING SACK—The front closing of this sack may be placed in the center or a little to the left. The tucks at the shoulders in front are short, but those in the back extend to the waistline and produce a pretty shaped panel. Two kinds of sleeves are provided and either preferred may be adopted.

Challis, cashmere, printed crepe and the like are all useful for these garments.

The pattern, 4682, is cut in sizes 32 to 42 inches bust measure. Medium size requires 2¾ yards of 36-inch material.

4480, BOYS' RUSSIAN DRESS—This frock hangs free from the shoulders and is made with standing band collar and long sleeves, which have three under box plaits. The closing is at the right side of the front.

For making the dress, linen, in white or colors, madras, pique, percales or repp can be used.

The pattern, 4480, is cut in sizes 1 and 2 years. To make the dress in the medium size will require 2 yards of 27-inch, 1⅜ yards of 36-inch or 1½ yards of 44-inch material.

5848, LADIES' SHIRT WAIST—This shirt waist is made in simulated sailor fashion with an attractive collar and a handkerchief pocket, and has the new style set in sleeves.

Silk, pongee, or madras can be used to make this waist, with the collar and cuffs of contrasting goods.

The pattern, 5848, is cut in sizes 32 to 42 inches bust measure. Medium size requires 2⅛ yards of 36-inch material and ½ yard of 27-inch contrasting goods.

4949, GIRLS' DRESS—This clever little garment has shoulder plaits stitched to the belt back and front which give becoming width to the figure. The garment closes at the front and is made with kilted skirt, deep sailor collar and short sleeves. Contrasting goods is used to trim the frock.

The pattern, 4949, is cut in sizes 4 to 12 years. Medium size requires 3½ yards of 36-inch material and ¾ of a yard of 27-inch contrasting goods.

These patterns are guaranteed; there are none better at any price. Full directions accompany each. All you have to do is to give number and the size you want and write your name and address plainly. Address Pattern Desk,

"RUBY GORDON Or Back From The Grave" FREE

By Libbie Sprague Phillips.

Here is a thrilling story of love, mystery and adventure that will grip your attention from the first word to the last! It is one of the greatest novels this famous writer has ever produced. Ruby Gordon, a poor orphan girl, becomes engaged to one of the young men in the town, who is the adopted son of a wealthy recluse. The old gentleman took a great dislike to Ruby Gordon because she reminded him of his wife who had left him years before and had been lost at sea in crossing the ocean; he felt that she was his wife's spirit reincarnated, and forbade Lawrence, his adopted son, to marry her, and made so much trouble that the young man finally broke his engagement and married another, but it is not their fate to so easily evade Ruby Gordon, as you will discover when you get your free copy of this great book and read the story yourself! Ruby Gordon will surely find a warm place in your heart—she is one of those sweet pure characters every reader admires. We purchased a large edition and will send the book free and postpaid to all who send 10c to pay for a 3 months' subscription to our big farm and home magazine. Send today. Address

Valley Farmer, Book Dept. RG-15, Topeka, Kan.

Cadets *of* Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THE middle of March. The farmers are getting busy now in almost all parts of this great country. In many places where our paper goes the crops are planted and are up; in others preparation for planting has hardly yet begun. We wish all a successful crop season, and prices for their surplus that will properly reward them for their labor.

DEAR CADETS: I am 16 years old, and my father owns a farm of 75 acres in West Virginia. This state was formed from Virginia in 1863. It was a portion of virginia that refused the ordinance of secession, and became an independent state. It has 55 counties, and its largest city is Wheeling. We have six normal schools. I live in Ritchie county, the county seat of which is Harrisville. The principal crops are corn, wheat, oats, potatoes and apples. I would like to receive cards and letters from all the Cadets; will answer all.—Clara Prunty, Burnt House, W. Va.

DEAR CADETS: I am 10 years old, and live 4 miles from Crystal Valley, 8 miles from Pentwater, and 10 miles from Hart, the county seat. I live on a farm of 240 acres. Our general crops are wheat, corn, rye, oats and red kidney beans, and we have 6 acres of fruit trees—peaches, apples, cherries and plums. We also have 200 grapevines. We have 9 cows, 5 horses and a team of mules. I will be glad to hear from the Cadet girls and boys, and will answer all I receive.—Roena Bender, Pentwater, Mich.

DEAR CADETS: Though I live in the city I enjoy reading UP-TO-DATE FARMING. My sister subscribes for it, and we all love it, especially the Cadet page, which is very attractive in our house. I think it would be grand to have the photos of the Cadets in UP-TO-DATE. I don't know any of the Cadets, but I feel like I know them all. I am 15 years old, and go to St. Augustine's Catholic school. Would be more than pleased to exchange letters and post cards with the Cadets.—Wilhelmina O'Connell, 944 East Court avenue, Jeffersonville, Ind.

DEAR CADETS: I am a farm boy of 18. I do not take UP-TO-DATE, but my uncle takes it, and I get to read it. We think it a fine paper. We live a mile from no place. Our crops are corn, oats, wheat, buckwheat and rye. We also have potatoes, turnips and apples. I like farm life very much—pure air and outdoor sports. I was in the city of Chicago last summer; I don't think I would like to live in the city. I would like to hear from the girls and boys, and will answer all I receive.—Harry De Berry, Cuzzart, W. Va.

DEAR CADETS: Here comes a young Frenchman from Ohio. I am not lucky enough to be a farmer boy, but you had better guess I like to read UP-TO-DATE. I am an apprentice machinist, and just 19 years old. Well, as Obadiah, my big parrot, is yelling "Quit it!" I suppose I'll have to. I would like to have every one of the Cadet boys and girls to write to me, and I sure will answer all.—Minor P. Griffith, 1027 Holmes avenue, Lima, Ohio.

DEAR CADETS: I am a railroader's daughter, but I like to read UP-TO-DATE. My brother and father take the paper. We live at a very small station, and have neither school nor church, but myself and two brothers walk about 2 miles to the next station, also a small place, but they have two churches—Methodist and Baptist—and a small school. Our crops are corn, cotton, potatoes, peanuts and sugar cane. I would love to receive letters and post cards from the Cadet boys and girls.—Lula Arnold, Myles, Miss.

DEAR CADETS: I am a girl of 15, not a farmer's daughter, but it would be my greatest delight if I were. It must be very delightful to live in the country. My father takes UP-TO-DATE, and I like to read the letters from the boys and girls. I would be to glad to receive letters or cards from them, and will answer all I receive. —Clara Rodgers, Rock Hill, South Carolina.

DEAR CADETS: I guess I can write now, for I was 21 yesterday, but pa and the children are agrifretting me so I reckon I can't say much. I live on a farm of 125 acres out here in the hills of Kentucky. The principal crops here are mining and coal digging, but our work is mainly raising corn, hay and tobacco. We also have coffee when the hens lay enough, but when they don't we drink water and cow juice. Come on, boys and girls, with your letters and cards, and I will answer all I get.—Ervin Sayler, Kerr, Ky.

DEAR CADETS: I am very much interested in your letters; it is always the first page I turn to. I am a farmer's daughter, aged 16 years. We own a farm of 600 acres, but papa says he won't hire any hands next season. I am not going to school this winter, but I am taking piano lessons. Papa made me a present of a fine piano last summer, and I appreciate it very much. One of my brothers is learning to play the violin. I enjoy farm life very much, and would not trade places with any city girl. A farmhouse not far from us caught fire one night last week, and burnt five people to death—Mr. and Mrs. Major Harris, their two little sons and his aged mother. I would like to exchange letters and cards with all the Cadet boys and girls; will answer all I receive.—Edna M. Harris, Richland, Iowa.

DEAR CADETS: I live away out here in Western Texas in a little town called Graford. We used to farm, but now we have bought us a home in town. I would rather live in town than in the country. I am 20 years of age, and would like to have a shower of post cards and letters from the Cadet girls and boys. I will answer all.—Katie L. Clarkson, Graford, Texas.

DEAR CADETS: I have always lived on the farm, but I go to town sometimes to visit my grandparents. I am 15 years of age, and have a twin brother whose name is Earl. Our crops are chiefly corn and wheat. I would like to exchange postals, photos and letters with the Cadet boys and girls.—Pearl Carpenter, Agra, Kans.

DEAR CADETS: I am a farmer's daughter, 17 years of age. We do not live on our farm, but in a home a short distance from it. At present I am attending the Muskegon Commercial College, in which I am taking a course in bookkeeping and other minor studies. Later I will take a course in stenography. I shall be glad to hear from any of the Cadets, and will try to answer all postals or letters I receive.—Ethel Poland, Muskegon, Mich.

DEAR CADETS: I am not quite 17, but I am 5 feet 8 inches in height. I am youngest of a family of 8. Three sisters and one brother are married, one sister is going to the state normal school, and two brothers have gone to the Great Beyond. One was killed in the coal mines, and the other was a soldier and died in the Philippine Islands. I think UP-TO-DATE a great paper. Our chief crops are wheat, corn and oats. I am a lover of animals, flowers, music, reading, and all kinds of sport. I will answer all cards or letters received.—Clare Sayers, New Bethlehem, Pennsylvania.

DEAR CADETS: My daddy has a 40-acre farm, and we only farm on a small scale. Our crops are potatoes, grain, hay and garden vegetables. We have a few fruit trees. I wish all of you could live here; it is just dandy. We live only a short distance from the Columbia river, the great river of the West, where we could go bathing, but, of course, we would have to wait for summer for that. The scenery along the river is beautiful, some of our specialties being the sand dunes, Cape Horn, Rooster Rock, Multnoma Falls, Oneonta Gorge and the Needles, or Pillars of Hercules, as they are sometimes called. We live just 25 miles from Portland, Oregon's largest city. I was there until I had pneumonia, and now I am home to get my strength back again. But I intend to be a farmer some day. I have an 80-acre farm of my own, but it is in a sagebrush country and must be irrigated before I can farm it. I will be 18 my next birthday. You older girls, tell me how it feels to be your own boss. I have no ambition in that direction, but I do hate to grow old. If any of the Cadet girls or boys come to Oregon, I hope they will visit me here on Cotton Wood Farm. Anyhow, write me a letter or a card, for I shall be glad to correspond with the Cadet boys and girls.—Alice Woodward, Corbett, Oregon.

DEAR CADETS: I am a farmer girl, 15 years of age, and live on a farm of 100 acres. My father has been taking UP-TO-DATE FARMING for five years, and he likes it fine. I would never be without it if I could help it. I will be glad to exchange cards or letters with the Cadet boys and girls, and will answer all I get.—Ernest Bazell, Mayfield, Ky.

DEAR CADETS: The farms, or ranches as they are called here, differ greatly from those of the East, both in products and size. Our products are fruit, potatoes, alfalfa and small vegetables, and there are some cattle and sheep. Most all places are irrigated except a few in the valleys away from the river. I am 19, and would be glad to hear from the girls and boys; will answer all I get, and will exchange photos also. Can tell you a great deal about the cliff dwellers and Aztec Indians, whose ruins are still standing.—Percy Van Woods, Cedar Hill, New Mexico.

DEAR CADETS: Reading your letters is good for the blues; I always look them over the first thing. UP-TO-DATE FARMING is a great paper; it is so full of good advice for the farmer. I am a bachelor,

I Say to You MONEY TALKS

I will show you how to make $10 to $15 every day during your spare time.

I will put you in the tailoring business—make you independent—my actual business partner in your town. You share the profits.

to men with rig to introduce poultry compound. Year's contract.

IMPERIAL MFG. CO., Dept. 67, Parsons, Kans.

30 years old, and live 57 miles from the nearest railroad point, and 15 miles from town. This part of the country has settled up considerably during the last two years. Our crops of all kinds were good last year. My principal crop is colts, and they are not much trouble to store or market. I let them run free on Uncle Sam's land till they are old enough for the government or farmers to buy them for use. A good part of the prairie land where I used to punch cows or herd sheep is plowed now, and more farmers are coming all the time. Most of them get the same idea—early to bed and early to rise; work all day and organize. The evenings are long, and I've got lots of time to exchange letters and cards.—Fred Speiser, Ekalaka, Montana.

DEAR CADETS. Here comes a girl from good old New England. I am 15 years old, and live on a farm of 60 acres, where I have kept house for 5 of us for two and a half years, ever since my mother was called to the Better Land. We have taken UP-TO-DATE FARMING quite a while, and think it an excellent paper. We all enjoy reading the Cadet pages. I would like to receive letters and cards from the Cadet boys and Girls, especially those in the far South and West. I promise to answer all I receive.—Bessie Bishop, Whittingham, Vermont.

DEAR CADETS: I live on a farm near the little city of Clark's Mills, and have been a reader of UP-TO-DATE for nearly a year. I surely would like to hear from all the boys and girls in the Union, and will answer all letters or cards I receive if I have to hire a secretary to help me. —Leverna Stamp, Clark's Mills, Pa.

DEAR CADETS: I am a boy of 16. My father is a farmer in a small way. Our chief occupation is drilling for coal. We own a farm of 49 acres, but I like drilling better than farming. I want to exchange letters with the boys and girls. I will answer all I receive.—Ernest Loveall, Carbon, Ind.

These boys and girls want to exchange cards and letters, too:

HOME AMUSEMENTS

The home life should never be a dull life. Aside from the family reading of books, papers and stories, there are many attractive amusements which may be made to pleasantly and profitably fill what might otherwise be dull hours. These little home amusements appeal strongly to the children, and if directed by the parents they are given all the more zest. Otherwise the older children may direct them, and visiting young people may be invited to participate in them. Our own memory goes back to many pleasant minutes thus spent in the old home.

Where to Find It

Sweetheart—What did papa say when you asked him for my hand?

Lover—He said if I wanted to be sure to get it I'd better look for it in his pocket, for it was there most of the time.

TRAPPERS LOOK HERE, did you ever see a fairer proposition; ship me your furs, put your own valuation on them and if I can not pay that much or more, I will return furs and pay all express both ways, or you can ship to me and just say, "hold separate," and I will submit my best offer, and if not satisfactory will return, as above stated. Write today for price list and tags, which are now ready and free for the asking; a postal card will do.

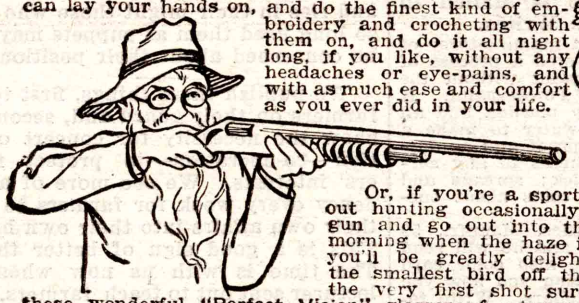
JONAS D. EMERY Concordia, Kas.

Glasses Absolutely Free

Don't Send Me One Cent

when you answer this announcement, as I am going to mail you a brand new pair of my wonderful **"Perfect Vision"** glasses (known in the spectacle business as "lenses") absolutely free of charge as an advertisement.

As soon as you get them I want you to put them on your eyes, sit down in front of the open hearth one of these cold wintry nights, and you'll be agreeably surprised to discover that you can again read the very finest print in your bible with them on even by the dim firelight; you'll find that you can again thread the smallest-eyed needle you can lay your hands on, and do the finest kind of embroidery and crocheting with them on, and do it all night long, if you like, without any headaches or eye-pains, and with as much ease and comfort as you ever did in your life.



Or, if you're a sportsman and like to go out hunting occasionally, just shoulder your gun and go out into the woods some early morning when the haze is yet in the air, and you'll be greatly delighted when you drop the smallest bird off the tallest tree-top at the very first shot sure, with the help of these wonderful **"Perfect Vision"** glasses of mine. And in the evening, when the shadows are gathering in the twilight, you'll easily distinguish a horse from a cow out in the pasture at the greatest distance and as far as your eye can reach with them on—and this even if your eyes are so very weak now that you cannot even read the largest headlines in this paper.

Now Don't Take My Word For It

but send for a pair at once and try them out yourself for reading, sewing, hunting, driving, indoors, outdoors, anywhere and everywhere, anyway and everyway. Then after a thorough tryout, if you find that every word I have said about them is as honest and as true as gospel, and if they really have restored to you the absolute perfect eyesight of your early youth, you can keep them forever without one cent of pay, and

Just Do Me A Good Turn

by showing them around to your friends and neighbors, and speak a good word for them whenever you have the chance. Won't you help me introduce my wonderful **"Perfect Vision"** glasses in your locality on this easy, simple condition?

If you are a genuine, bona-fide spectacle-wearer (no children need apply) and want to do me this favor, write your name, address and age on the below four-dollar coupon at once, and this will entitle you to a pair of my famous **"Perfect Vision"** glasses absolutely free of charge as an advertisement.

Write your name, address and age on the below coupon at once.

$4 $4

DR. HAUX—The Spectacle Man—ST. LOUIS, MO.
I herewith enclose this four-dollar coupon, which you agreed in the above advertisement to accept in full and complete payment of a brand new pair of your famous **"Perfect Vision"** glasses, and I am certainly going to make you stick to that contract.

My age is.....

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package Is Mailed to Everyone Whote Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of dry powder, and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood stone, or brick; spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufr., 59 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

"That roof is not going to cost as much as I thought"

Certain-teed

Quality Certified Durability Guaranteed

Roofing in Rolls and Shingles

The users of this modern, easy-to-lay Certain-teed Roofing are saving thousands of dollars—on every roll and crate of shingles is a Certain-teed label of Quality—a 15-year guarantee of Durability.

Get Our New Book

"Modern Building Ideas and Plans"—It would ordinarily sell for $1—but as it illustrates the use of our Certain-teed Roofing on all kinds model city, factory, and farm buildings, we offer it to you at 25c. We prefer to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy Free. If you write us, enclose 25c to cover cost, postage and mailing.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

"On the farm I find production a genuine pleasure, but selling involves many disappointments. Your position is right. The greatest need of farmers today is a just marketing system to guarantee them adequate returns for their labor. With equitable, steady prices farmers can and will solve most things agricultural. Give them only this, and they will solve most rural problems, but without this farmers in our country will eventually become but little better than the peons of Mexico and the serfs of Russia. In the present state of social unrest there must be a more general realization of the true cause of backwardness in farming. *And the time is more auspicious now than ever before for successful organization of the agricultural class for better marketing.*"

—o—

Above was copied from a letter from an Ohio farmer, who is also a writer of much note on agricultural topics for farm papers. We have often said the same things, in different language, but we are glad to add to all that we can say, and to our urging to complete the organization for marketing, the advice of others fully as competent to give it.

—o—

In a recent number we told how the farmers of Kansas turned their backs on the exclusive-production teachers and preachers and called a meeting to consider the matter of marketing. Now we learn that three hundred Kansas farmers went to the capitol and demanded of the legislature the abolishment of the agricultural extension department of the State Agricultural College. That department has been for extension of crops only, and chiefly in the interest of handlers and storers, and not for the increase or extension of farmers' profits. Truly the farmers of Kansas are awakening and when they are thoroughly awakened and rise in their might those who have so long used them as puppets may well be concerned about their positions.

—o—

We publish these things, first to put farmers on their guard and, second, to show the necessity for concert of action—co-operation—to protect farmers' interests. We see more of a tendency every week for farmers to take their own affairs into their own hands. This is a good sign of better things. The time is with us now when the lecturer sent out to teach farmers, who has only one theme and that "greater production," will have scant consideration. This is plainly shown by this report copied from the Farm -Co-Operator:

—o—

Actual farmers were scarce at the meeting of the Texas Farm Life Commission held in Fort Worth last week. There is no particular cause for regret at such a condition, for most actual farmers have other problems than those concerning farm life commissions.

Discussion of rural credits was a feature of the Fort Worth meeting and most farmers hear these subjects discussed amply. They know the views of their local bankers and merchants on rural credits down to a gnat's heel, and it is the views of these men and not the views of any farm life commission which the farmers are up against.

The personnel of the farm life commission includes some very excellent gentlemen. If associating in commission meetings will enable these gentlemen to get a more intimate view of actual farm conditions in Texas; the tremendous increase in landlordism; the terrific burden of chattel mortgages; the growing load of bond issues which are plastering nearly every county in Texas, a load which farmers and their children will have to carry, then the farm life commission will do these gentlemen good.

—o—

It is not a multiplicity of institutions and efforts, outside of agriculture, to help farmers that is needed, but a practical plan of organization and co-operation in agriculture itself and of farmers themselves. We want farmers to believe that they have enough intelligence among themselves to handle their own affairs if they just once settle on the right plan to do it. And to bring a practical plan to them we are now printing in this paper a series of articles: "The Problem of Marketing Farm Crops." We commend it to every reader. It began in March first number and will be completed in the issue of April 15th.

—o—

Farmers must realize that they must not look to agricultural colleges, bankers, crop-improvement associations, chambers of commerce, manufacturers, mail order houses, farm demonstration movements, the national department of agriculture, state legislatures or the government at Washington to have their marketing problems solved, but whatever they want they must go after it with their combined power and they will get it. "He who would be free himself must strike the blow."

—o—

Farmers must organize the right way first before they can exert their combined power, and they must put co-operation in operation before it will do them any good.

—o—

This calls to mind that Mr. A. B. Cleaver of Boone County, Indiana, a member, was at headquarters recently and he said: "We have a county union, but how are we to use it?" This is a point that headquarters has probably not made clear enough, because a like question comes from Idaho. Mr. Robert Haxby, county secretary, Burley, Idaho, wrote: "We have Cassia county thoroughly organized and we now want some instructions on county union work."

—o—

The Farmers Society of Equity is, above all else, a business organization. Every farmer should remember this. If he is a farmer who has no business of selling or buying he could very properly decline to join the Society. But if he is ever disappointed over his marketing, or is ever dissatisfied with arbitrary prices forced on him when buying, then the F. S. E. can supply a long-felt want.

—o—

But no machine will do its best work until given a skilled operator. We mean that a county organization of the Farmers Society of Equity will not work automatically. "Co-operation must be put into operation."

—o—

So, given the county organization, or the county union, it must be put to work. And what are its functions? From the literature of the Society any member can learn that it is to market the crops of the county as county units and buy supplies for the farmers of the county (members of the F. S. E.) in county units.

—o—

We want to make this clear: Before organization each farmer, and we will say there are 1,000 in the county, sold independently. This meant that there were thousands of transactions of selling and it made necessary a number of buyers at each town to whom the farmers would apply and learn the prices and terms they would offer. In the evolution from this primitive condition the farmers in each community organized their local union as the first step. This was done for the purposes of marketing and buying as a local unit. Assuming that the membership of the local union is 100, 99 selling transactions and many of the buying transactions are eliminated at once.

And when the county is organized the unit of transaction is a county

Law Should Stop Sale of Leg-Strap and Spring Trusses

Wrong to Buy Anything for Rupture Without Getting 60 Days Trial

Depending on leg-strag or spring trusses—like shown below—is little less than slow suicide. They are almost sure to shorten your life. It's next to impossible to make them hold without hurting—they are simply a curse to wear.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

one. A county that is thoroughly organized, as Mr. Haxby reported is the case with his county, then, instead of there being about 1,000 individuals selling crops, or three to ten or more local unions selling, the selling is all done through the county union.

This accomplishes to a very great degree what every farmers' organization is ostensibly working for, viz., elimination of waste effort, concentration and co-operation.

—o—

But what must be done to start the county machine? ENGAGE A HIGH-GRADE BUSINESS MAN AS THE COUNTY BUSINESS AGENT AND TURN HIM LOOSE. The county business manager is not hired for a stated time or for a definite salary, but he is allowed a commission on sales and purchases and retained only while he gives satisfaction. By this plan if he does not do business the members will not pay him, and if he does not do business he will earn nothing. It is a safe transactions as far as the members are concerned.

—o—

The possibilities are great enough to be attractive to the best business man in the county. For instance, the members in an average organized county should have $1,000,000 worth of produce to dispose of in a year. If this is all sold through the county union, and if 5 per cent is charged for doing the business the commission is $50,000. If 2 per cent is allowed the business agent and his assistants, which is the usual allowance, it equals $10,000. One per cent usually goes into the county union's treasury and 2 per cent to the local union that furnished the stuff, to pay the local business agent or secretary and to meet the expenses of the local.

—o—

The vital part of the whole matter is to select the right county business agent, and for the members to agree to abide by the rules of the F. S. E., which they joined for business. The county business agent will then be the chief pactor in maintaining the organization and making it profitable to the members because on that depends his own success and prosperity.

—o—

Need more be said? Farmers have not been business men in the past because they had no business plan or system. As a penalty for this they have been letting a lot of self-appointed

THIS IS ONE OF THE ARGUMENTS WHY SOME PEOPLE DON'T WANT FARMERS TO ADOPT A BUSINESS SYSTEM

business men do their business for them who have been charging about $7.00 for marketing $6.00 worth of produce. This is what a government department reported. Don't let this condition continue another year, but send the blank on page 18 and prepare to end it at once.

—o—

We want every reader to feel this way about this matter: "We've got to improve our marketing some time so why not now and get the benefits this year?"

—o—

If you have not sent the blank before send it now and we'll help you to perfect an organization that the average farmer will stick to because it will make him money to stick.

—o—

Will you take the lead to organize a local union? The Society will pay for it.

—o—

If you will not take the lead who will?

—o—

It is necessary that we have the co-operation of a local man.

—o—

With this explanation of the case, and the illustrations of how watchfulness and the ability to exert combined power protects farmers is not every reader impressed with the importance, yes, the necessity of a local union at his place, to be followed by a county union?

—o—

The F. S. E. plan is right, but we will say to the parties who asked the questions and all others: The vital thing is a live-wire secretary or business agent for the local and county unions. The average member will not put co-operation in operation if he has not the live-wire business agent to call on him, personally or by phone, to learn what he has to sell and what he wants to buy.

—o—

Send the blank.

— — — — — — — — THIS IS THE BLANK — — — — — — — —

Yours Is the Work That Counts

YOUR season's work means a great deal to you. After you have fertilized your soil, plowed, harrowed and perhaps rolled it, planted your seed in the carefully prepared seed bed, tended the growing crops and watched the grain ripen, you have a right to a full harvest. You can be sure of a 100 per cent return from your fields when you use efficient modern machines for your farm work. You would certainly be taking an unwise and unnecessary chance if you bought a machine that might not do your work as it should be done. To be on the safe side, buy I H C harvesting and haying machines and tools, all of which have proved their reliability through years of experience with harvesting and haying conditions on farms in every part of this country. These dependable machines may be identified by the following well-known names:

Champion Deering
McCormick Milwaukee
Osborne Plano

There is no better time than the present to investigate and decide which machine is the best for you to buy. The opinion of your neighbors is valuable, and should help you to come to the right decision. All of the machines are so simple that they may be handled by ordinary farm help. They are so efficient that there is no question of their capacity for cutting, binding, and saving all the grain in any field, whether it be heavy or light, tall or short, standing, down, or tangled. The haying machines are as efficient as the harvesting machines. When you buy an I H C machine you do away with any chance for unreasonable delay at harvest time. Should anything happen to your machine, it is possible, no matter where you may be, for you to obtain repairs in a few hours' time. Our efficient organization, which includes nearly a hundred general agencies carrying complete stocks of repairs, and over thirty thousand local dealers who carry repairs for the machines they handle, is the most practical guarantee you can have that your grain will be cut and bound at the proper time, and without delay and annoyance.

To secure the best results from these good machines, it is necessary to use a strong, smooth binder twine of reliable quality. I H C binder twine is made under seven brand names—Champion, Deering, McCormick, Milwaukee, Osborne, Plano, International, each in four grades—pure manila, manila, sisal, and standard. Each ball of twine marked with any of these names is guaranteed for length, strength and uniformity of size and quality.

Yours is the work that counts. Make sure that it is done as it should be done by seeing the I H C local dealer and buying from him the I H C harvesting and haying machines, tools, and binder twine that you will need for this harvest. He will supply you with catalogues and full information, or, write

The Traveler

Under this head appears accounts of what our "Traveler" sees, hears and otherwise discovers. He can not, unfortunately, visit every section and locality, and those whom he can not see he most earnestly desires to hear from occasionally. This applies to every reader of this paper who is interested in the plans of the Farmers Society of Equity. Write to "The Traveler." Write today and address your correspondence to

"THE TRAVELER'S DESK"
CARE THE FARMERS SOCIETY OF EQUITY
INDIANAPOLIS, IND.

EVERY organizer, local union officer and member, and every person who takes this paper should read every word of this department. It tells what the greatest farmers' organization ever instituted is doing, and how it is doing it. A local union of the Farmers Society of Equity is as necessary and beneficial in a community as the schoolhouse, the church or the postoffice. You could exist without them, but existence without any one of them is not half what it could be and ought to be.

—::—

Farmers, you must get together more. Meet every week in the dull season, and every two weeks all the time. Keep in touch with each other, as well as the rest of the world.

—::—

A good rule for local union program is to take one hour for regular order of business, half an hour for a social recess, then an hour of discussion on some important topic of production or marketing.

—::—

Once a month hold an Equity picnic or social for everybody in the neighborhood.

—::—

Have you reported yet on the Special Report Blank sent with the March Bulletin?

—::—

Remember, now, that April is a dues-paying date for a number of locals. Look over your records now, and see how many members you have whose annual dues are payable.

—::—

Every local union ought to make a study of economical production. Go about it in a business-like way. Read up on cutting down costs of production in books, bulletins and agricultural papers. Compare notes with each other. Give your experiences and discuss how to cut down the cost. Deal with facts and figures. Every local union should be a business school, and it is up to the members to make it one.

—::—

Don't forget that the progress of the Society each year is measured by the attendance and enthusiasm of the annual meeting of the National Union. Are you preparing to send a delegate this year? It is not too early to consider the matter. Give a few ice cream festivals during the summer to help meet expenses, if necessary.

—::—

Very frequently I run across a bunch of loyal, enthusiastic fellows who are so deeply in earnest in getting the new marketing system to working better yet that they lay awake nights (so they positively declare) to study out plans to boost the thing along. Now, it warms the cockles of the heart to rub elbows with some real men who will not merely wait until somebody else figures a way out of their difficulties, but who put their own brains into the game and do some figuring for themselves. When more of us get the think habit, and take a little mental exercise now and then, there won't be so many problems to figure out.

—::—

A number of our folks want to see more business done between members and locals. Those Idaho boys who have been buying their seed potatoes from a local dealer, who bought from a wholesale house, who bought from a commission

Have a Home of Your Own

A GENUINE RUPTURE CURE
Sent On Trial To Prove It
Don't Wear a Truss any Longer

After Thirty Years' Experience I have Produced An Appliance for Men, Women and Children That Actually Cures Rupture.

If you have tried most everything else, come to me. Where others fail I have my greatest success. Send attached coupon today and I will send you free my illustrated book on rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and, once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try my Appliance or not.

PENNSYLVANIA MAN THANKFUL

Mr. C. E. Brooks, Marshall, Mich.
Dear Sir: Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug, and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of my body and seemed to be a part of the body, as it clung to the spot, no matter what position I was in.

It would be a veritable God-send to the unfortunate who suffer from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My rupture is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers. I am,

Yours very sincerely,
JAMES A. BRITTON,
80 Spring Street, Bethlehem, Pa.

RECOMMENDATION FROM TEXAS FARMER

Brooks Rupture Appliance Co.,
Marshall, Mich.
Gentlemen: I feel it my duty to let you, and also all people afflicted as I was, know what your Appliance has done for me. I have been ruptured for many years and have worn many different trusses, but never got any relief until I got your Appliance. I put it on last November, but had very little faith in it, but must say I am now cured. I have laid it away—have had it off for two weeks and doing all kinds of farm work with ease. While I was wearing it, I had la grippe and coughed a great deal, but it held all right. Words cannot express my gratitude towards you and your Appliance. Will recommend it to all ruptured people. Yours sincerely,
Bald Prairie, Texas. J. E. LONG.

The above is C. E. Brooks, inventor of the Appliance, who cured himself and who has been curing others for over 30 years. If ruptured, write him today.

OTHERS FAILED BUT THE APPLIANCE CURED

C. E. Brooks, Marshall, Mich.
Dear Sir: Your Appliance did all you claimed for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him in three months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you.
Yours respectfully,
WILLIAM PATTERSON,
No. 717 South Main Street, Akron, Ohio.

CURED AT THE AGE OF 76

Mr. C. E. Brooks, Marshall, Mich.
Dear Sir: I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable. Very sincerley yours,
Jamestown, N. C. SAM A. HOOVER.
21 Jansen St., Dubuque, Ia.

CHILD CURED IN FOUR MONTHS

Brooks Rupture Appliance Co.
Gentlemen: The baby's rupture is altogether cured, thanks to your appliance, and we are so thankful to you. If we could only have known it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks.
Yours very truly,
ANDREW EGGENBERGER.

TEN REASONS WHY

You Should Send for Brooks Rupture Appliance

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture cannot be thrown out of position.
3. Being an air cushion of soft rubber it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable, and positively can not be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing a harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the material of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending for free coupon today.

REMEMBER

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out the coupon below and mail today.

City .....

firm, who bought from some of our North Dakota or Minnesota boys, who grew the crop, would like to send their money straight to the growers and get their seed straight back, and that is, of course, the sensible thing to do. It is the way the business will be done in the future, too. But there are a few little business matters to learn first, in order to make the new plan properly satisfactory to both buyers and sellers. One is to make arrangements ahead. Don't wait until you are ready for the seed before you start out to hunt what you want. Be forehanded, and then planting time will find you ready. And those who sell must learn to sell right, and the right kind of goods. Take a pride in shipping A-1 stuff. It is the only kind that is profitable, in the long run. Get the principles of successful business in *your* business. It is the only road to prosperity.

—::—

It has been suggested that our official paper be made a medium in which to catalog the wants, goods, etc., of our members. Why, bless you, boys, while that looks like an open door to opportunity to you, it is an unclimbable cliff. In the first place, there's no use starting a scheme that can't be carried out; and how big do you think UP-TO-DATE FARMING would have to be made to list all the wants and all the crops of all the members? It's just impossible. Another thing: You boys are just a bit slow sometimes, and don't ask for what you want until right at the time you want it. And it would take too much time to depend on a notice in the paper to find it for you. In the first place, you would have to send in your request at least two weeks before the paper is issued. Then it will take another week for the paper to get to all subscribers. Then another week to get in touch with the right party. Then you'll want to "dicker," and by that time it may be too late. We don't want to have to depend on so unsatisfactory a system as that would be sure to be. We must get our system right up to the minute, and it can't be done that way, so that is not the way to do it. The right way is to use your county, state and national union headquarters as clearing houses. Put on record what you will have for sale, and what you will need to buy, and when, in the offices of your clearing house, and then you can get in touch with the right party at the right time, and do business as fast as Uncle Sam's service can carry the mail. That is the plan to work on, but you men must do your part, and do it in time.

Organizers

THE Farmers Society of Equity wants an organizer in each community. A local union must be organized at each market town and city or shipping station. We have an exceptionally good proposition for the right person. The right person is any man who stands well among his neighbors and wants a better marketing system established, Hundreds of organizers who succeed locally will be given a larger field. If you want to employ part, or all of your time profitably, write for our terms.

A post card or letter will bring full particulars by return mail. Don't delay. Every field should be occupied.

The Problem of Marketing Crops

(Continued from Page Seven)

Wherever the social features are undertaken to be carried out it will be prized and enjoyed by all the members of the farmers' families. Local unions of the Farmers Society of Equity are organized in the market towns, cities or shipping stations and not at school houses. This is because the Society is a business organization. Therefore it must be established where the business of marketing is to be done.

The Second Step

A county union is the second step in the Farmers Society of Equity national marketing system. It is necessary to bring the reports of crops of the members of the local unions, into a county unit for reporting to the National Union or clearing house. Also the County Union is necessary in the plan of sending back shipping instructions as will appear further along as we describe the plan. Also, the county union can serve a good purpose in buying supplies for the members of the Society in the county. For instance, many things can be bought as a county unit to better advantage than the local unions, the great quantity securing the lowest prices. As soon as there are three or more local unions in a county, they can meet by representatives at the county seat, or another place, central, and organize a county union. Full instructions are given in the Constitution and By-Laws.

The Third Step

At the head of all is the National Union and the national clearing house where the reports of supply are received and recorded, and where the reports of demand are received and recorded and where is furnished the central directing intelligence for sending the supply direct to the demand.

The National Marketing Machine

These three organized forms constitute the machine of a national marketing system for farm crops. The only other things that we are interested in is to know whether the machine can be built, whether it will work and whether it will do what it is recommended to do. The following explanation and illustrations are entitled to the most careful attention:

Florida Given as Illustration

In Florida there are forty-six counties. We will assume that in each county crops are produced to ship away to market. Also we will assume, for the sake of this illustration, that there is an average of twenty marketing stations, towns, or cities to a county. To get perfect results a local union of the Farmers Society of Equity must be organized at every marketing town or station, or, wherever there is a local organization now it may federate or affiliate with the Farmers Society of Equity so all have the same marketing system and marketing head. (Instructions and terms for organizing and federating will be sent on request.)

A Community Report

In operation each member of the local union or affiliated association will report what crops he has ready to sell, or such as will be ready in a few days, to the secretary of the local association. This can be done in person, by telephone or by mail. **The secretary of the local association will then have a report of all the crops of the members in that community every day.**

A County Report

Each secretary of a local union or local association will then report the same day to the secretary of the county union. Thus we can see that the **county secretary will have a complete report of all the crops in the county, ready to market or to be ready soon, each day.**

A National Report

Each county secretary will then report the summary of all crops in the county to the National Union each day.

We have said that there are forty-six counties in Florida. **Then forty-six messages will report all of the crops in the state of Florida to the National Union or clearing house for registration and direction to the markets.**

We will state this again: First the members report to the local union. This will not be difficult, and it is exactly what they have been doing in the

(Continued on Page Twenty-Three)

BUSINESS EXCHANGE

ONLY $275 BUYS SMALL FARM. Share in profit paid until buyer takes possession. Write quickly for views and particulars. Geo. W. Deen, Box 538, Waycross, Ga.

Amazing Prices on STEEL Shingles

The demand for Edwards "Reo" Steel Shingles has become so big that we now sell them **from factory to user** for less—actually **LESS**—than common **wood** shingles. **And we pay all freight! LOOK** INTO THIS MONEY-SAVING PROPOSITION BEFORE ROOFING YOUR BUILDINGS. **SEND POSTAL TODAY AND GET FACTORY PRICES.**

No Trick to Put Them On

You don't have to nail these **steel** shingles, like **wood** shingles, ONE AT A TIME. **Put on as high as 100 at once,** for they come in big sheets ready to nail on sheathing or old roof. It's **ten** times easier than putting on wood shingles. No extra materials to buy, no painting to do, no tools to borrow. Your hired man can do the job with a hammer.

Absolutely Rustproof

Please don't judge Edwards **Steel** Shingles by common galvanized iron roofing—the kind that rusts. We have invented a method that absolutely **prevents** rust from ever getting a foothold, as 100,000 delighted owners of Edwards Roofs have found out. It's the famous Edwards **Tightcote Process** applied to genuine Open Hearth Steel.

Protect Your Buildings from *FIRE*

Don't take chances of **fire** from defective chimneys, flying sparks and lightning. Roof your buildings with these **Steel** Shingles and make them safe. Remember, nine out of every ten fires start with the **roof.** We specifically **guarantee** every Edwards Steel Shingle Roof against **lightning.** This Guaranty is backed by a $10,000 Cash Bond.

Cheaper Than Prepared-Paper Roofing

Edwards **Steel** Shingles cost **less,** far **LESS,** than prepared-paper or composition roofing, IF YOU FIGURE THE COST PER YEAR. And that's the right way to figure

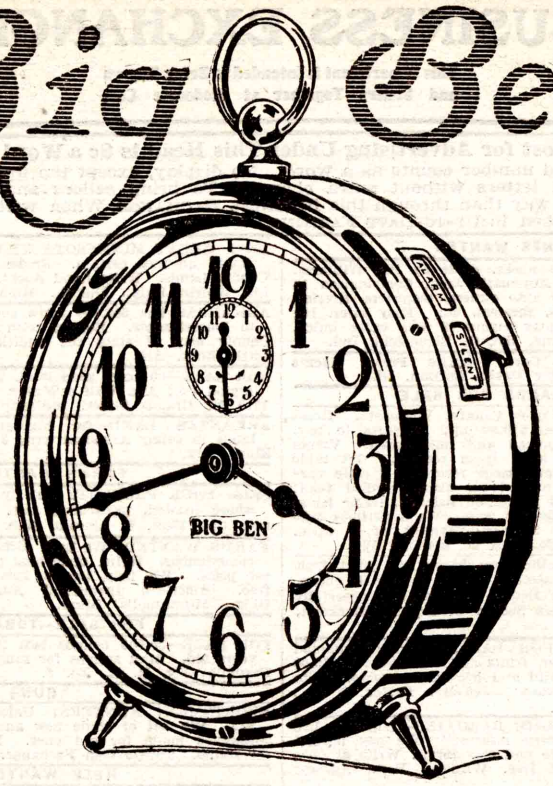
ROSE COMB REDS and Indian Runner Ducks. Free egg price list will interest you. Write now. Geo. Gibbens, Hadley, Ill.

Big Ben



Big Ben—Two Good Alarms in One

Take your choice in Big Ben. He rings either way you wish — five straight minutes or every other half minute for all of ten minutes unless you switch him off. He's two alarms in one.

If you're a light sleeper, turn on the half minute taps before you go to bed. If you sleep heavily, set the five minute call. You can slumber then without the get-up worry on your mind.

When morning comes, and it's announced by Big Ben's jolly bell, you can't help getting up at once, for Big Ben never fails to get you wide awake.

Big Ben is really three good clocks in one, two excellent alarms and a fine time-keeper to keep in any room and tell time all day by.

If you have got to get up bright and early, if you have to get your help in the field on time, ask for Big Ben at your jeweler's and try him for a week. You'll never want to be without him afterwards.

Big Ben stands seven inches tall. He is triple nickel-plated and wears an inner vest of steel that insures him for life. His big, bold figures and hands are easy to read in the dim morning light. His large, comfortable keys almost wind themselves. He rings five minutes steadily or ten intermittently. If he is oiled every other year, there is no telling how long he will last.

He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois*, will send him anywhere you say express prepaid.

Don't Go Through ANOTHER Winter Without It

Perry FRESH WATER System

You simply can't afford to do without a Perry Water System any longer. For health's sake — for comfort sake—for profit sake, don't go through another winter without one, especially when it costs so little to operate and such a modest amount to install.

For the Home:

Just imagine the pleasure and convenience of having water, FRESH FROM THE WELL—in any part of the house by simply turning a faucet. Hot or cold—hard or soft. Think of the thousands of steps and the drudgery it will save. No water to carry — no cold trips to the well — no more frozen pumps.

For the Barn:

A Perry System soon pays for itself by furnishing plenty of water, at just the right temperature. Stock will drink more — thrive better — cows give more milk — make you more profit. For fire protection alone, it is worth many times its cost — will throw a heavy, steady, continuous stream.

WRITE FOR FREE CATALOG TODAY

Tells how you can install it yourself—anywhere in small space—use your gas engine for power without moving it or interfering with its other work — completely solves your water supply problem, summer or winter. Absolutely dependable — fully guaranteed — over 4,000 in use. Estimate of cost gladly furnished. Write for free catalog NOW—see for yourself the great advantages of this system.

United Pump & Power Co. 423 Colony Bldg. Chicago, Ill.

UP-TO-DATE FARMING, Indianapolis, Ind.

The Solution of the Farm Water Supply Problem

PERHAPS no one question is of more vtial interest to the progressive farmer than the problem of water supply, not only as a convenience and saving of labor, but as a means of economy and increasing the profits of the business. Good pure drinking water and plenty of it is essential in raising poultry, swine, horses and cattle. Milk cows especially are affected by the quantity and quality of water they drink. They thrive better where there is an inexhaustible supply of water. It is an admitted fact that the drinking of ice water from an unsanitary open stock tank in the winter time greatly reduces their vitality and diminishes the quality and quantity of milk.

Milk cows in good healthy condition will drink on an average of half a barrel of water each twenty-four hours. It is very much better to let them drink frequently and while they are feeding than to drive them to water once or twice a day where, on account of thirst, they would drink at one time more than is really good for them.

Hogs are peculiarly susceptible to impure water dangers. A writer in a farm paper says:

I can remember when on our farm the water was carried in buckets and emptied into troughs, around which was mire and filth from yards. On hot days it was impossible to keep water in these troughs all the time. We lost our hogs, and eventually lost so many of them that my father went out of the hog business entirely. When he again went into the business he built a large lot extending to a ravine through which water ran from two springs. Our winter yards were supplied with automatic hog waterers surrounded by an approach of stone foundation, which was kept carefully cleaned. The approach to the feeding troughs was made of stone, and cinders and the troughs were washed out with clean water every day. We raised from 200 to 300 hogs every year, and over a period of seven or eight years at least we never lost a hog from sickness. In warm weather a healthy hog will drink a few swallows of water every twenty minutes if he has it within reach.

Clean water is equally important in raising healthy poultry.

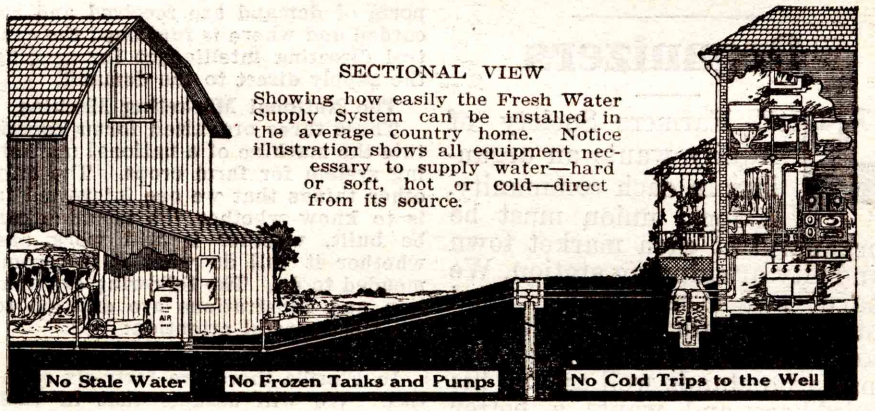
Apparently the attention of engineers and inventors has been turned in other directions and those who have occupied themselves with the domestic water supply problem have not left the beaten tracks very far and have made comparatively few innovations. The advancements made all hinged on the ancient idea of storing water in a tank. First, an open tank placed on a tower or a reservoir, constructed on the side of a hill, then for better protection against freezing the idea of the attic tank was devised. Next came the idea of the pressure storage tank.

While these systems answered the purpose in a way they did not give entire satisfaction. The tank outside of the building was continuously exposed to the elements and consequently short-lived. Furthermore, it supplied warm, stagnant water in the summer time, and failed to give service in the winter time on account of being generally frozen up. The water from an attic tank necessarily took the temperature of the building in the summer time. The pressure storage tank system was an improvement on the elevated and attic tank systems.

The only advantages gained over the attic and elevated tank by the pressure tank is that it may be located in the basement or buried in the ground. In all cases water had to be stored, and the choice was only a matter of location of the tank. With a pressure tank the reserve supply remains stagnant.

After many years of study and experimenting, a Chicago inventor has produced a direct delivery system which obviates all the evils we have described. In the opminion of this inventor the solution did not lie in improving the old method, in arranging a new way to construct a storage tank, or in locating it where it would be less liable to suffer from exposure.

Having been raised on a farm, he knew that water stored in a tank was bound to become foul in a very short time, and realized that in order to obtain water fit to use for drinking it had to be drawn direct from its source. To accomplish this he found it necessary to abandon all old methods and to establishing an entirely new principle, viz., TO STORE THE POWER INSTEAD OF THE WATER. He succeeded in designing a two-cylinder pneumatic displacement pump which, when submerged in the water, would fill by gravity and from which water could be forced by the direct action of the compressed air. The pump does not contain any pistons, as a pressure of air necessary to force the water to the desired height is at all times applied directly upon the water in one or the other of the cylinders. The cylinders of the pump discharge directly into the service pipes, there being no intermediate storage tank between the pump and the fixtures. When an outlet for water is provided by opening a faucet, the air pressure automatically empties the cylinder and starts the pump to operating. It will continue to operate until all faucets are closed



SECTIONAL VIEW

Showing how easily the Fresh Water Supply System can be installed in the average country home. Notice illustration shows all equipment necessary to supply water—hard or soft, hot or cold—direct from its source.

The past few years have witnessed great advances in home comforts and conveniences, especially in the small towns and rural districts. The increase in land value and farm and dairy products have made the farmers more independent and have enabled them to send their sons and daughters away from home to be educated. Upon their return they demand home comforts that they know can be afforded. They have learned the returns that these comforts bring in health, dividends and increased efficiency. They know that no one improvement will pay like a good fresh water system, will put the roses back in mother's cheeks, make the girls happy and keep the boys on the farm, besides increasing the health of the family, decreasing the labor and improving conditions generally.

The up-to-date farmer and his family can now have a morning spray, shower or tub bath with hot or cold, hard or soft water in a bathroom as luxurious as he pleases to make it. He can have perfect fire protection—water al-

ways under pressure, with ability to increase the pressure instantly. He can arrange sprinkling apparatus to irrigate his vegetable garden in case of drought and have water to wash the vehicles and the stables, and to keep the hog pen and poultry yard clean and sanitary, and at a very small expense he can have an attractive lawn and flower garden.

His wife can have a model laundry that the flat-dweller might envy. And, mighty important in dollars and cents, he can provide for his stock water at the same temperature at all seasons of the year. There is almost nothing he cannot have and do with water if he has selected his system of supply with care.

PUZZLE PRIZE WINNERS FOR FEBRUARY 15TH PUZZLE

First Prize, $3—Julia Adams, Bogalusa, La., 84 Avenue C.
Second Prize, $2—Susie E. Niles, Arkdale, Wis., R. R. No. 1, box 25.

The Problem of Marketing Crops

(Continued from Page Twenty-one)

past where there is a local organization.

Second, instead of each local union or association selling in competition with all other local unions and associations in the county and elsewhere, the local union secretary offers nothing for sale, but he reports the supply to the county union. As there will probably not be more than twenty local unions or associations in a county, it will be perfectly feasible for the county secretary to receive and record twenty messages. Then the county union secretary, instead of offering the crops for sale and thus competing with other counties in the state, and with counties in other states over the country that produce the same crops, he will report them by telephone or by telegraph or mail to the national clearing house. As there are only forty-six counties in Florida, if all of them would report to the national headquarters every day, it would only be forty-six messages to be received by the national headquarters.

This, understand, will eliminate all competition in selling, will do away with probably eight hundred selling agencies and will place at the national headquarters a complete report of all the crops that are ready to market in Florida on any day, or that will be ready soon.

What It Means to Get a National Report

There are 3,048 counties in the whole United States. Some of them are not agricultural counties and many of them produce such crops as can be reported once for a whole year. (When crops are once reported and registered they will not be included in subsequent reports.) We believe a conservative estimate of the largest number of counties reporting any day will be two thousand. Assuming that this is correct, then the maximum work of the machine, as far as receiving and recording a national crop report is concerned, will be two thousand reports a day.

We will now state, as a self-evident proposition, that when the supply of farm crops, the necessaries of life are reported by this plan, when they are no longer blindly started out to find a market, but are controlled at one central place known to every handler and consumer, then the demand will seek them.

(To be Continued.)

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

What an Engine Did

By R. E. Olds, Designer

My fame as a car builder, after 26 years, is based in large part on my engine.

To me it's an old, old story. Perhaps it is new to you.

A Lifetime

I was one of the world's first builders of gas engines. Long before the days of automobiles, the Olds Gas Engines were known half the world over. And they are today.

It has taken a lifetime to develop an engine like the one in Reo the Fifth. And even my rivals concede it to be one of the great engines of the world.

My catalog states all the details about it. I won't bother with them here. But the fame of this engine is based on four things:

Its unusual power—
Its enduring silence—
Its remarkable endurance—
Its ease of adjustment.

Radical Tests

We avoid trouble for you by putting each engine to five radical tests in our factory.

Each is run for 10 hours with outside power, then another 10 hours with its own power. Then we take it apart and inspect it.

Then it is made to run a blower, and tested at various speeds. Then it runs an absorption dynamometer, as a measure of its power. Then, in the finished car, we give it the hardest sort of road test.

These tests require 48 hours. But thousands of these engines, run for years and years, are still in prime condition.

We use on this engine, to save ignition troubles, a $75 magneto. And we doubly heat our carburetor, to deal with any gasoline.

So Everywhere

In every part of this car we use the same precautions.

The steel is twice analyzed.

The gears are tested to stand 75,000 pounds per tooth. The springs for 100,000 vibrations.

We use 190 drop forgings.

We use 15 roller bearings.

The tires are 34x4.

Each body gets 17 coats.

When you get a car built like Reo the Fifth there is very small cost of upkeep.

Unique Control

We use in this car the only center control which is simple and out of the way.

All the gear shifting is done by moving a small rod only three inches in each of four directions.

There are no levers, side or center, so the front is clear. Both brakes are operated by foot pedals.

And in this car you find the left side drive, as in the finest cars this year.

Write for our catalog and we'll direct you to the nearest showroom.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.

GREATEST
Cream Separator Offer!

The Melotte Cream Separator—Guaranteed for 15 Years

The Genuine French Melotte Sold in America for First Time

The Wonderful French Machine Sold in America for First Time

This is positively the first bona fide, no-money-down offer ever made on any cream separator. No manufacturer of any cream separator ever ***dared*** to make such a startling offer before. All others who have ever ***pretended*** to offer you a free trial or to send their separator without any money down have taken care to get ***something*** out of you first.

But we don't want ***anything.*** All we ask is your simple request. We send the cream separator direct to your farm absolutely without any money down. We can afford to do this because the Melotte sells itself. It has an absolute self-balancing bowl.

We want you to read every word of this great offer. It is an offer which, we think, proves our ***absolute faith*** in the great ***Melotte Cream Separator.*** You are given the opportunity of seeing just how much cream this marvelous separator will extract from your milk before we ask you to send us one cent. You never saw another manufacturer who was so open-handed in his offer. The reason is that no other manufacturer ever wanted you to know ***all*** about his machine ***before*** paying him anything. We want you to know all there is to know because we know that we have the separator that is right. The principle of the Melotte has been ***proven*** to be right in the greatest dairying countries in the world. Now, read every word of this wonderfully liberal offer.

Sent Without a Penny Down

30-Day Free Trial!

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We send you the Melotte without a bit of quibbling or hesitancy. We neither ask nor want you to send a penny. We don't want a cent of your money. The Separator goes direct to you. You set it up, give it a thorough test with the milk from your own cows. We give you a free trial that *IS* a free trial in every sense of the word. It is a free trial because we don't ask you to pay us any money down—there is no C. O. D.—no lease nor mortgage. You keep your money right in your own pocket. You pay nothing to anybody.

Some people PRETEND to give you a free trial, but they ask you to give them your money first. We are not afraid to let our separator speak for itself. Test the Melotte Cream Separator in every way, watch your profits go up, watch the increase of the amount of cream, then, if you do not believe that you ought to have a cream separator, just send it back at our expense. If, however, you decide to keep this genuine Melotte—the peer of all cream separators—the separator that gives you greater profits than any other—makes every cow you have give you 100% greater value and insures you greater profits from your dairy than you ever made before—we will allow you to keep it on extremely easy

MONTHLY PAYMENTS

These payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't need to be without a cream separator when you can have the separator right in your dairy house while you are paying for it. In reality you do not pay for it at all. It pays for itself.

This is what we want to demonstrate to you. We want to demonstrate and prove beyond all peradventure that the Melotte Cream Separator does pay for itself. Only a few months' use of a Melotte Cream Separator and you will be satisfied that this statement is ***absolutely correct.*** A few months and the separator has paid for itself. It does not cost you a penny because the increased amount of cream has paid for the machine.

Send the Free Coupon now —Today!

Don't delay

We don't want to tire you with a long discussion of how our cream separator is made here. You can best understand this if you will let us send you our free catalog. Besides this free book we have another book which we should like to put into your hands.

Valuable Book "Profitable Dairying" Sent FREE!

Send Today! It Brings the FREE DAIRY BOOK

Just ask for this book and it will be sent to you. It is free. Place your name on the coupon, cut it out and mail it at once. Then we will send you our great free book, ***"Profitable Dairying,"*** telling you everything about cows and dairying, butter and cream—how to feed and care for cattle, how to make them twice as valuable as they are now, how to make more money than ever before out of your cows. This book is written by two of the best known dairy scientists in the country—Prof. G. H. Benkendorf, Wisconsin Dairy School Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wis.

We will also send you Our FREE Catalog, describing fully the great Melotte Self-Balancing Bowl Cream Separator and telling all about our liberal terms. Find out all about our liberal terms. Find out about these terms anyway, even if you don't expect to buy a cream separator *just now.* Remember—no money down, free trial and easy payments—and we let the separator tell its own story. You see with your own eyes why we can afford to guarantee this separator for 15 years. The most sensational offer ever made in connection with a cream separator. Our catalog tells all about it. Don't delay. **Sign the coupon RIGHT NOW.**

Melotte Runs 54 Years!!

At the Melotte works one of the Melotte Separators has been working every day (driven from the shafting) since Nov. 5, 1900, running 10½ hours per day—or 19,687 hours at a cost of only $7.50. Reckoning that a farmer works his separator one hour per day, the 19,687 hours represent (on the farm) a period of 19,687 days, or nearly 54 years. Therefore, the total cost of maintenance for the Melotte separator for 54 years, inclusive of oil, will be only $7.50. At great trials of separators held at Boulogne, France, Oct. 5 to 9, 1905, under the auspices of the Federated Agricultural Societies of the North, the Melotte easily vanquished all other separators—proving the cleanest skimmer and taking less power—and was **Awarded the Gold Medal.**

World's Grand Prize Winner

Here is a small Percentage of the First Prizes the Wonderful Melotte Has Won:

1888—Brussels—International Exhibition—Progressive Prize.
1889—Tongres—First Prize.
1890—Brussels—First Prize.

And no wonder all these prizes have been won! For the Mellotte is different (and better) than any other separator in the world. The bowl turns on a single bearing and is positively self-balancing. The cream and milk chambers are made of white bath tub enamel—not tin. Bowl self-draining. Get free catalog today.

Test With Other Machines

Before you decide to buy any Cream Separator arrange to test a MELOTTE along side of the machine you now think is the best separator in America. We want you to do this. Then there can be no doubt in your mind as to whether you are really getting the best machine. This is the only way to buy a cream separator. Then it will not be necessary to take anybody's word.

You'll know which machine turns easiest—which machine is the best made. You'll know which skims the closest. You'll know which will make you the most money.

Write to us about the MELOTTE and the MELOTTE FREE TEST today. We are the sole factory representatives in America.

UP-TO-DATE FARMING

APRIL FIRST, 1913

The Farmers of Europe Come to America to Make a Living, Why Then, Should Americans go to Europe to Study Their Methods

---

At the time we go to press with this number Indianapolis is isolated from the balance of the country because of a great flood. No trains are running in or out, consequently no mails are received and none can be dispatched. It is impossible to tell how soon train service and mail service will be resumed. We make this explanation for the information of our subscriber

LET US PAY YOU A REGULAR WEEKLY SALARY

Our Offer: To Double the Sales of Our Swellest Made-to-Measure Suits and Pants, We Now Offer Every Man Who Answers, a Big Guaranteed Weekly Salary — in Addition to Cash Commissions. We Furnish Our Men Swell Suits and Raincoats as Samples FREE to Start With.

This is a brand new offer—different from any you ever saw before—and what's best of all, ***we mean business*** and hope ***you*** do. So first, understand clearly, this offer is genuine. We want a man in every town to whom we can pay a big, fat guaranteed weekly salary. And this offer is not for any chosen few ***—but for everybody.*** When we say everybody, we mean everybody—we mean you. With us you need no experience—no capital—no reference—no "pull" or influential friends. We take you without question and assume all the chances. You don't even have to leave your easy chair (or go to any bother or trouble) to get a regular salary job with us. That's how easy it is. ***Read on and be convinced.***

We Are the Only House Big Enough to Pay Regular Weekly Salaries

We "started something" when we put out an announcement offering real salaries to tailoring agents. This you understand, is ***in addition*** to the big cash commissions you make on every sale. It means ***double*** pay, It was the first offer of a regular weekly salary ever made in this business. People thought we were crazy. But we had seen so many men easily make $35 to $65 a week on just commissions, that we figured—if it is easy to make ***that much on commissions,*** think how much more the average man can make with a steady, regular, weekly salary behind him. ***The success of our salary plan was established over night—it was instantaneous.*** So, if you ever see any of the old style tailoring agents ads again offering commissions alone—just remember what a small chance you have with them when they say, "The greatest money-making chance," etc. It ***is*** a chance that ***you*** take. ***But on our salary offer we take the chance.*** See the difference? ***We*** are the ***only*** house that pays you big commissions ***and a Regular Salary.*** And, bear in mind; we don't just pay salaries while business is good. Your pay check comes in regularly during dull times as well (we guarantee this.)

Money Talks—Are You Listening? $5 to $10 a Day Is Easy

It's a cinch to sell our swell tailor-mades and make $5 to $10 a day in just commissions (in addition to your weekly salary). Knickerbocker garments are the ***final word in styles and values.*** We guarantee you and your customers absolute satisfaction—or no pay—and ***prepay all express.*** And remember, we give you a great Sample Suit and Raincoat FREE—just to show the ***"class"*** that goes into every Knickerbocker garment—to help you get started. In short, we do anything that any other tailoring house offers you—only we do it on a bigger, broader more generous scale; and then ***give you a salary besides.*** Knickerbocker suits and pants cost less—and when sold, you know in advance your customers are going to be ***more*** satisfied than if they paid ***twice as much elsewhere.*** Our styles and quality are the guide that ***leads***—and our wonderfully low prices are the goal that all have tried to reach, but failed.

GET YOUR FREE SUIT AND RAINCOAT AT ONCE

Also Our Big SALARIED AGENTS' OUTFIT

Here's a real "outfit"! We mean your ***own*** clothes free and our imposing Knickerbocker style book—the possession of which literally guarantees that you have the trade of your whole town bottled—sealed and labeled "mine." It's the greatest tailoring book ever—the crowning achievement of the biggest, most liberal, most reliable of all cash tailoring houses. There isn't a suit order in your town that this great book won't land for you. And we send everything FREE at once—*prepaid*. The Sample Suit and Raincoat we send will be the swellest, niftiest and classiest garments you ever laid your eyes on—made up in *any style* you desire of *any material you select.*

SALARY COUPON

Knickerbocker Tailoring Co.,
Dept. 414 Chicago

GENTLEMEN:—Without cost or obligation to me—put my name on your ***regular weekly pay roll*** and send me at once your wonderful new 1913 Fashion Book, and complete outfit as offered in your special announcement.

Name.....

Address.....

City..... *State*.....

Fill Out This Coupon—Get on Our Pay Roll NOW!

Don't answer any other ad if you are convinced that you want ***this salaried job.*** But if you are ***still*** in doubt answer some of the other ads when you answer this. Then see what ***we give you*** and see what they ***don't*** give you. This just goes to show the difference in ***our*** spirit and others. They beseech you to answer their ads only. That shows who's afraid to come out into the open and measure up with our great new salary offer and big outfit. Now come on you doubters—you fellows who want to be shown. We have got "the goods" and are eager to convince you. So don't wait—just fill out, clip and mail the coupon—or a postal will do. Take our word for it, there is no better offer—this is your only chance to get a regular salary. We will give you the biggest surprise of your life. Remember, we put you on our regular weekly pay roll as soon as we hear from you. But time is precious. Shoot back the coupon—at once—NOW!

The Department of Agriculture

AGRICULTURE embodies both the science and practice of farming. Those who legally provided for a department of agriculture in our government did so with the understanding and purpose that it should be a special guardian of the farming interests of the nation, and that its efforts should be directed to the promotion of agriculture and the best interests of those engaged in farming.

During the long administration of Secretary Wilson the Department cannot be said to have been held to this purpose. It reached out into almost every line of investigation, in this country and abroad, and became a practical dumping ground for "experts" in all lines of human endeavor. In many respects it seems to have forgotten the needs of agriculture, and many of its reports were for the special benefit of the exploiters of farm products.

We hope the new Secretary will take a different view of the Department and its work. He is comparatively unknown to the agricultural world, and seems entirely unknown to the political world. Like his distinguished chief, he is an educator, and has won many victories in that line. Just what experience he may have had in actual farming, or what personal knowledge he may have of soil culture and the production of crops and their marketing, we are not told, but such practical knowledge must be limited to his early years.

David Franklin Houston, Secretary of Agriculture, was born in North Carolina, February 17, 1866, and is, therefore, forty-seven years old. He acquired the title Bachelor of Arts at the South Carolina college in 1887. He raised this title to Master of Arts in Harvard, in 1892. Tulane conferred upon him the title of LL.D. in 1902, which the university of Wisconsin confirmed in 1906. He was city superintendent of schools at Spartansburg, S. C., from 1888 to 1891, and was a graduate student of political science at Harvard from 1891 to 1894. From 1891 to 1902 he was professor of political science and dean of the faculty of the university of Texas, and was president of the Texas college of agriculture and mechanic arts from 1902 to 1905. He continued in this institution until 1908, when he became chancellor of the Washington university of St. Louis, where he remained until appointed Secretary of Agriculture, and enters the Cabinet from Missouri.

We certainly wish Secretary Houston unqualified success, and trust he may be able to see farming and farmers, the broad interests of agriculture, without having to look altogether through the schools to find them.

Shooting Over the Hill

THE American Congress has reached a point where it has not the confidence of the American people that it ought to have. There is in it more scheming for party advantage than there is of honest, disinterested service of the people. Partisanship is extremely selfish, and its selfishness consists in the turning of public business to personal account. Those who lead the parties see success in the success of party rather than in the public welfare. That is the spirit that prompted the leaders of a party to force the nomination of a candidate at Chicago that barely carried two of our smallest states in the general election.

But there is now an apparent craze to do something unusual for agriculture. The Congressmen read about the high cost of living, and they feel it, perhaps, in their own home expenses. They hear a general murmur throughout the cities that the farmers are not producing so much as they ought to, nor so much as they could if they knew how. Accustomed to look upon farmers as an ignorant class, they conclude that ignorance is manifesting itself in unproductive farming, and they benevolently think that lack of knowledge should be supplied. They read of the railroad demonstration trains, and the princely sums that are being donated by great business concerns, and also of the work of the agricultural schools. In the midst of it all, Congressmen decide the national government should help in the matter, and that it should do it in such a way as to bribe the states to tax their people and join in the work. Hence the Lever bill that we have frequently commented on, and that we printed in full some time ago.

The Lever bill passed the House, but its author was a Democrat, and when it went to the Senate it found there another measure of similar import whose author was a Republican. Thereafter the fight was to determine whether a Democrat or a Republican should be the author of the measure that finally became a law. The Page bill passed the Senate, but neither became a law. The House was Democratic, but at that time the Senate was Republican and neither would adopt the other's measure.

We are glad they didn't. As we have shown in other issues, the scheme is an everlasting tax gatherer, and so far as general benefits to the farmers of the country are concerned, both bills shoot over the hill with no direct aim at anything. Farmers need not be taught that a high salaried "expert" roaming through a county, can be very little help in the production of crops or in more successfully managing the details of farm life. They know that without any teaching. They know, too, that most of the dollars raised by taxation, whether direct or indirect, state or national, must be drawn from the farmers since the farmers are the only actual creators of wealth in the country. The purposes of the Page bill, the Lever bill's Republican rival, are thus summarized by one of its advocates:

To appropriate $3,000,000 annually to college extension work; that is, to carrying to the people the practical demonstration of the scientific agricultural work that the agricultural colleges and experiment stations do.

Next it proposes to give $3,000,000 a year to establish district agricultural schools, the high schools of the agricultural educational system, intermediate between the rural primary schools and the agricultural colleges.

Then it proposes to give $3,000,000 annually to aid education in agriculture, trades and domestic economy in the country schools.

Finally, it gives $3,000,000 annually to aid education in trades and domestic economy in the cities.

The page bill provides further that whatever the Federal government shall give, in either of these four directions, shall be matched, dollar for dollar, by the states. In order to get its pro-rate share of the national money, the state must put up as much more of its own money.

For a nation to offer a state a great sum of money if it will tax its people out of another great sum may not be bribery, but it sounds very closely along that line.

We refer thus to these measures again just for the foolish extravagance of them. Those in high life know little about the common affairs of the country, much less those of farming. Concede that their motives are sincere, still they are all the time shooting over the mark. Farmers are farming well. They are producing abundantly, and supplying all the demands that are reached in this country; and are sending great quantities abroad. Not but what they could produce more, and do it easier. Help them dispose profitably of what they do produce, and then they will produce more, and they'll seek out every point of demand and supply it. Be sensible. Farmers are not fools; and they know when Congress serves them with a purpose, and with real benefits.

The New Administration

A SEMI-MONTHLY publication that must provide for reaching in due time its hundreds of thousands of readers, as UP-TO-DATE FARMING must do cannot treat current events as promptly as dailies and weeklies can do, but for all that it is our pleasure and duty to refer to the great events as they occur.

On March 4th a radical change took place in the United States government. An educational man and a scientist, one with experience as a civil administrator, but not a politician as that word is generally understood now, became the chief executive in place of a politician of much experience and power, and whose acts unmistakably favored the classes rather than the masses. The only interest we feel in the new administration is that of a citizen of a great country, who favors good government, good for all classes alike, and that is anxious for such progress and reform as will minimize the inequalities of opportunities, change evil systems to better systems, recognize the masses that really do the work and pay the taxes, and guarantee like protection and security for all. It matters little to us who hold the offices, provided they serve the public from whom they get their power and to whom they look for their pay.

That public officials often fail in this regard needs no proof. Transpired and transpiring events make it unquestionable. Deadlocks in legislative elections in which representatives of the people, chosen by means of the ballot, hold themselves aloof for months in the discharge of simple duties that a single day should have seen completed, is the manifestation of a spirit which does not make for good government. Those disgraceful contests are not over men. They are not based on a desire to get the best men for the public service, but on a selfish determination to win for the political party. That same spirit sometimes manifests itself in Washington. Party success is too often held superior to the general good of the whole people. A measure may come from one side of the political house, and be opposed by the other side not so much because of its good or bad qualities, but because its adoption might be regarded as a triumph for the party that introduced it. Particularly is this so if the measure is a specially important one.

We want this spirit eliminated from both state and nation. We do not mean that there should be no political parties, but that party spirit and preju-

dice should never get superior to the general welfare as it so notoriously is now.

We bespeak for the new administration the most kindly consideration. President Wilson seems to be broad in his views, liberal in his dealings with men, and courteously considerate of all classes. He is not afraid of innovations, and seems inclined to do what he thinks is right, no matter whether it had previously been done that way or not. That is at least a finger board pointing toward good government. We wish the new President success in his administration.

The Government and Cotton Grading

SINCE 1909 the National Department of Agriculture, by authority of an act of Congress, has been engaged in the grading of cotton and the permanent establishment of standard grades. A bulletin recently issued enables us to give our readers the process employed in such grading and the method of preserving the grades adopted as samples. This will be new even to the cotton growers, for they have had no means of learning these things or what the grading really means. Nine different grades have been established, to-wit: Middling fair, strict good middling, middling, strict low middling, low middling, strict good ordinary and good ordinary. Not many cotton growers could tell to which of these grades their product belongs, and the average grower never will be able to tell. It looks very much like another department effort for the benefit of the buyers and exchanges rather than the growers.

The Secretary of Agriculture convened in Washington in February, 1909, a committee of "prominent cotton growers, dealers, manufacturers, and experts," and that committee adopted a set of grades, which was approved by the Secretary. Within six months after their promulgation, we are told, sets of these grades had been purchased by cotton exchanges, cotton mills, and textile schools in twenty-one states, as well as in England, Germany and Mexico, and it is claimed the sales of grades have doubled each year since then. A set of the grades consists of nine boxes, each containing twelve samples, separately packed, and which show the range of diversity within the grade. These sets sell at $25 per set.

One of the problems which confronted the department at the beginning was the preservation of the grades as originally prepared by the committee. To overcome this difficulty fifty sets of the grades were put up in vacuum tubes and stored for future use. Each separate sample in each grade was placed in a vacuum tube, making twelve tubes for each grade, or one hundred and eight for a complete set. The cotton is first wrapped in chemically white paper and then in pure black paper before being placed in the tube, and in the top of the tube, after the insertion of the wrapped cotton, a two-inch layer of specially prepared asbestos is placed. The air is then exhausted and the tube sealed by fusing off. From time to time one of these vacuum sets is broken open and replaced in grade boxes, each sample having been specially prepared and labeled with that end in view. Thus, it is claimed, the exact grading may be maintained for one hundred years, or indefinitely, and the correctness and constancy of the standard are guaranteed by the government.

No such action was ever taken by the government in regard to the grading of any other American crop, and it is so complicated that it may prove decidedly embarrassing to the planters. Farmers cannot employ this system of grading, and it gives unprincipled buyers an opportunity to falsify the grades. If, however, the farmers were organized and doing their own marketing through their own experts, this danger would entirely disappear, and the grading might be a general benefit to the growers. We are looking forward to the time when farmers will be in a position to do their own business in an independent way as other classes do their business. That time will come as sure as fate.

Why Allow It To Be So

SENATOR GRONNA, of North Dakota, in a speech made in the Senate of the United States, a short time before the inauguration, said:

It is not true that the high cost of living is due to high prices of agricultural products. If you want to help the farmer, if you want to help the people of the country, do something for them that will aid distribution.

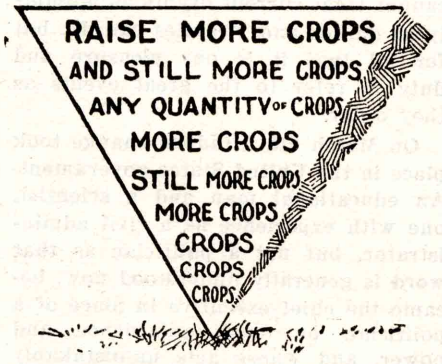
Millions of bushels of vegetables go to decay in certain sections of our country, while in other sections the public is hungry

Why allow things to be that way? The country is honey-combed with railroads, and trains on those railroads are anxious to carry freight. Why are not the wasting products taken to those who are "hungry for them?" It is because of the system. Profit grabbing handlers can better control the price and make more out of the stuff by having the products go to a few market centers and there is where they go until those points are supplied and then the remainder stays in the fields, gardens and orchards. It looks like the entire world would rise up and demand a different marketing system.

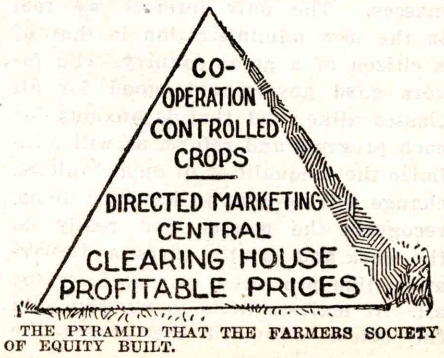
It is Hard to Be

"A man would be all right if he was as smart at forty as he thinks he is at twenty."

"Yes, and he would be a wonder if he was as smart at twenty as his mother thinks he is at two."



THE PYRAMID THAT THE ADVOCATES OF EXCLUSIVELY LARGER CROPS BUILT.



THE PYRAMID THAT THE FARMERS SOCIETY OF EQUITY BUILT.

Editorial Paragraphs

A Big Trip—A bulletin issued by the Department of Agriculture tells us of a trip one of the "experts" made to the far east in "search of natural enemies of the citrus white fly." Of course he found them. It is the business of the "experts" to find things when they are sent abroad, away to the distant Orient, for that purpose; but the department tells us "further investigation will be necessary before they will be of any practical use" in this country. Somebody will have to go back again. The white fly is a pest in the orange and lemon groves. Sending someone around the globe at public expense to find its enemy, but one who could not learn enough about it after he had found it to make it useful, is giving the whole country a lemon sure enough. But that is just like the Department of Agriculture.

Congressional Seeds—Is it possible that the Congressional free distribution of worthless seeds has been knocked out? It rather seems so, as the Senate refused to approve the appropriation for that purpose. For many years large sums have been drawn from the treasury to pay for the commonest kind of seeds in packages, often actually worthless, for Congressmen to send to their constituents at home.

Kicked Out—"The king can do no wrong" as a legal proposition in England was kicked out of this country when Cornwallis surrendered to Washington and British authority went back over the waters with the defeated armies of the king. But some of our own people now seem to want to transfer that maxim to our courts and the judges that preside over them. Judges must not be questioned as to their decisions. Yet one high up was recently convicted of a high crime and was driven from the bench, but it cost about $200,000 to do it; and now the report comes that the supreme court of a great State has been habitually riding on passes given them by a certain railroad in that state! Oh, no; judges can't do anything wrong; their decisions must stand. Suppose the packing houses should furnish them their meat and their flour. It would be just about the same, wouldn't it? Judges should be held as responsible as any other public servants.

Every Day.—Each day brings us most enthusiastic approval of our unbiased and unprejudiced course in treating all questions of public interest. We could make more money by pandering to special interests as so many public journals do. But we could not do that and be what we are. Hence we are more determined than ever to stand strictly by the general interest and the good of all. Reform in the selling, buying and distribution of farm products is our theme, and to secure better and steadier prices to farmers without adding to the cost to consumers is our mission. We know in these regards our readers can depend on us, and we want their help. The new national administration is now getting well under way, and the new Congress will very soon be at work. All sorts of things will appear in the papers, but unprepudiced people want the truth. We wish our list could be doubled for this summer. We feel that we could do so much more good. Speak to your neighbors and help us a little.

Prices Going Down—The price of farm products as controlled by the market .manipulators is still going lower. March 1 the average price of corn in this country was 52.2 cents a year ago it was 66.6 cents; wheat was 80.6 cents, a year ago it was 90.7 cents; oats was 33.1 cents, a year ago it was 49.8 cents; barley was 48.9 cents; a year ago it was 91 cents; rye was 63.2 cents, a year ago it was 84 cents, buckwheat was 67 cents, a year ago it was 76.9 cents; potatoes were 52 cents, a year ago they were $1.02. Hay, March 1, 1913, was worth $11.34 per ton; a year ago it was worth $15.69 per ton. Eggs were worth 19.4 cents per dozen March 1; a year ago they were worth 24.5 cents. Cotton, butter and chickens are a small fraction higher, but vegetables and fruits are much lower. Live stock, however, are uniformly higher.

Big Dificit—A short time before retiring from the Presidency, Mr. Taft notified Congress that the treasury faced a deficit of $25,000,000. To guard against such deficit the retiring President recommended the retirement of the greenbacks, repeal of the sinking fund law, centralized supervision of receipts and expenditures, reorganization of the civil service and the abolition of numerous useless jobs, consolidating all government mints and assay offices into one big central plant, the elimination of waste in government printing, and requiring postmasters to do their work not so much by proxy. It is a pity Mr. Taft did not discover these things during his first rather than his last year.

Financial Remedy—A correspondent wishes us to give a remedy for the terrible financial condition of this country. There is a remedy, and we believe it could be applied; but when ever it is applied there will be such a financial upheaval in this country as was never before experienced in any country. The money power will take from them the financial control of the country, and anything short of that will be no more than a palliative.

The Mortgage-Bond Scheme.—In opposing the mortgage-bond scheme that has been considered in Congress, we have never implied that there are no farmers in debt. We disputed the statement that the farmers of this country owe six billion dollars, but they do owe and need money. Neither do we claim that there are no lands under mortgage, but the mortgages of today are very different from those provided for in the bond scheme. At present if a farmer must have some money and must give his land for security, he executes a personal mortgage, which secures only the amount of his own debt, and it is held by the lender or his personal assignee until the debt is due and is paid. It does not go on the stock exchange market and become an element in stock speculation. The bond scheme proposes that farmers combine, put their lands together and issue a bulk mortgage to form a basis for stock issues, that may then be absorbed by the great financing schemes, and finally acquire the real estate, the homes of the people, by stock absorption. That is what we have opposed, and we still oppose it as the death knell of independent homes in this country.

Gleanings from All Fields

And What We Think of Some Current Events

A Long-Established Marketing Association

FROM THE MARKET GROWERS JOURNAL

The activities of the Eastern Shore of Virginia Produce Exchange are confined to an area of about 700 square miles of the peninsula between the Chesapeake bay and the Atlantic ocean, and the principal products marketed by the association include Irish and sweet potatoes, strawberries, cabbage, and onions. At present the output of 2,500 to 3,000 farmers is marketed.

Two million packages, mainly barrels, of produce were marketed in 1911, and during 1912 over 4,600 cars of Irish potatoes, 230 cars of strawberries, about 150 cars of cabbage, and 100 cars of onions. The total number of cars of sweet potatoes shipped by the middle of November was about 3,200. The volume of trade for 1912 aggregated about $3,000,000. Shipments are made to all sections of the United States, except the Pacific Coast, and also to a number of Canadian markets.

No member of the association is permitted to turn any part of his produce over to local solicitors or sell any part of it to speculative buyers to be sold in competition with the goods of the association. A person can secure membership by becoming a stockholder, or by purchasing (for $1) a "shipping" privilege.

The association is divided into thirty-four local divisions, each of which includes from one to four shipping points. Each local division elects annually a director of the general board and an agent for each of its shipping points.

A local inspector is appointed for each shipping point, but in order to keep these inspectors as free from local influence as possible their selection is left to the board of directors instead of to the local divisions.

The administration of details of the business and, in a large measure, the shaping of its general policies have been left to the general manager and the secretary-treasurer of the association.

The shipping season begins with strawberries, about May 1, and extends with a succession of products until December, when the last of the sweet potato crop is handled.

The produce is brought in carts or wagons to shipping stations. Here the local inspector examines each load, being required to empty at least one barrel from each load of Irish or sweet potatoes. If the standard of the association, as to size and filling of packages and quality, condition, and culling of contents, has been maintained, the inspector permits the burlap or cotton tops of the barrels to carry the "Red Star Brand," the registered trade-mark and official seal of the association.

If the requirements of the association are not maintained the inspector loads the produce into an "unbranded" car, or they are consigned to an official selling agent of the association to be sold upon examination by the buyer in some of the nearby eastern markets.

The local agents keep records of all deliveries of produce, and after sale distributes to individual growers the proceeds when received from the general office in the form of a check covering the entire day's sales.

All sales are made by the sales department at the general office upon telegraphic quotations, open for acceptance only on date of offer, and each day's loading is cleaned up before the following day.

In determining prices the general manager and his assistants are guided by information from two sources. From a private switchboard in the general office constant telephonic communication is maintained with each of the forty-four shipping points. Early each morning the local agent at each point informs the general office of the probable extent of his loading for the day, and at intervals during the day gives information as to the number of cars actually loaded and awaiting sale. The question of supply is in this way accurately guaged; that of demand is covered by telegraph.

Full telegraphic information is received daily from the New York representatives of the association and from its five resident salesmen in other market centers of the United States and Canada as to the exact conditions there prevailing and the offerings and supplies received from other producing sections.

In addition to resident salesmen in certain market centers, local brokers are employed in a number of markets. In a great number of other markets, embracing probably a majority of those in which the association sells, direct telegraphic communication is maintained with wholesale buyers, and sales are made and adjustments effected without any intermediation.

In one season the item of telegraphic expense of this association reached a total of $20,000 but the use of a private code has reduced this expense some.

Sales are made f. o. b. loading point, the buyer to assume the risk of delay or normal deterioration in transit. Many losses are sustained each season from damage to or defects in produce which can not be shown to have arisen from causes fairly included within the risk taken by the buyer. These losses and those resulting from occasional bills found to be impossible of collection are borne by the association, and the individual shipper is guaranteed against every sort of loss except that arising from the possible decay of his goods which would most probably have results from improper handling in the field or lack of reasonable care in protecting his products from extremely hot or cold weather. In general, however, even this exception is not insisted on, and it is the usual practice of the exchange to pay in full for all products delivered to it, regardless of losses, except during occasional periods of extreme weather conditions and after express warning has been given of the need of extra care.

All expenses of the exchange are met by a commission of 5 per cent. on the goods sold by it, and a rate of 3 per cent. on the small quantity of produce, chiefly odd lots of off grade goods, which it consigns to official selling agents in nearby eastern markets. Out of these commissions a surplus of about $80,000 has been accumulated in favorable years, and this, with the paid-in capital stock of $42,000, is deemed a sufficient working capital. Henceforth only one-half of the annual net earnings is to be carried to the surplus fund, and the remainder shall be distributed each year among all the exchange shippers in proportion to the amounts of produce they contribute.

From above account of marketing any county, or several counties in a district can get a good idea of marketing as a unit. Many units of this kind federated will make a national marketing system as we recommend.

Go Slow on Soil Experts

A. P. Grout, president of the Illinois Farmers' Institute, stated in his address at the institute's meeting at Sterling, Ill., as follows:

"County officials should go slow on the getting of soil experts. There is a scarcity of soil experts in the country, and a soil 'doctor' who is no good will be a bad thing for the farmers."

S. D. Bureau of Information

Mr. H. O. Richards has introduced a bill in the South Dakota Legislature which provides for a bureau in each county, where any body can register his wants by letter or 'phone for labor, live stock or cereals, such information to be forwarded on daily advice sheets to the State Commissioner, who tabulates the same and notifies by postal card the people who may be registered and who come nearest to supplying the wants. It is claimed for the idea that when the people become accustomed to the use of free state-wide information, the blessings of that knowledge will be great. Mr. Richardson says he believes this bill, if it becomes a law, will be the forerunner to the solution of the distribution of farm crops.

The Profit in Cotton

Dion H. Butler, in the Progressive Farmer, says this:

"The way to settle forever the question of the profit of making cotton is to forget at once all about the size of the crop this year, last year or any other year, and to cease to concern yourself over the price of the crop next year or any other year, for that will take care of itself. What concerns the farmer is how to get the most stalks to the acre and how to get the most bolls on the stalk. He must devote himself to the small unit, the stalk, and he must consider nothing but the stalk and the number of bolls he can put on it."

Comment on this recommendation is unnecessary for readers of UP-TO-DATE FARMING.

A Speculator's View of the Chicago Board of Trade

James A. Patten, the millionaire cotton and grain speculator, recently said:

"The Government is right in its contention that the fixing of a 'call' price on the Board of Trade is in restraint of trade. Dealers elsewhere, where there is nobody to establish a 'call' price, enjoy a freedom in buying and selling that does not exist in Chicago during the twenty-one hours of the day that the board is not open."

The Board of Trade faces prosecution by the Government, a bill in equity charging violation of the Sherman anti-trust law having been filed against it recently.

Effort to Help Farmers Is Misdirected

Representative Moss of Indiana, in Congress, said before the Committee on Expenditures in the Department of Agriculture:

"The most serious indictment that has come to us about the scientific work of the agricultural department, is that we have been going on increasing the appropriation along certain lines, yet the crop yields all over the country are remaining stationary. In every line of human endeavor, knowledge is being more widely diffused, and my own belief is that we are already spending too much effort on what is known as 'farm demonstration work.' In other words, the Department of Agriculture is trying to carry to the individual farmer, of whom there are millions in the United States, an impossible problem."

This is precisely the idea that UP-TO-DATE FARMING has been advancing for a number of years. It certainly has been demonstrated by this time that without the ability to sell crops at steady and profitable prices, to get enough money to renew the fertility of the soil, that no amount of money expended for demonstration work to increase the yields will avail.

Mr. Dooley and Common Sense

"Good mahrnin', Hinnisey."

"Good mahrnin', Mister Dooley. How does that movemint ag'inst this Inglish suffragits shtrike ye?"

Hinnissey, it doesn't hit me as hard as it hits thim er there would be no pace on airth until iv'ry shtorage aig wus busted in th' Hinglish Channel.

"I fear ye're sort of radical on this matter, Misther Dooley."

"Not a bit uf it, Hinnissey. I'm only common-sinsed. Th' worm is toornin' beneathe th' hale af th' British nobility. Thim dooks an' lords have bin livin' off th' fat uf th' land with nivir a thought f'r th' hand that rocked the craydle er lifted th' taypot er peeled th' petaytes. I till ye, Hinnesey, if a mon er a woman's goin' to git along in this world they've got to be a bit radical at toimes. They've got to take th' bull by th' harns an' give thim a soodin twist that will shtart new thoughts in th' bull's cranium. I've choost had a letter frum me nephew in Colorady an' he thinks jist th' same as mesilf."

"An' what does he say, Mister Dooley?"

"He says that him an' some ither min seen that there wus a big waste in our marketin' systim an' they made up their minds that they would change things around. They formed th' Grower's Fruit Distributin' Company with th' idea uf sellin' fruit an' projuce direct to th' consumer at raysonable prices, an' at th' same toime raytoornin' to th' grower what his product is worth. They arganized with a membership of wan hoondred members to shtart with.

"What will they sell, Mister Dooley?"

"Frish fruits an' viggytables, mon, an' all kinds of jellies, jams, prayserves, butters an' ither by-products, an' a lot uf th' home-made stuff put up by th' growers' wives an' daughters. They're gettin' out cattylogues that will till all about what they've got for sale or whin they'll have it. They're goin' to ijjucate th' paypul an' use some common sinse."

"Mister Dooley, I approve uf all that with me whole harrt. It's a foine scheme. It's something that th' wurrld has bin waitin' for. Iv cahrse, it's not on a big scale out there, but jist wait until some big movemint loike th' Fahrmers Society uf Equity gits under full shwing an' there'll be no more chanct to shtop it than there will be to flag a Kansas cyclone."

Smile Awhile

Might Do Better

"Of course, Susan, if you intend to get married, that is your business," said the mistress to the hired girl, "but you mustn't forget that marriage is a very serious matter." "Yes, ma'am," was the reply, "I know it is sometimes, but maybe I'll have better luck than you did."

That's Why

"Mamma, when Uncle Jim was here he said his cow licked her calf because she loved it. Do you love me when you lick me, mamma?"

"Yes, dear, I love you."

"Then, mamma, I wish you wouldn't love me quite so hard."

A Cuss Word

Little Pete, who was entertaining the preacher till his mother should come in—"My mama swears."

"Oh, you must be mistaken about that!"

"No, I ain't. She told papa she darned his socks."

Thinking of Different Things

The old couple from the country were sitting in the park enjoying the electric lights and the unusual surroundings. The band was playing vigorously some distance away and the katydids were vigorously making their rasping music in the trees. The old man was intensely interested in the music of the band, and the old lady was as intently listening to the katydids. "Isn't that fine?" asked the old man as the band ceased a moment. "Yes," said the old lady, "and to think they do it all with their hind legs!"

Perhaps So

"If flesh is grass, as the Scriptures say, then what is the old maid?" asked the quizzing idiot.

"Baled hay," sneered the old bachelor.

Hard on the Weather

The hired girl was very careless and seemed to break almost everything she touched. Finally she knocked down and broke the thermometer that hung in the front porch. "Well, well," said the lady of the house, "you've at last managed to break the thermometer, haven't you?" "Yessum," said the girl sadly; "it sure is too bad, for now we'll have to take the weather just as it comes, won't we?"

Taking it Philosophically

The hired girl had not been there long, but she and the mistress could not get along well. As a bluff the husband said, in a tone of sarcasm, "It is a pity I did not find a wife that suited you better." "Never mind," replied the girl with utmost composure. "Never mind; we all make mistakes."

Must Get Inside

"I tell you that Simpkins is a bad egg, and everybody knows it; but no one seemed to realize it so long as he had plenty of money."

"No, you can't know a bad egg till it's broke."

Bound to Be Fresh

City Customer—Are you sure those eggs are fresh?"

Farmer, Selling Direct—Yes, ma'am, we won't allow our hens to lay any other kind.

Sure Thing

She (reading)—What did you think of this article on Arctic exploration?

He—Full of hard, cold facts.

Crop Prospects *and* Market Reports

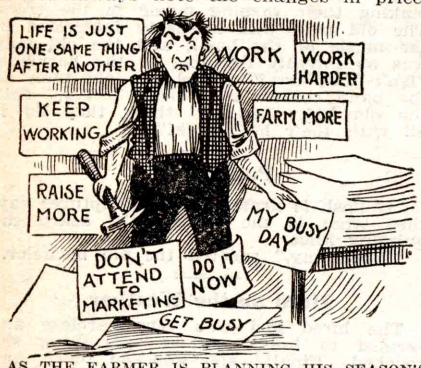
Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

CROP outlook is good. Wheat and grass have come through the winter with less damage than in many years. The winter was mild and planting for early crops in Southern states was usually done ahead of schedule time. The spring has been, so far, free from damaging frosts and practically all planted crops are coming forward with a rush. Are we to have another record breaking crop year? Winter wheat, grass and hay give excellent promise for making heavy yields. Summer crops cannot be forecasted with any degree of accuracy now. While there has been plenty of rainfall, in most sections to date, in some excessive, droughts may occur later. It is, however, unreasonable to expect the crops of 1913 to be as large as the unprecedented crops of 1912.

Wheat shows a good decrease of visible supply, but corn is increasing too fast. We recommend less marketing. This will probably occur now that the spring work in the corn belt has begun. Oats also shows moderate increase against a decrease last year. But, considering that the crop was about a half larger, the visible indicates remarkable control by farmers.

There has not been much change in the price of wheat, but corn has advanced a couple of cents, while oats is practically unchanged from two weeks before. The reader should always note the changes in prices



AS THE FARMER IS PLANNING HIS SEASON'S WORK, HE SHOULD NOT FORGET THE MOTTOES THAT ARE TO BE HUNG ON THE WALL. TO HELP HIM WE OFFER THESE SUGGGESTIONS. WE OBSERVE, THOUGH, THAT SYSTEM IN BUSINESS IS WORTH MORE THAN MOTTOES.

from the year before as shown by the tables. Live stock prices are maintained and they suggest feeding corn and oats instead of selling at current prices. Reports reach us of feeding wheat in the northwest, rather than take current low prices. Spring wheat still holds about 15 to 20 cents a bushel under winter wheat.

Latest available data indicate that the so-called world production of several important crops in recent years was as follows, expressed in thousands—i. e., 000 omitted: (Figures from the Department of Agriculture.)

Crop	1907	1908
Wheat, bushels	3,133,965	3,183,161
Corn, bushels	3,420,321	3,606,926
Oats, bushels	3,603,896	3,591,012
Barley, bushels	1,271,237	1,274,897
Rye, bushels	1,538,778	1,590,057
Potatoes, bushels	5,122,075	5,295,043
Flaxseed, bushels	102,960	100,850
Cotton, bales	18,329	20,757
Tobacco, pounds	2,391,061	2,382,601
Rice, pounds	152,558,132	155,024,303
Hops, pounds	215,923	230,220
Sugar, long tons	13,675	14,289

Crop	1909	1910	1911	1912
Wheat, bushels	3,583,019	3,574,935	3,532,542	3,758,652
Corn, bushels	3,563,221	4,031,625	3,461,181	(1)
Oats, bushels	4,312,882	4,182,410	3,784,982	4,598,059
Barley, bushels	1,458,263	1,388,734	1,372,431	1,454,009
Rye, bushels	1,747,123	1,673,473	1,578,603	1,899,551
Potatoes, bushels	5,595,567	5,273,234	4,787,993	.....
Flaxseed, bushels	100,927	84,524	98,960	.....
Cotton, bales	17,756	19,684	23,421	.....
Tobacco, pounds	2,742,500	2,816,101	2,626,132	.....
Rice, pounds	179,845,558	178,447,359	174,404,903	.....
Hops, pounds	128,173	188,951	160,330	210,158
Sugar, long tons	14,655	16,470	15,472	.....

1 Total production of countries from which returns have been received in 1912 is 4,016,750,000 bushels, against 3,133,421,000 bushels for the same countries in 1911.

We have said that the world's crops averaged very close, one year with another, but the 1912 world's records were broken quite generally as far as the figures disclose, as the records for the United States were broken.

The following tells the balance of the market story:

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on March 15, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X indicates increase.)

	Mar. 15 1913 Bushels	Change from 2 wks. before Bushels
WHEAT	68,438,000	—2,307,000
CORN	25,170,000	X 4,721,000
OATS	16,738,000	X 1,397,000
BARLEY	6,177,000	X 26,000

The visible supply of wheat in Canada on the same date was 44,567,000 bushels. This is 428,000 bushels less than two weeks before and 8,415,000 bushels less than a year before. The visible supply of oats was 8,566,000 bushels on the same date, which is 309,000 bushels less than two weeks before and 1,086,000 bushels more than a year before.

CLOSING PRICES OF CASH GRAIN

Cash grain closed in the leading markets on March 22, two weeks before and a year before as follows:

WHEAT, NO 2 RED

March 22		2 Wks. before		A yr. before
Chicago	1.02	@1.06	1.04	@1.04½
St. Louis	1.01½@1.09	1.11	@1.12	1.04 @1.05
Kan. City	1.01 @1.07	1.00	@1.06	1.01½@1.02½
Cincinnati	1.03 @1.11	1.06	@1.09	1.04 @1.06
New York		1.08½@1.10		

Minneapolis—Spring wheat, No. 1 hard, 86¾c; No. 1 northern, 85@86¼c. A year before, $1.08 and $1.07¼ respectively.

CORN NO. 2 WHITE			
Chicago	53	50 @50¾	76 @77
St. Louis	54	52½@53	79½@80½
Kansas City	51½	49½@50	78 @79
Cincinnati	55 @56	54 @55	81 @82
New York		57	

OATS, No. 2 WHITE			
Chicago	34¾@35½	34¾@36	56¾@57
St. Louis	35 @35½	35½	58 @58½
Kansas City	34½@35½	34 @37	56 @56½
Cincinnati	36½@37	36 @37	56½@57
New York		38½	

FUTURE PRICES OF CASH GRAIN

Chicago grain futures closed on March 22, 1913, and two weeks before as follows:

WHEAT—May, 90½c; July, 90c; September, 89⅝c. Two weeks before, 91⅜c, 90½c and 88⅞c respectively.
CORN—May, 53⅜c; July, 54¾c; September, 55¾c. Two weeks before, 52¾c, 53⅜c and 54¾c respectively.
OATS—May, 33⅞c; July, 33⅞c; September, 33⅝c. Two weeks before, 34⅛c, 34⅛c and 34⅛c respectively.

COTTON

NEW YORK, March 24, 1913—Cash cotton closed as follows: Middling upland, 12.60c; middling gulf, 12.85. The price is 20c a cwt. higher than two weeks before and $1.95 higher than a year before.

LIVE STOCK

Indianapolis Stock Market, March 22, 1913

CATTLE—Range of day's quotations for steers	$6.75@8.75
Good to choice steers, 1,300 lbs. and up	8.25@8.75
Good to medium steers, 900 to 1,150 lbs.	7.60@8.00
HOGS—Range of day's quotations	8.00@9.35
Range of day's paying prices	6.50@9.35
Best heavies, 200 lbs. and up	9.25@9.35
Common to choice ligths, 130 lbs. and up	9.25@9.35

The prices of cattle are unchanged from two weeks before. The prices of hogs are about 25 to 40 cents a cwt. higher than two weeks before.

CHICAGO PRODUCE MARKET

March 22, 1913

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last Week	Last Year
Monday	87	90	178
Tuesday	34	32	162
Wednesday	62	54	60
Thursday	42	33	56
Friday	65	55	74
Saturday	52	65	42
Total, 6 days	342	329	572

An easier feeling pervaded the market today and holders found it impossible to get satisfactory bids for all their holdings. In most instances receivers would not make concessions and several cars of potatoes were carried over because steady prices could not be secured.

Sales reported were: Wisconsin Rurals, in bulk, 2 cars dark at 44c, 3 cars at 45c, 2 cars at 46c. Sacked, white stock—2 cars at 42c. Rurals—2 cars at 45c, 2 cars at 46c.

Per bu. bulk or sacked, Wisconsin, Kings or Burbanks, ordinary, mixed, to good sound	42@44c
Dusty Rurals, outside fancy	45@48c
Minnesota round white, bulk or sacked	40@46c
Seed potatoes in 2½ bu. sacks, Early Ohios	41@43c
Rose	43@45c
Triumphs	50@52

The price is a shade higher than two weeks before, but there is a weakness in the market, probably because of the open season for shipping having arrived that seems to indicate lower prices. The price a year ago was about 60c a bushel higher.

ADVICE—We advise our readers to market their potatoes promptly at best prices obtainable. The supply in the country must be large yet while the early

Change same period last year. Bu.	Change from a year before sloysng	Change from 2 yrs. before Bushels
—3,490,000	X 9,052,000	X 24,435,000
X 557,000	X 6,816,000	X 4,179,000
— 978,000	— 145,000	— 3,114,000
— 657,000	X 2,840,000	X 4,382,000

crop in the south promises a large yield and is earlier than common.

NEW POTATOES—Dealers report Bermudas very fair sale and steady. There have been a few Florida red received lately in hampers and they have sold. White Floridas in barrels at the same time rule dull and slow. Quotable:

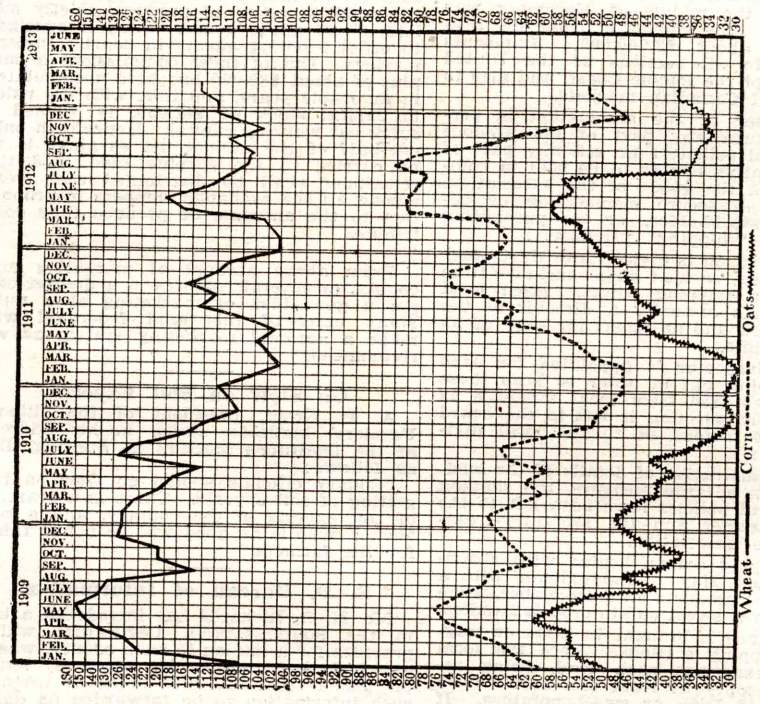
Per barrel, Bermuda, red, No. 1	$6.50@
No. 2	5.50@
Florida white, No. 1	.@4.50
No. 2	.@3.50
Hampers, Florida red	$2.25@2.50

The prices are practically the same as two weeks before. A year before the prices were about $1 a barrel, and 25 cents a hamper higher.

SWEET POTATOES—Are steady for good, at the same time dull and easy for common. Also slow and easy for those packed with a few good on top and the rest of a package filled in with common and uneven stock.

Retailers don't want goods where packages run uneven, and in which case customers pick out the best and leave the rest. That is only reasonable.

Barrels, Illinois	$2.50@3.00
Hampers, Jerseys	1.40@1.50
Delawares	1.25@1.35
Illinois, good	1.00@1.10
A few really fine, straight packed, quoted	1.15@1.25
Stock a little scabby or stock topped off	.75@ .85
Poor	.50@



This chart shows the highest monthly cash prices for the three leading grains at Chicago, for a period 1909 to February, 1913, inclusive. The figures on right and left margins are prices in cents. The lowest prices for February were as follows: Wheat, $1.02; corn, 48c, and oats, 33½c. This chart will be continued

BEANS—In this market an easy feeling has prevailed lately. Slack order of demand has been the main reason. Easier prices followed. Both pea beans and red kidney declined some during the week while the best grades had some trade, the common had little. Pea Beans—

Hand picked, choice	$1.90@2.00
Really fine, bright	2.20@2.25
Prime	1.80@1.90
Stock faulty	1.00@1.50

Mediums nominally about same as pea beans.

Red kidneys, choice	$2.10@2.20
Prime	1.90@2.00

White kindey, nominal.

Brown Swedish, long	1.25@1.50
Round	1.25@1.50
Limas, per 100 lbs.	6.40@6.50

Pea beans are 10 to 15c lower for poor grades and unchanged for fine, from two weeks before. Red kidneys 10 to 15c lower, others unchanged. The price a year before was about 50c a bushel higher for pea beans.

ADVICE—Sell beans gradually, but put them in fine condition before offering them if at all possible.

BROOM CORN—Sales are only moderate. Former prices are reported asked. Common grades are very dull and weak.

Per ton, Illinois Corn	$100.00@120.00
Oklahoma	50.00@65.00

No change in price from two weeks before. A year ago the price was $90 to $180.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	12,281	17,368	6,560
Tuesday	11,580	13,741	10,291
Wednesday	12,933	14,440	9,759
Thursday	12,056	11,849	6,759
Friday	11,488	10,081	9,592
Saturday	19,032	9,726	7,622
Total	79,376	77,805	50,583

Receipts, April 1, 1912, to Mar. 22, 1913, 3,284,781 cases
Receipts April 1, 1911, to Mar. 23, 1912, 2,707,541 cases
Receipts April 1, 1910, to Mar. 25, 1911, 3,326,048 cases

An easier feeling again existed and quotations ½c lower than yesterday.

The market was more quite. There was some demand, but not as good as it was during the early part of the week. The Eastern trade was about all supplied, and this made considerable difference in the volume of business. There was less call from retailers, and there were also fewer outside of nearby local orders. Prices, however, are reasonable for the time of year, considering high prices for food products, and holders are not particularly uneasy with the stock no larger than it is at present. The receipts showed up considerably larger today.

Miscellaneous lots, cases returned, 16@16½c, depending on quality.

Ordinary Firsts quotable at 16@16½c.
Firsts quotably firm at 17c.
Checks—Fresh quotably 13@14c per dozen.
Dirties quotably 15@15½c.
Duck Eggs—A few offered; quotably about 25c per dozen.
Goose Eggs—Quotably about 50c per dozen. Very few on sale.

The price is about ½c a dozen lower than two weeks before and about 5c a dozen lower than a year before.

ADVICE—Organize. Decide on a minimum of 15 cents a dozen at the farm or nearest market point for fresh eggs. Every dozen that will not be taken at this price ship and store. In this way 15 cents will be paid for all the immediate consumption wants and the eggs in cold storage will belong to the producers and not to speculators. A few more hundred points organized and handling the egg business along this line will revolutionize the business. See also "Personal" department of this paper.

APPLES—Sales have been fair all the week. Today the market was quiet. It usually is so on Saturday. Supply is liberal. The disposition is to sell, especially where stock is not fine. There is an easy feeling in the market.

Market no More Crops the Old Way the Equity System is Better

WHEN TO SELL WHERE TO SELL HOW TO SELL

Tell us below what you have to sell now, or will have in the future, and we will help you to get it to the best market. This applies to grain, live stock, cotton, vegetables, fruit, hay, eggs, poultry, in fact any farm crop. Fill out the following blank very plainly. No attention will be given to blanks illegibly written.

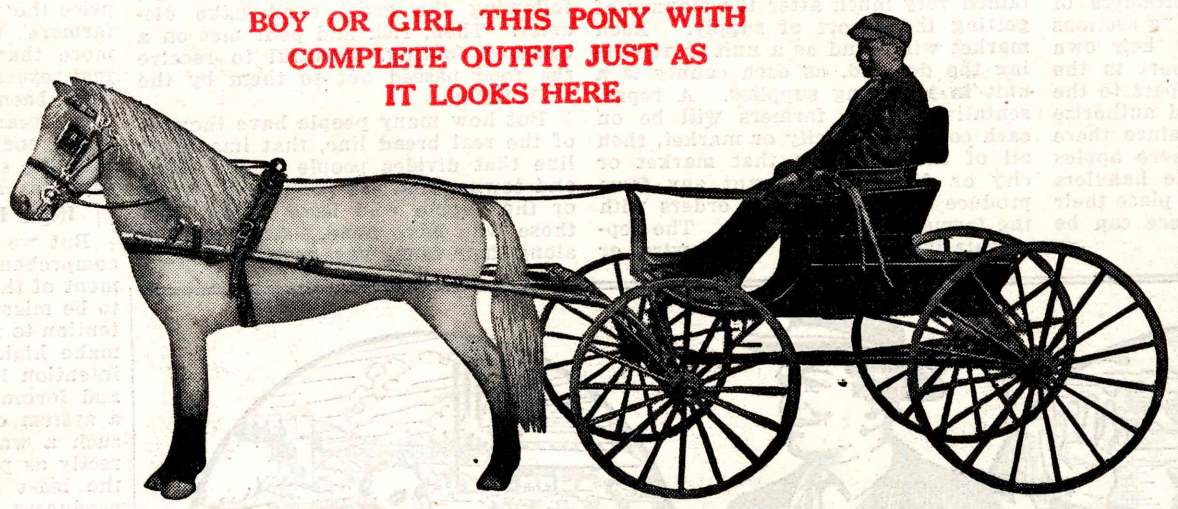
This Pony Free

To Some Lucky Boy or Girl

"SULTAN"

"Sultan" is a beautiful cream colored pony with black points, about 40 inches tall and weighs close to 300 pounds. You seldom see a pony like him except in a circus or a pony show; in fact we were lucky to get a pony like **"Sultan."** We selected him from over 100 ponies at the famous Heyl Pony Farm at Washington, Ill. and we think he is undoubtedly the finest pony of all the 85 we have given away. You would be the happiest child in the United States if you were the proud owner of **"Sultan."** Just think of the fine times you could have taking your boy and girl friends out riding in his nobby pony wagon and when you did not wish to drive him you could go for a horseback ride early in the morning. But best of all **"Sultan"** is as kind and gentle as a kitten and dearly loves children. You can teach him all kinds of cute tricks, such as, to come when you whistle, stand with his front feet on a chair and many others. Didn't you ever notice what dandy times children have who own ponies and how pretty these cute little fellows look when trotting up the road? Everybody runs to the door and stops to look at a Shetland pony going by. If you think you would like to own **"Sultan,"** read the rest of this page carefully and then send us your name so we can tell you how you may get him.

WE WILL GIVE YOU OR SOME OTHER BOY OR GIRL THIS PONY WITH COMPLETE OUTFIT JUST AS IT LOOKS HERE



THE OUTFIT

And best of all we send free with **"Sultan"** the complete Pony Outfit just as you see it in the picture. Besides the Pony, the Pony Buggy and the Harness shown we send a Saddle and Bridle, which would make you the most complete outfit that money could buy. You could ride horse-back or take all your boy or girl friends driving everywhere. The Pony Wagon is just the most comfortable riding and easiest pulling we could buy for our purpose. We have given away so many that we know exactly what kind most boys and girls like. The handsome nickel trimmed harness looks just fine and the riding bridle is imported and the saddle which we also send we had made to order for **"Sultan."** No child, no matter how rich his parents may be, owns a nobbler or more desirable pony and outfit than this one which we shall send free with all freight and express charges paid. Read down below what some of our pony winners say about their ponies and outfits—how proud and happy they are—and see if it doesn't make you want one, too. This is surely the best chance you ever had to get a Shetland Pony, so if you haven't any and think you would like to have us give you **"Sultan,"** send your name and address to us right now so it will get to us quickly.

Send Us Your Name Today

If You Want to Own "Sultan"

As soon as we hear from you we will tell you how to become a contestant for "SULTAN." Notice we print the names and pictures of 4 of our 85 Lucky Pony Winners, which shows that we really do give away Live Shetland Ponies. Furthermore we will give you the names and addresses of any of our 85 Lucky Pony Winners that you ask for. The Webb Publishing Company publishes The Farmer's Wife and The Farmer. The banker or postmaster in your town knows we are one of the largest publishing houses in the United States, established for 30 years, so we can well afford to give Ponies to boys and girls to advertise our papers. And right here we want to tell you that we have a BIG SURPRISE for you that will DOUBLE YOUR CHANCES of winning a pony. We haven't room to explain it here, but we will tell you AS SOON AS WE HEAR FROM YOU. Remember, you can't win "SULTAN" till you send us your name, so sit down and write us at once. Don't miss this opportunity to get a dandy pony free.
